IT IS clearly the judgment of France and England tha state socialism affords an effective means of carrying o a great war. Both countries have gradually extended stat control over the activities of their subjects until, at pres ent, practically all such activities as directly affect th conduct of the war are pretty completely in the hands o the state. This is so generally accepted that a few week ago, when the British Government took over managemen of all the coal mines in England, the fact attracted onl perfunctory, matter-of-course notice.

Both countries are evidently well satisfied with th experiment; but its acceptability in normal times is a doubtful as ever.

If the problem before the United States was to see hov many tons of steel rails it could turn out in a given tim the country would, no doubt, do well to adopt state social ism. By suppressing all individual preferences, and ruth lessly directing every energy of the nation to one end, i could turn out more rails in a given time than by an other plan. But, in working out the problems that con front a democracy in normal times, comparatively fre play of individual choice and inclination has a considerabl value, even on the strictly economic side. A well-ordere state socialism would probably have "pinched" Alexande Graham Bell for fooling away valuable time in an attemp to transmit sound over a wire.

Even the material needs of a country at war are simpli fied and standardized. Its emotional and intellectual need are simplified and standardized to a greater degree. Lif all round tends to conform to the same pattern. So stat control is tolerable. When the dire pressure of war i removed the struggle for individual choice and expressio will return and the state will contract to something like it former dimensions. There will, no doubt, be higher organi zation of industry than before the war; but it will b voluntary.

UP AND DOWN

By the Author of Down and Up

MANY of us like to skim the last chapter of a book first, so that we may be sure of the "happy ending" before we start. Some canny authors, recognizing this trait of human nature, build their tales hind side foremost, to accommodate their readers. But my present story, though it is told backward, was not so recounted by my design. The Editor of THE SATURDAY EVENING POST asked me to prepare Down and Up, which was printed in the Christmas issue. In January he suggested that I write Up and Down. I have narrated previously how I climbed out of the depths; how, while in the penitentiary, I made my fountain pen a key and unlocked the barred gate to freedom and opportunity. Now I shall tell of my fall from the heights. Down and Up was the story of a hard, successful fight. This is a confession of the more desperate preceding struggle that ended in disgraceful failure.

No man with self-respect bares his shame proudly or flaunts it before his acquaintances. Rather, he would choose to bury his dishonor in oblivion among strangers. I should not have written Down and Up on my own initiative. I published my prison experience because the editor assured me it would encourage disheartened men and women. I have proof that my Christmas article accomplished its purpose. Hundreds of readers have thanked me for the message of inspiration. It was a tonic of hope that saved the life of a cripple who intended to kill himself the day the Old Year died. He told me in a letter that I had restored his grit. So, though now all the world knows I spent three years and a half in the penitentiary, and though there never can be an emollient of forgetfulness to soothe the smart of my memories, I am glad I wrote Down and Up.

The present story has a purpose too. It is much harder to confess utter failure than to admit the grinding discouragements that finally smoothed the way to success. I would prefer to blot out of my recollection this Chapter I, which in chronological order should have preceded the installment of my experience already told. But the editor has shown me that Up and Down is the complement of Down and Up—that it will help men and women to solve some difficult problems of living. Therefore, I make my confession of failure. But I would refuse to tell about it to-day if I were not earning a thousand dollars a month, and if I were not richer in friendships than I ever have been before. That's the happy ending. Now I'll start the story at the beginning. I had been practicing law in a big Western city about four years. Among my few clients was a little manufacturing company, owned jointly by two men. They had an irreconcilable business disagreement. Both were stubborn. Neither would yield. Thus deadlocked, the partners summoned me to their office. Each refused to sell out to the other; but one suggested that I buy his interest. I knew the concern had been profitable; yet I declined. I said I had no money.

A Proposal

THE partner who made the proposal was thoroughly disgusted with his experiences in association with the other member of the firm. He blurted out that he was "sick and tired" of the business. He offered to take a small sum in cash and to accept my notes for the balance of his share in the company. He knew I owned an equity in a store building. He asked only that I secure him as best I could by giving a second mortgage on the property.

As impulsively as he made the offer, I agreed to buy. We drew the contracts on the spot. Within an hour after I arrived at my client's office I was half owner of a shop in which were manufactured patented electrical specialties I knew practically nothing about, except that they had been selling at a good profit for several years. From boyhood I had a natural ineptitude for mechanics. I lacked even elemental training in electrical engineering. I never had been in business of any kind before. Yet, when I went home that night with the bill of sale in my pocket, I felt confident the door of opportunity had opened and that I was well started on the road to wealth.

I never had enjoyed the practice of law; probably because after four years at the bar I was making little more than enough money to live on. I had grown tired of being poor. Therefore, I closed my downtown office with no regrets and moved my desk to the factory.

Very soon I realized why my predecessor in the firm had been so willing to quit a business that was making him two hundred dollars a month. Eager as I was to get rich, and though the company prospered amazingly despite its handicaps, I should have been glad any day in the course of the next few weeks if I could have sold my half share at cost. My partner was the most exasperating man I ever knew. He had invented the specialty we manufactured. The device was crude; but he became obsessed by a delusion that he was the peer of Edison as an electrical wizard. His egotism in this respect would not have been so offensive, however, if he had not considered himself a Solomon. As a corollary he refused to concede the possibility that I had or ever might acquire any ideas worth listening to.

I spent two years in a hell of self-repression, humiliated continually by indignities. I recognized at the outset that I was ignorant of the business. I worked day and night educating myself. I had a cot in a corner of the office, and often slept there after spending eighteen or twenty hours consecutively in the shop and at my desk. I dug out the answers to the problems I encountered. Then, I soon found, I had to play courtier to the ignoramus, self-crowned king, and to feed him morsels of suggestion tactfully for the nutriment of a notion that he had discovered a new principle of business. My idea, when he had swallowed enough of the pabulum to feel that it was his own conception, would be tested triumphantly. Whereupon my partner would start downtown to buy himself a larger-sized hat.

The company was five years old when I purchased fifty per cent of the stock. But the sales were barely two thousand dollars a month. There were no "sales"—to be exact. Certain customers bought the patented device and recommended it to their neighbors. Slowly the number of names on the ledger increased. The inventor considered it a favor to ship goods to buyers. He peddled his wares from house to house originally, I suppose. But, after getting a few "repeat" orders, he sat back in complacence and waited for the world to come to his dinky office and push money under the door. Prior to my advent, his only concession to the merit of advertising was a bulky catalogue full of pictures and effusive encomiums of his great invention. His own name stuck out conspicuously on every page.

I wasn't looking for glory. I worked for results. I laughed to myself—maybe a little wryly—when my partner claimed all the credit for the improvements I suggested to him. But it galled me that the business was cramped by the necessity of letting him incubate and hatch "original" ideas I had learned were common practice in most factories and offices. I never could induce him to test magazine publicity. Nor was I able to dent his conviction that an accurate cost system was a waste of money. While he basked in the rising sun of affluence, I sweated over my study of office and factory methods, and devised indirect means of advertising our product and of ascertaining with certainty our margin of profit.

Nursing the Young Business

PERHAPS it was good for me to have to overcome the obstacles that stupidity and arrogance put in my way. I learned manufacturing and selling from experience. The business grew fast. I watched over its progress affectionately, as if it were a crippled, anæmic child I was curing of its deformity and nurturing to strength with the food it previously had been denied. There wasn't anything brilliant in my work. I made a lot of mistakes. But the concern that had been stunted for five years shot up in stature and became pretty big in twenty months. I was as proud as I should have been of a lusty boy of mine developing toward manhood. I had no children at home then. I loved my business as if it was my own flesh.

That heart affection for the company, engendered in the course of my early months as a manufacturer, many years later made me a thief. I stole finally because I loved my business so much I could not bear to let it starve. But when danger first threatened the company, after I had been a partner a little more than a year and a half, I fought in its defense with only the legitimate weapons of the law.

The business had grown fourfold in twenty months. Sales were about two thousand dollars a week. The self-conceit of my partner swelled until there was no room in his skull for even a small brain. I did not know then that the man was crazy; though later he was adjudged insane and committed to an asylum. The day I learned he had gone to our bank and surreptitiously checked out fifteen thousand dollars of the firm's money I had a receiver appointed at once to take charge of the company. Thereupon, without realizing it at the time, I jumped from the frying pan into the fire; for the receivership led to the formation of a new business association that eventually ruined me.

The receiver appointed by the judge was a big bank. The head of the trust department took charge of the factory and office. He immediately commenced to take an inventory and to audit the books. My partner floundered in court five or six times; then proposed through his attorney that I buy him out and end the litigation by a settlement. He offered to accept half of the inventory value of the tangible assets, plus half of the cash.

"At Your Old Tricks Again, Bill"

As the fellow already had sequestered nearly all our bank deposit, the balance necessary to get rid of him, if I should allow him to keep the money he had, amounted to only about five thousand dollars. I was very eager to make the deal. He would relinquish to me the old company name, which was more valuable than the machinery and stock. But I had no idea how I could get five thousand dollars. I never before had borrowed money. I realized that no bank was likely to loan so large a sum on my personal note, with the knowledge that a bitter competitor was about to contest with me for customers. I knew, too, that I must have more cash for operating purposes. I needed not five thousand dollars, but ten thousand.

I told the receiver my dilemma. By reason of his custody of the business for several weeks he was familiar with the profits that had been made. He knew the tangible assets were worth in excess of twenty thousand dollars. He offered to supply the five thousand I required to buy out my partner, Schmidt, if I would assign to him one-third of the capital stock in the reorganized company. Further, he agreed to secure the concern a bank loan of five thousand dollars with which to pay wages and expenses and to buy raw material.

The prospect of entering into another partnership was distasteful to me; but prolonged costly litigation was the alternative. I assented. I felt my new associate was driving a sharp bargain, but I reasoned that I should still own two-thirds of the company, which was a sixth more than I had in the old firm. True, my share now would be worth, not counting goodwill, only a little more than thirteen thousand dollars, instead of twenty thousand as it had been valued. But I considered freedom from Schmidt cheaply bought for the sum I was giving up.

My new partner was the antithesis of the man to whom I had been bound. He was keen, suave, well educated, and experienced in business. I felt rather proud of the office system I had installed, but he pointed out its many crudities and faults. He continued in his position as head of the trust department at the bank, yet directed all our company money matters through an accountant whom he put in charge of our books. I recognized my comparative ignorance of such work and very gladly resigned responsibility for the company's finances. I divided my energy about equally between shop superintendence and sales activities. I had learned how to handle men and the way to get customers. Office routine seemed to me relatively unimportant. There never had been any necessity before to spend much of my time on the bookkeeping. The profits of the old firm were so large that all we had to do to keep our bank account growing, prior to the receivership, was comprised in the collection of our accounts for goods sold.

Easy Borrowing

Previously to association with my new partner my experience in banking had been confined to drawing checks and making deposits. I no more should have thought of going to a banker for a big loan than I should have entertained the idea that any other stranger would advance me thousands of dollars without collateral security. I had practiced law in a small way, but I did not know that "commercial paper" actually included the unsecured notes of minor business men whose only assets were their little workshops and stores. It was astonishing to me that my accomplished partner secured our first borrowed five thousand dollars without giving a chattel mortgage on our factory. Equipped merely with a certified statement of our assets and liabilities, he discounted a company note, which only I had indorsed personally, at the bank where he was head of the trust department. I attributed the nonchalance with which the loan was made to his high standing in the financial world.

I was well aware that our company was about to enter upon a trade war with my first partner. I felt sure it would be a mistake to wait for competition, and that we should take the initiative ourselves. I prepared a prospectus of the business I believed we could get. I drew a schedule of approximate prices and costs, based on the larger quantities I was convinced might be sold. Then I laid my plans before my banker associate.

"It is to be expected," I declared, "that Schmidt's first move will be to cut prices. He will try to win over the old customers. It won't occur to him that twenty times as much new business can be developed. I propose that we get the credit with the trade for reducing quotations on the specialty. Thirty-five dollars a thousand should satisfy us; but Schmidt undoubtedly will meet and beat our figures, whatever we quote. Therefore, let's outwit him by cutting prices only to forty dollars a thousand now. He'll offer ten per cent better; that's the way his mind works. Then we'll just drop to his figure, and probably he won't slash again for a while.

"Thirty-six dollars a thousand means over one hundred per cent manufacturing profit. We'll make a lot of money if we spend our energies principally on broadening our list of customers. Even if Schmidt gets half of the old business, our sales will be ten times as big as his if we push out and grow in new directions while he's patting himself on the back because he has fifty per cent of the trade he knows about.

"We can buy mailing lists of all the concerns that are likely to handle or use such a specialty as we manufacture. Once we have a large volume of business, we'll make our goods cheaper than Schmidt can turn out his. It won't cost more than a thousand dollars to circularize and quote fifty thousand prospects. I say we should spend the money at once. If you agree with me we can begin sending out printed matter next week. I have the copy all prepared here. Look it over. Check up my cost estimates. I am sure you will second the motion."

A Policy of Expansion

My partner studied overnight the dossier I handed him. Next day he brought me his decision.

"I concur in your program," he told me crisply; "but it will involve our borrowing a great deal of money. Have you any plan for financing this expansion?"

"Why, the bigger the business we do, the more money we'll have!" I exclaimed. "It's always been that way since I bought my interest in the company."

"Yes," he smiled; "but your previous growth was gradual. Now you purpose to double the shipments in a few months. Don't forget, either, that the old firm received fifty dollars a thousand net. We're cutting the profits in two. It will take twice the quantity of output to make the same amount of money. Your theory is right. We should plan to build a large business based on the lower price and many-times-multiplied volume. But we shall have to go into debt pretty heavily to swing it."

I did not see he was right until he took out his pencil and jotted down some remarkably accurate figures on pay rolls, copper and expenses. He showed me, too, that with goods sold on sixty days' credit we should have to carry on our books so much of the anticipated profit that we might be cramped for cash, though highly prosperous. Reluctantly I abandoned my scheme.

"I suppose we'll have to go slowly, then," I surrendered to his figures.

"No," he countered, to my amazement. "The expansion is legitimate. I am in favor of it. I merely inquired whether or not you had any plans to raise the money. I'll agree to find it for us, provided you will let me buy another sixth interest in the business on the same basis as I purchased my present third. That would make me an equal owner with you."

"I don't understand," I responded. "Twenty-five hundred dollars more wouldn't be enough. Besides, that would be mine personally. You make it clear we might need twenty-five thousand."

Again he smiled.

"I hope we shall require twice, three times, that much before we attain our full growth. The more we owe, the more we shall be making."

"You intend to borrow all that money?" I cried.

"Yes. We'll be very desirable customers for our bank. We have a dull sales season once a year; so we can clean up our debts then, which will suit the bank. We'll be borrowing just to carry raw material, goods in process of manufacture, finished stock and accounts receivable. Our investments in additional machinery, tools and fixtures will be comparatively small. Our net worth now is ample security for another five thousand dollars. I am certain we shall have no difficulty in borrowing seventy-five per cent of any total we may have to carry in merchandise and accounts receivable."

Then I changed my mind. I was afraid of taking the risk of big debts. I felt I should be uncomfortable, even though the company were not actually in danger, if we owed twenty-five or thirty thousand dollars. I preferred the steady, safe growth to which I had been accustomed for a year and a half. I said so frankly.

My new partner made me feel like a timid schoolboy. He argued me out of my conservatism by proving in black and white that it was foolish. He was right. I acknowledge that now, as I did then. His reasoning was sound. There was no danger in what he proposed, *per se*. But if I had been stubborn that day I never should have gone to prison. I learned a great deal about finance in the course of the next ten years; but I paid dearly for my knowledge. I should be far richer in money and in self-respect to-day if I was still as ignorant of banking practices as I was in 1900. I could not see the future then. I agreed to my partner's program.

Our business increased as a result of my advertising campaign, just as I had counted on its doing. I never have known what amount Schmidt's competition subtracted from the total volume of sales of the specialty we both made; but the company in which I was half owner soon was shipping more than twice as many devices as we had sent out before the receivership. After the initial big bulge in our orders the growth was steady until the final disgraceful wreck.

As our reorganized business expanded in sales, its debts proportionately increased. The first year we made a fine record financially, however. When our dull season came we promptly reduced our working force and kept the manufactured stock and raw materials low. The three-months lull enabled us to collect our large accounts without putting much on our books. We marked time for ninety days in the shop. Before the end of that period of retrenchment we were able to pay all the money we had borrowed. We had a cash balance remaining of about four thousand dollars. As a result, we stood well with our bank.

I give the credit for this showing largely to my partner. He personally managed all our money matters, as treasurer of the company. At the end of our initial fiscal year he prepared a statement of our assets and liabilities, with a record of earnings, that secured a first-grade rating and a one-step-higher standing as a business concern. I was president of the corporation and thoroughly proud of my position in the business world. I entered the second year with optimism.

No personal friendliness had developed between my new partner and myself. He was a cold-blooded man and seemed to be all brain and no heart. We had nothing in common except our joint operations. We never visited each other's homes. I called him "Mister" and he invariably addressed me in the same way. I did not like him at all; but I admired him a great deal—then. And I appreciated the education in finance that I owed to him. He typified to me the successful, dignified business man. I was proud to be his partner.

The Cold-Weather Slump

Each month our expert accountant took a trial balance. We kept a card record of all stock, which was equivalent to an up-to-date inventory every day. Therefore, it was possible to determine once a month approximately what our net earnings had been. My partner was accustomed frequently to come over to the factory after banking hours. He then would study and compare the trial balances and the summaries he made from them. I never have known a man to whom figuring was such a delight. It seemed to me that he always thought with a pencil. He tabulated every idea we discussed. One day he sat down beside my desk with the comparative records of twelve months' operations.

"In December," he said, "our profits were barely six hundred dollars. January dropped to half that. In February we lost two hundred and fifty. Outside those three dull months we made an average of approximately twelve hundred dollars every thirty days. It would be pretty expensive to have such a slump every winter. We should manufacture something in addition to our present line that will sell fastest in cold weather. Then we'd straighten our sales curve instead of swooping down this way. Our shop might as well earn four or five thousand dollars more a year, with practically no extra expense."

It happened that several weeks befor we had been offered just such a device a he referred to. It was new, but looked goo to me. I had shown it to my partner and x- plained its merits. At the time he had o seemed enthusiastic, and I reported to h inventor that there wasn't much likelih o we should be interested in buying his pa n rights. Now, however, my partner o- posed that we make the purchase. It p peared to me that he advocated the adop n of the new line principally in order to b g December, January and February sale t the average level. I thought at the tim n was more interested in getting unif m monthly statements than in accomplish g any other purpose. He liked to figur a well as I enjoyed working out advertis g and selling campaigns.

The innovation proved a successful a ture in our business, though it cost c siderable money for new machinery i tools. And the stock required for m ing the device was entirely dissimilar the material we used in our original l of manufacture. We had to borrow m more heavily the second year than l been necessary previously. But I l grown used to being in debt. Notes had terrors for me any longer. We easily secu the loans we needed. I was entirely satisf with the situation. At the end of our n busy fall season, however, we did not sl down the shop. The demand for our n specialty was heaviest in the winter. worked on at top pressure.

New Lessons in Finance

As a correlative of the changed conditi we were not able that year to pay all debts. In October I was given another l son in finance, covering a branch of borr ing about which I then knew nothing. M partner reminded me that our bank wo expect us to "clean up," as we had done t fall before. A bank, he said, liked to hav borrower demonstrate ability to liquid his debts once a year.

"We can accomplish the desired effec he informed me, "by borrowing twen thousand dollars from a notebroker for thi or four months. I have made arrangemen for such a loan, in fact. It will cost us brokerage fee of only one-fourth of one p cent in addition to ordinary interest. paying up our note at the bank we sh maintain our standing there so well th they will gladly grant us our full discou line again the first of the year."

I remember now what a shock to me was to be reminded that the three-mont notes at the bank, which had been twi renewed for the same term, were expect to be taken up at the third maturit whether we had the money in hand or n I had grown accustomed to the idea th so long as our manufacturing operatio were profitable we need not worry abo our debts. Anxiously I requested my pa ner to elucidate the new method of finan ing that was to tide us over until we cou borrow again at the bank.

"It is very simple," he explained: "W make four of our company notes for fi thousand dollars each. They are to be pa able to the corporation's own order and i dorsed in blank by it. You and I also w indorse personally. The notes will bear s per cent interest. Our broker will buy the at their face, less one-quarter of one p cent brokerage. He will sell them to va ous out-of-town customers of his. Our ba will be none the wiser. Of course when t broker's paper falls due we shall have o regular discount line at the bank again, a will pay the notes as they mature."

"Do you mean to tell me," I asked, "th a broker will lend us twenty thousand d lars for three months and charge only fif dollars more than regular interest for t risk?"

My partner smiled at my unsophistic tion.

"The broker takes practically no risk he declared. "He knows that our busine rating will satisfy his clients. He does n indorse the paper. It all will be out of h hands within a week after he gives us h check. For every day he holds a note h will receive the six per cent interest hi self. He really makes a very handson profit."

Then he told me that millions of dolla were borrowed constantly in this mann by well-rated concerns. I perceived th the brokers were performing an entire legitimate function. I learned afterwa they were men of the very highest standi

(Continued on Page 65)

"It's a meal in itself!"

That is what thousands of people say about *Campbell's Vegetable Soup.* And in truth this popular food-product contains practically every element of a nourishing and satisfying repast.

The strengthening juices of good meat, the tissue-building properties of choice vegetables and sustaining cereals, the pleasing flavor of fresh herbs and delicate spices—they are all temptingly combined in this delicious soup.

And it is all ready for your table in three minutes. It saves you the time and trouble of marketing. It does away with the work of preparing materials and cooking them. It cuts down your fuel-cost.

We use thirty-two separate ingredients in

Campbell's Vegetable Soup

The strong full-bodied stock we make from selected beef. And this stock also contains the nutritious marrow of the bones.

We use the best Maine-grown white potatoes and Jersey sweet potatoes, fine big yellow turnips, Chantenay carrots—red and tender all through, "baby" lima beans, small peas, green okra, tomatoes, celery and the juicy "Country Gentleman" corn.

We add rice, barley and "alphabet" macaroni. And we give a final snappy touch with little white leek and sweet red peppers.

You never tasted a dish more appetizing and wholesome.

Good soup is a most important and valuable food. It is a positive necessity if you want to maintain a properly-balanced diet. And it should be eaten once every day at least. Your physician will endorse this statement.

The busiest housewife can follow this rule with no extra labor, no fussing, no delay. Simply keep a supply of these tempting Campbell "kinds" at hand on your pantry shelf, and get the enjoyment of them as regularly as the day comes round.

"There's Just Two Hundred and Thirty-Five Shares Between Us Now, Useless"

USELESS ARBURY sat on the stomach of a large policeman, one knee on each wrist, and his left hand pushing downward vigorously on the officer's face to hold him quiescent, while with his right hand he struggled to unpin the nickel shield of office from the blue coat. Useless was adding to his collection.

It was a collection of which Useless was quite proud, even when he was perfectly sober, which was generally. It consisted of fourteen policemen's badges from as many cities, and of no less than eleven stars bearing such designations as Town Marshal, Village Constable, and the like. Now Useless was putting the crown to his collection by adding to it a badge from his home city. He intended this to be his last; for college was over, a year of travel in Europe was done with, and it was his excellent resolution to settle down and—possibly—to go to work.

Now one cannot place a policeman on his back, sit on him and deprive him of the insignia of his calling without attracting attention—more especially is this so if he chooses for the scene of his activity the shadow of Governor Bagley's bust on Detroit's Campus Martius—even if the hour be one o'clock in the morning. Useless had an audience with astonishing quickness.

Now, as anybody knows, sudden crowds attract guardians of the peace. Useless had scarcely made sure of the recumbent officer's badge when two more of his tribe and nation appeared; and Useless found himself with more on his hands than he could well perform.

When he looked up into those two new officers' faces he rose to his feet.

"Your friend," he said graciously, "is a trifle mussed, but otherwise as good as new. You needn't have troubled yourselves to come. I was ready to get off him, anyhow."

Indignant official hands fell upon him, to which he surrendered himself good-naturedly; and he was propelled to a signal box, the admiring crowd tailing him and waiting jovially to see the patrol wagon arrive.

Useless was not intoxicated in the sense in which old ladies and temperance orators understand that word. He never became so; and it was not frequently that he became as he was this morning—"mildly irritated," as he called it. No; he was not even a good, industrious drunkard. He fell short of success at that, just as he had failed as a student and as a polite traveler. His father had named him Ulysses; a fully appreciative undergraduate body had changed this to the perfectly descriptive Useless, and had loved him as all mankind seemed compelled to love him—though it could not admire.

He had been only a sub on the football team, though it was admitted by critics that he could have been an All-American tackle had he stirred himself. The only point at which he touched success was in becoming humorously riotous on a surprisingly small ration of intoxicating liquor. And, because of this, his name had figured in the public prints of divers cities.

The desk sergeant scowled at the beaming Useless.

"What for?" he asked the patrolman.

"Assaultin' an officer."

"Huh! . . . I've heard of you, Arbury, and that collection of badges of yours."

"Thank you," said Useless. "It's a little thing, but unique."

"No use lockin' you up; but what I'll do to you'll be worse'n lockin' up. Accordin' to accounts, your dad's tired of your cuttin' up, and I'll make him more tired. Call them reporters down."

Next morning at breakfast Lucius Arbury found himself referred to on the front pages of both newspapers. He faced an excellent likeness of his son and read spirited accounts of the night's adventure. Lucius was a man who remembered not the days of his youth; so he smote the table and vowed a vow much to his son's disadvantage. Also, he said to the butler:

"When my son comes down—if he ever does—tell him to be at my office at ten-thirty."

That was all; but when Useless received the message he recognized it as a command it would be exceedingly unwise to disobey. He was prompt—indeed, a little beforehand—at the office, and made his way past office boys and buffers to his father's door.

"You can't go in, Mr. Arbury," said the ultimate guard. "Your father is engaged."

Useless grinned down at the man.

"He told me to be there at ten-thirty; and there I'll be," he said, and walked in.

His father was engaged in conversation with a large bald gentleman, who immediately ceased speaking when Useless entered. His father scowled, and jerked his thumb toward a chair.

"Sit down there and keep quiet," he said; then to the bald gentleman: "Go on! Never mind him. It's just my son, and he doesn't understand business English—barroom English is his limit."

"I'd hate to have this leak out."

"No danger! Go ahead, Porter."

"Well, as I was saying, I've bought about fifty thousand acres of spruce near Hermit Notch, in New Hampshire; bought it quietly. Yesterday I let the contract for building a pulp mill. Cost me about four hundred thousand for mill and machinery. She'll be running in seven months, and there'll be a lovely thing in it. At present prices I'll pay for the mill in a little over a year. But present prices aren't a starter.

"Sulphate pulp is going up to seventy-five dollars a ton before the year's over—maybe higher. I'll manufacture a minimum of seventy-five tons a day, and every ton contracted for at the market."

"How about shipping facilities?"

"Not the best. We're stuck with an arbitrary over a short haul to the main line—about six cents a hundred; but we get a good rate to New York and Boston. Minimum carload twenty-four thousand pounds; so we'll be shipping six or seven cars a day."

"Going to hog it, of course!" said Mr. Arbury with a grin. "I'll take any part of it up to fifty per cent."

"Nix! But you can handle the bond issue if you want to. It'll be a short-time one, though. We'll be taking it up in a year."

"Here's a check for ten thousand dollars. I can't turn you loose without a cent, for I haven't raised you so you could earn a living. That's my fault, and I acknowledge it—so I fine myself ten thousand dollars. It's all you get. You can blow it or you can wake up and use it to earn more for you. It's up to you. But when it's gone don't come back to me. There'll be nothing doing. Don't come back to me at all. I'm through with you. It hurts my pride every time I think of you. You're no good! . . . I never want to see you again unless you can come back here with fifty thousand dollars instead of ten. If you can do that we'll wipe out what's happened and you can come into this business. Now get out!"

Useless took the check and rose to his feet. He made no protest, no plea for lenience. All he said was:

"Honest, dad, I had no idea I was being as rotten as this!"

He went out and cashed his check. Added to the four hundred-odd dollars he already had, the ten one-thousand-dollar bills gave him quite an opulent sensation. At first he considered how to begin his new career—whether it should be by becoming "mildly irritated" again; and decided against that course. As he stood debating, a young woman came out of the bank and prepared to enter a waiting electric; but at sight of him she paused.

"Useless!" she called.

He turned quickly, and a smile, such as only young men whose affections are in a certain seething state can exhibit at sight of the cause of the cardiac disturbance, beamed upon her.

"Hello, Ruth!" he said; and when he was at her side: "I love you more than I did yesterday at this hour. I just felt my pulse to see."

"Shucks!" she said.

"But I've got to withdraw my offer of marriage—temporarily, anyhow."

"What is it?" she asked, instantly concerned. "Have you had a row with your father?"

"No row. He just handed me a check for ten thousand and said good-by forever."

"On account of last night?"

"Everybody reads the papers," he complained.

"Really I oughtn't to be seen talking to such a notorious character. It's very compromising to be seen with a man who gets drunk and tries to kill innocent policemen."

"I'm no booze fighter, Ruth; and you know it."

"If you were I shouldn't be talking to you," she said. "Tell me what your father said."

"Mainly that I was no good, and never to come back until I had turned his ten thousand into fifty thousand. He might as well have told me to turn it into fairy carpets or dodo birds."

(Continued on Page 33)

The New Hupmobile

The Year's High Mark For Beauty

This new Hupmobile is a year ahead in beauty. Its equal, we believe, will not appear this season. It sets the year's high mark.

From its earliest days the Hupmobile has held first place for value. Later, against the field of multi-cylinders, it won performance laurels. Now it leads in beauty, too.

But it is more than the year-ahead beauty-car. It brings you all the old-time Hupmobile goodness. It has not gained style at the expense of quality.

That would have been the easy way—to cheapen inner quality for outer beauty. But we did not take that way.

The Way We Pay For Extra Beauty

Instead, we built and equipped new factories. We put almost another million into added buildings and machinery. We cut down the overhead. We increased production to spread the cost of extra beauty.

Perhaps no other car is watched like the Hupmobile. As the world's best four, it is subjected to the severest scrutiny.

Makers of other cars, and other types, watch it. Other owners and dealers watch it. Our own owners, proud of their cars, watch it too; but in a different spirit.

It is always in the lime-light, everywhere. Because it is a four. And because it outperforms not only other fours, but other types, the impulse to criticise is intensified a thousandfold.

A Quality Car Since The First

So, if the Hupmobile is to hold its place, we dare not build it less good. That consideration aside, its quality reputation guards against any temptation we might feel.

Other manufacturers tell us we put too much money into hidden things.

They point out that our motor is worthy of a $3,000 car. That our rear axle, clutch, transmission, etc., are better than expected in a car of our class.

But we prefer to err on the side of quality. We prefer to give too much rather than too little. We cannot lower standards that have stood since the first Hupmobiles were built.

Some men buy a car for its beauty. Some for its quality. But all men want performance. They want their cars to do as well as any on the road; better if possible.

You get all three in the new Hupmobile. It is the year-ahead beauty-car. Comparison will convince you of this. Its quality and its value are recognized the world over. Its performance has been proved in every part of the country.

Four Years' Work In Four Months

The whole nation witnessed its prowess in its Capital-to-Capital Tour. This meant four years of ordinary service in four months. It meant a new trail from Washington to the capital of every state, and back to Washington.

It meant mud and mountain-climbing. Desert heat and zero cold. Snow-drifts and January rains. The Hupmobile "did its bit" on schedule time — in four months, 20,000 miles of the hardest touring this country can offer.

An absorbing story of this Titan of endurance tests is yours for the asking.

Hupp Motor Car Corporation
Detroit, Michigan

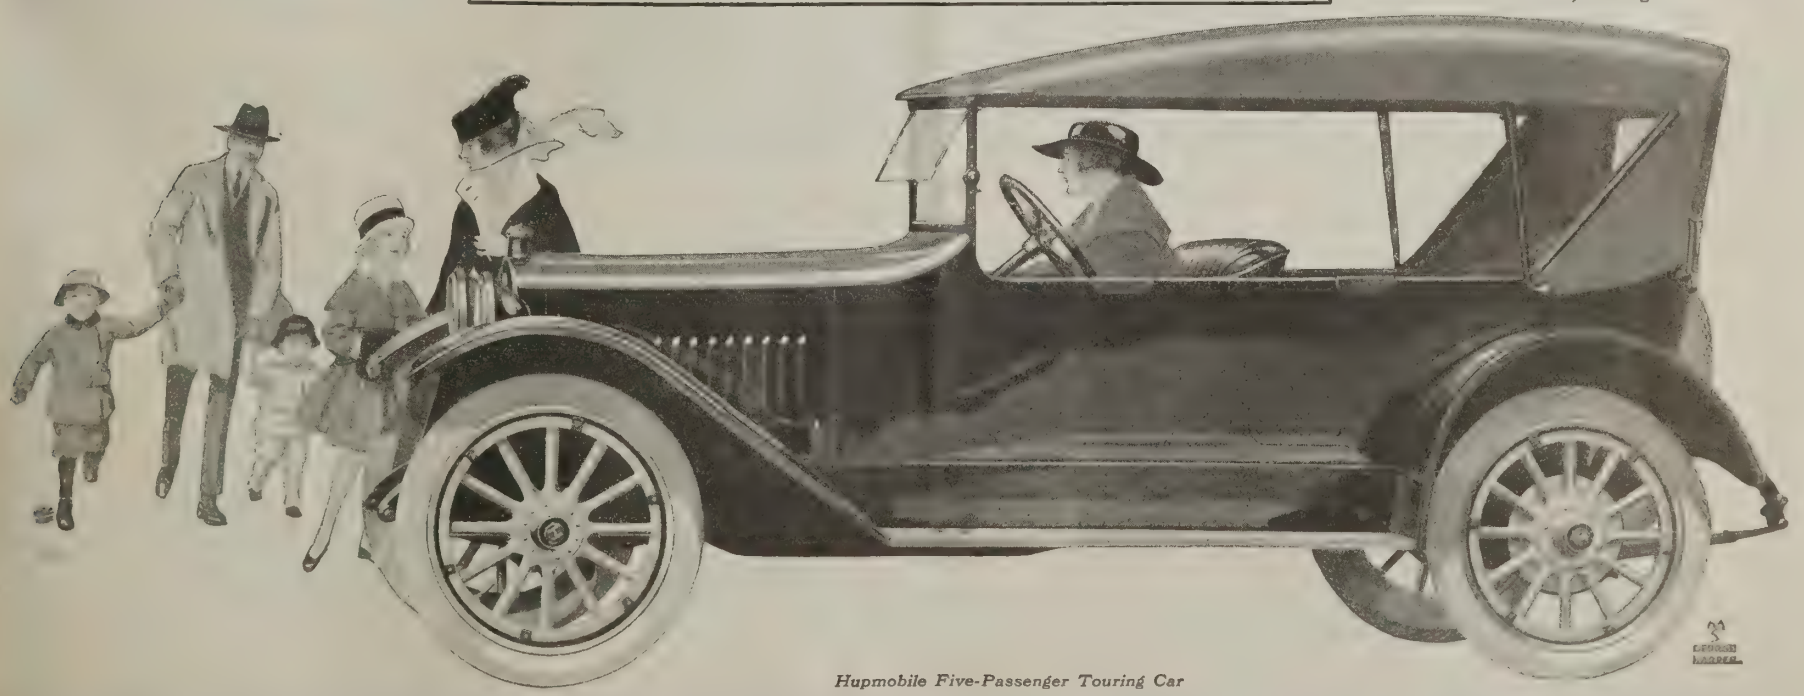
The Mark of Superior H *Motor Car Service*

An Index to the New Style Features

- Bright finish, long grain, French seam upholstery
- Improved cushions and lace type back springs in seats
- Leather-covered molding finish along edges of upholstery
- Neverleek top, black outside, tan inside—waterproof
- Tonneau gipsy quarter curtains, integral with top
- Front and rear edges of top finished with leather-covered molding with aluminum ferrule tips
- Bow spreaders to carry top when folded
- Hupmobile-Bishop door-curtain carriers, folding with curtains—exclusive feature
- Bright leather hand grip-pads on doors
- Large door pockets with special weighted flaps
- Body a new color—Hupmobile blue
- New variable dimming device graduates brilliance of headlights
- Tail lamp operates independently of other lamps
- New soft operating clutch

Six Models

Five-passenger Touring Car; Seven-passenger Touring Car; Year-'Round Touring Car; Roadster; Sedan; Year-'Round Coupé



Hupmobile Five-Passenger Touring Car

A New Barrett Roofing

Manufactured in strips 32¼ inches long by 10 inches wide, with self-spacing cut-outs 4 inches deep by ½ inch wide.

It provides not less than double thickness over every part of the roof except cut-outs, and triple thickness where the wear is heaviest.

Everlastic Multi-Shingles

Here's the latest thing in roofings—Everlastic Multi-Shingles, handsome, durable, economical, fire-resisting.

It is the logical successor to the good old-fashioned shingles that everybody loved.

But ordinary shingles have been going up in price and, in many cases, down in quality and something better had to be found.

Made in Colors

Everlastic Multi-Shingles are made on a heavy, waterproof felt base with genuine crushed slate on the surface, red or green as you prefer, and as these are the natural colors of the slate used, they will never change.

The "4-in-1 Roofing"

We call Everlastic Multi-Shingles "The 4-in-1 Roofing," and obviously this strip form of *four shingles in one* is a great saver of both time and money.

As compared with ordinary shingles, they are easier to lay, far more beautiful to look at, free from cracks and, of great importance, offer real *fire protection.*

Everlastic Multi-Shingles are packed in cartons, each containing sufficient shingles to cover 50 square feet of roof.

Everlastic Tylike-Shingles

These are regular slate-surfaced shingles, made of the same material as the Everlastic Multi-Shingle, size 8 x 12¾ inches. They have been a favorite roofing for many years in all parts of the country.

A charming roof or siding for any building that will long outlast most other kinds of roofing. Easy to lay; will not split or curl; red or green as you prefer.

Everlastic Slate-Surfaced Roofing

The same material as above, but in rolls 32 inches wide and 40 feet 6 inches long. Everlastic Slate-Surfaced Roofing makes a beautiful roof and requires no painting.

Also used for lining valleys, covering ridge-poles, etc., when Everlastic Multi-Shingles or Tylike-Shingles are used.

Everlastic Rubber Roofing

This is our most popular "rubber" roofing and is made of the very best grade of waterproofed felt. Light in weight, easy to handle and, wherever this character of roofing is desired, you cannot make a better selection than Everlastic.

It comes in one-, two- and three-ply weights, each roll containing enough to cover 100 square feet of roof. Nails and cement packed in each roll.

Free Booklet

If your dealer does not carry Everlastic Roofings, write us and we will send you illustrated folder telling more about them and advising you where they can be purchased.

Some Barrett Specialties

Everjet Elastic Paint

The best and most economical paint made for "rubber" and metal roofings, and exposed surfaces of all kinds. It is elastic, adhesive and will not rub, crack or peel.

Elastigum Waterproof Cement

Wherever there is a leak you need Elastigum. It has a hundred different uses. Just the thing for joining and relining gutters and flashings around chimneys. It is easy to apply, is acid-proof, dampproof and *it sticks.*

Carbosota Creosote Oil

You can add many years to the life of all exposed woodwork by using Carbosota Grade-One Creosote Oil. Being in liquid form it is easily applied. No expensive method required.

Creonoid

Creonoid Lice Destroyer and Cow Spray will keep your live stock free from annoyance by insects, flies, lice and vermin. It helps to make healthy horses, contented cows and clean poultry. Use Creonoid in the barn and in poultry-house and you will have more milk and eggs.

Booklets regarding any of these products free upon request.

TRADE B MARK

(Continued from Page 30)

"Get in," she said, motioning toward the electric. "You and I are going to talk things over."

As they drove out the avenue she had little to say; but presently she slowed the machine down to scarcely perceptible motion, and began.

"You've been making love to me since we were kids," she said; "and I've liked it. . . . Yes, I have. I've always intended to marry you when I got ready, though you've done a lot to make it hard for me to keep on wanting to. But I know you pretty well, Useless, and I know it isn't bad in you that keeps cropping out—it's just boy! Now it's up to you to be a man. If you are one I'll marry you as soon as you prove it. If you can't prove it—why, that's the end of it."

"How'll I prove it, Ruth? Lick Jess Willard or go over Niagara in a barrel, or what?"

"Bring back that fifty thousand dollars to your father."

"Aw, Ruth!" he said boyishly.

"And I'll help you," she added.

"That's better. You've got more brains than dad."

"It's easy to make money if you just get the idea."

"Sure! There was a man in dad's office this morning telling how he was going to clean up something like half a million in a year."

"How? Maybe there's a hint for us in it."

The "us," as she spoke it, sounded very sweet and homelike to Useless. He told her everything he could remember.

"Hum! . . . It wouldn't be fair to use that information in any way that could interfere with Mr. Porter's plans. But isn't there some side issue that we could get some money out of? Let me see! . . . I was at Hermit's Notch for a couple of weeks when I was going to Smith, and drove all round there. There's that dinky little railroad. How will this mill affect that?"

"It will give it about six carloads more freight every day than it had before. That's outgoing freight. There'll be a lot coming in too. And at six cents a hundred pounds that will amount to a lot every year."

"People up there say that railroad never pays a cent of dividends," she said reflectively. "I remember Mr. Whipple happened to say one day that he had a dozen shares he'd be glad to sell mighty cheap."

"I couldn't buy many railroad shares with ten thousand dollars," said Useless.

"No; but if we can figure out where that railroad is going to pay, and pay big, you can get a lot of options on shares with that amount. Pretty nearly all there are, I expect. You'd have to keep it awfully quiet and get them before folks found out anything about these mills."

"Sure!" said he, catching the idea quickly. "And then sell my options to somebody at a nice profit. I see!"

"Useless, if I were you I'd take the first train down there and find out all I could about that railroad and who owns the stock, and how much they'll sell it for. Then, if it looks all right, we can go after it. You could take the flyer this afternoon."

"Whee! But you're some hustler!"

"Because I want you to—to prove you're not what your father thinks you are."

"And if I prove it, Ruth?"

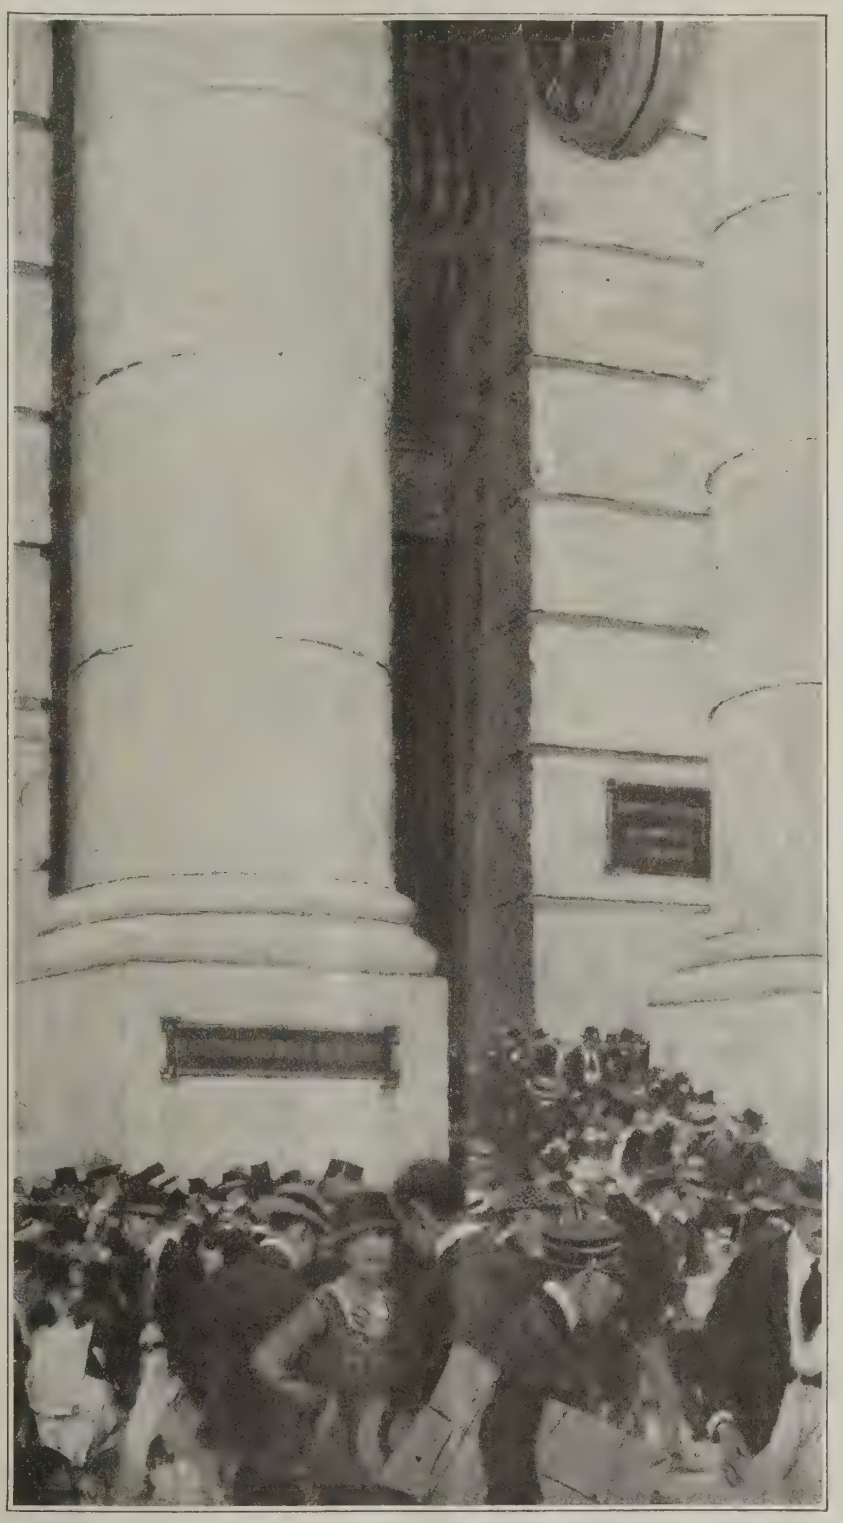
"You call on me the day you have made fifty thousand dollars and I'll tell you exactly what day we'll be married; and—and—here's a kiss to bind the bargain."

The next morning Useless Arbury got off the train at Albany, with his ten one-thousand-dollar bills. That night found him in Hermit's Notch, the northern terminal of the Hermit's Notch and Southern Railroad—a railroad consisting of twenty-odd miles of rails, with stops at five ramshackle stations.

It was an unpromising-looking affair; but even Useless could see that it ran through a richly timbered country, and that those hundreds of millions of feet of spruce and hardwood must come down over those rusty rails, if they came at all. The sight of miles of mountains, made beautiful by close-growing timber, stirred Useless' heart with encouragement.

Useless' first care was to find a room. He did not want to go to the hotel, where too many persons might be inquisitive as to his business; so he made courteous inquiries at the post office and was directed to the house of Mr. Vanner, which turned out to be a very pleasant place indeed, and a fortunate location for Useless—fortunate because he was blessed with that bearing which charms oldish ladies, and so entered into Mrs. Vanner's good graces.

To his surprise his host proved to be none other than the president of the local bank and a man of means and standing in the locality. There are places on the face of the earth where to rent a room or take a boarder is to flaunt oneself as of an inferior social caste. This is not true of Hermit's Notch. There the first families rent their spare rooms as casually and as clear of conscience as your New York landlord rents his apartments for a bagatelle of twenty-five thousand dollars a year. Hermit's Notch regards a spare room as an asset and promptly realizes what it can upon it.



"Ruth, I Love You More Than I Did Yesterday at This Hour. I Just Felt My Pulse to See"

Useless made an excellent first impression on the Vanners; but when, in the morning, he walked to the bank with Mr. Vanner and deposited ten one-thousand-dollar bills they were ready to make him one of the family. Mrs. Vanner took him under her wing, and by word and action stood sponsor for him in the village; so that, as it were, he found his place all made for him there, and did not have to labor through long weeks to pierce the New England crust of the inhabitants to a degree where they would admit to him, on question, that it was a pleasant morning.

To get information about the railroad was now the business of the day, and Useless found it not difficult. Indeed, any citizen he met seemed willing—nay, anxious—to talk about that enterprise; and before two days were over Useless was in possession of so much contradictory, conflicting information about the road that his head whirled. That evening he mentioned it casually to Mr. Vanner.

"This is a queer little railroad you have," he said. "Is it owned locally?"

"Queer! I calc'late 'tis queer! Couldn't git along without it now't we got it; but it's all-fired tryin' at times. Owned local, did you say? Perty much so. Built along about twenty year ago as a loggin' road by the Buttons, that opened up this valley. Then they run it through to Hermit's Notch and broad-gauged it; and, jest to git folks int'rested—so they said—they up and sold most of the stock in it to local parties. And when they come to die the rest of the stock got took up here and there—mostly because them that bought thought it was for the public good. Hain't nobody got a majority, and there's more lots of ten or twenty or fifty shares than there is of more. I got a hundred myself that I'd be willin' to let go of cheap."

"Doesn't the road pay?"

"Wait! I'll show you the last report got out by the treasurer."

This was unlooked-for good luck. The report was full and conclusive. It showed approximately what Useless had hoped it would show—namely, that there had not been a dividend declared since the road was built. The capitalization was seven hundred and fifty thousand dollars, or seventy-five hundred shares of one hundred dollars each. The greatest profit the road had shown was six thousand four hundred and twenty dollars and thirty-one cents.

It amounted to this: that the road was free of debts, of bond issues, and the like; that it paid its own way, and earned a trifle. To Useless' way of thinking, it was in a position to show a satisfactory rate of earnings—if it could get more business; in fact, it appeared to him that every dollar's additional business the road got now would be a dollar added to the profit side of the ledger.

Again he figured over what the coming of the pulp mill would mean to that road. Using reasonable conservatism, he judged it would increase the earnings not less than thirty-five thousand dollars a year, which would mean five per cent dividends. It would do more than that; it would stimulate the valley, add to the passenger traffic—possibly call in new industries. But a railroad capable of paying five per cent dividends on a full capitalization, that could be bought for forty cents on the dollar, looked like a real investment. There are comparatively few nine or ten per cent paying investments of that solid character.

"What is the stock quoted at now, Mr. Vanner?" he asked.

"'Tain't quoted exactly; but most of it could be bought for a lot less'n it cost. I know dummed well I'd jump at the chance of takin' forty dollars a share for mine."

"Do you think others would feel the same way?"

"Some might let it go for less."

"It seems to me it might be made to pay."

"Can't see it."

"Tell you what I'll do, Mr. Vanner: I'll give you a hundred dollars for a three-month option on your stock at forty. Of course this is confidential. It looks to me as if something could be done with this road, and I'd like to try, if I can pick up enough stock to make it worth while."

"'Tain't a fair deal to you, young feller."

"I'll take the chances of that. I wonder if I can get other blocks of stock on similar options?"

Mr. Vanner laughed.

"You bet you can! Understandin' bein' that if you didn't take the stock at the end of three months we could keep the money you paid down?"

"Yes."

"Seems like cheatin' you."

"Well, I'd like to see what I can do. How much stock is owned in town?"

"Maybe a quarter of it—in the township and surroundin' country."

"Can you give me a list of the owners?"

Mr. Vanner could; and the next day Useless, driven by Mr. Vanner, started out to call on them. Vanner introduced him and helped matters along by admitting that he himself had accepted Useless' proposition. When they got home at night Useless held options on twelve hundred and twenty shares, costing him one dollar a share.

"I hate to see you doin' this. You're throwin' your money away," said Mr. Vanner.

LIFT OFF CORNS WITH THE FINGERS!

A Few Drops of FREEZONE Loosen Corns or Calluses So They Lift Off.

GENUINE Freezone is only sold in these small bottles with glass rod applier. Each bottle is packed in a round wood case bearing the name.

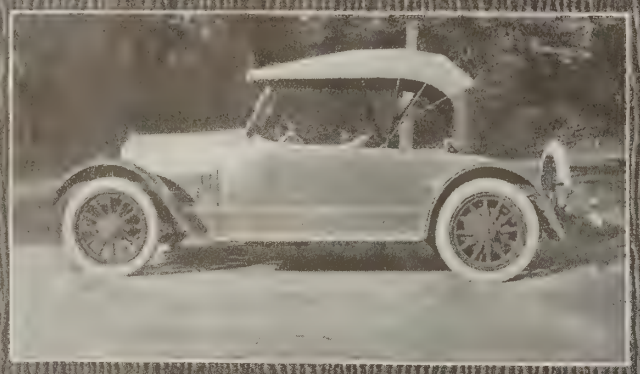
HERE is a mighty simple and easy way to get rid of your corns and calluses. Apply a few drops of Freezone directly upon a tender aching corn or a callus. It dries immediately. The corn-pain is relieved. The corn or callus then begins to dry up and shortly it can be peeled off with fingers.

FREEZONE

doesn't irritate or inflame the surrounding skin or flesh. You feel no pain or soreness while applying Freezone or afterwards. You'll like it immensely. Women who wear high-heeled footwear will appreciate Freezone. Keep a tiny bottle on your dresser and never let your corns ache twice.

FREEZONE CAN BE OBTAINED FROM ANY DRUG STORE IN THE U. S. AND CANADA

The Edward Wesley Company, Cincinnati, Ohio



NEVERLEEK TOPMATERIAL

NEVERLEEK has become the standardized top material. Its quality is beyond question. As an accompaniment and aid to style design, it is the natural selection of those motor car manufacturers who are constantly setting new standards of grace and beauty. 44 makes of high-grade cars are now advertised as "equipped with Neverleek Top."

Ask for Neverleek on *your* new car.

F. S. Carr Company, Boston and Detroit

"Maybe I am; but if I'm not I'll see to it that you make as much money a share on your hundred shares as I do on what I buy. That's fair. You've helped me a lot."

"Blessed if I can see what you're up to!" said Vanner. "But I calc'late you know your own business best."

It looked like smooth sailing. Useless wanted at least fifty-one per cent of the stock, and as much more than that as he could get control of; but fifty-one per cent was essential to the success of his plan. He must have for sale the control of the road, for that would add many thousands of dollars to the value of the investment. Indeed, without control it was more than possible he would lose every dollar he put into the options, and be left flat without a nest egg. To be left flat meant not only losing his chance of regaining his father's confidence, but also losing Ruth. That was what counted. He was fighting for Ruth. He liked to feel that. And nightly he sat down to write her long, hopeful letters, reporting progress.

In a week he found himself with options for twenty-nine hundred and eighty shares. Fifty-one per cent would require thirty-eight hundred and twenty-five shares; so he had eight hundred and forty-five shares yet to acquire before safety was achieved.

It seemed too good to be true. It had been so easy—and he owed it all to Ruth! She had furnished the brains; he had done nothing but carry out her idea. She, without doubt, was a wife well worth serving for—even the seven years required of the Hebrew patriarch.

On Monday Useless went alone to Cairo, the town at the opposite end of the line. The first stockholder he approached there was Titus Goodleather, postmaster.

"Mr. Goodleather," said Useless, after preliminary conversation, "I understand you own twenty shares of the Hermit Notch Railroad."

"You understand wrong," said Titus. "I did own them shares; but I don't. Say, young feller, what's happenin' to that railroad, anyhow? Folks seems to be gittin' int'rested in it. You're the second—which accounts for my not ownin' the stock. Sold it the day before yesterday to a feller from Detroit. Yes, sir. Broker, he says he was; and he give me forty-one dollars a share, cash. Says he was buyin' for a client in Detroit named Arbury, who was figgerin' on livin' here, or somethin', and wanted a few shares in the railroad, jest to keep him int'rested in local matters."

A feller from Detroit named Arbury! Useless sat down suddenly, chilled. There could be but one man named Arbury, from Detroit, who conceivably could have an interest in this railroad; and that was his father. Swiftly Useless reached a true judgment of the facts. Just as Ruth had instantly seen the possibilities in this railroad upon the coming of the pulp mill, so Lucius Arbury had seen them, and as promptly he had set out to get the road. Furthermore, he had set out to get it with millions of dollars, while Useless had but ten thousand. If it came to a race and a fight for the control Useless felt hopelessly handicapped at the start.

Knowing his father's shrewdness as he did, he felt that he might have known Lucius Arbury would let no such opportunity as this slip through his fingers.

From Titus Goodleather, Useless went to a dozen other stockholders, all of whom had parted with their stock. His father's broker had cleaned out Cairo with commendable thoroughness, and now, to Useless' knowledge, had possession of twenty-one hundred and thirty shares.

He hired a man to drive him to Memphis, and there found himself in town with his opponent. One man he called on had, but half an hour before, parted with his stock. This put Useless on his mettle. He hurried as he had never hurried before, jumping to the remotest stockholder on his list—and found himself first on the ground. There he acquired twenty shares. As he rushed to the next man on his list he wondered whether his father's broker was aware of his activities. The event proved he was not. Three more stockholders Useless saw in succession and gathered in seventy shares more. Then he and the broker must have passed each other on the way, for the next man was still counting over the money he had taken for his certificates.

Useless thought a moment. To delay in Memphis was dangerous. He might pick up an odd block of stock; but while he did so the broker might be getting to the next town and gathering in a thousand shares. Therefore, Useless hired another buggy and set out, at the most rapid pace he could persuade his driver to attain, for Moab still lacking seven hundred and fifty-five shares of his objective.

The drive gave Useless a chance to think; and as he considered the situation—that he was opposing his own father in this transaction—he recognized it as an opportunity greater than reason would have permitted him to expect. His father despised him; declared him worthless. Well, he was entered against his father, playing the game against Lucius Arbury; and if he could win, if he could beat his father on his own ground, then the old financier would indeed be compelled to eat his words. And Ruth would be proud of him, for the battle was now in his hands. Hers had been the idea, but the execution must be his. To win would mean the accomplishment of a feat that would make him worthy of Ruth's admiration. That would be better than winning the fifty thousand dollars demanded by his father.

Useless' list of stockholders showed that there were some five hundred shares owned in Moab, all in cats and dogs except one—considerable, for that locality—block of a hundred and twenty-five shares, held by an individual named Septimus Dean. The largest block owned by an individual was a thousand shares, in the hands of a man named Whitter, in Boston. If Useless could get that thousand shares the battle would be over; but to go to Boston would take time.

He stopped, however, at the Moab telegraph office and wired Whitter, asking an immediate reply. Then he hurried out to Septimus Dean's, and there he encountered difficulties for the first time.

"Want my railroad stock, eh? What fur?" Dean asked sharply.

"Because I think something can be made of the road, and I want to get enough stock in my hands to give me a chance to try," Useless said.

"Um! . . . Feel like you do, and I calc'late I'll play your game. Guess I'll hang on and take what profit you make out of it for me."

"If I can't get the stock there'll be no profit for anybody. It's never paid you a cent, and I'm ready to take it off your hands."

"What price?"

"Forty."

"If it's worth forty to you it's worth forty to me," said Septimus cannily; "and, besides, I don't like this here option notion of your'n. If I was to sell, it would be for spot cash—and not for forty, neither."

"For what, then?" asked Useless.

"Fifty," said Septimus.

"I'll tell you what I'll do," said Useless: "I'll give you fifty-five if you'll let me handle it my way on an option." He looked through the window and saw a buggy stop at the door and a man alight who was not indigenous to that soil. Instinctively he knew it was his father's broker. "That's my final offer," he said. "In a year you'll wish you had taken forty. Now then, Mr. Dean, is it fifty-five on option, or nothing? Quick! I mean business."

The old fellow scrutinized Useless closely, appeared to make up his mind the young man meant what he said, and shrugged his shoulders.

"It's a go!" he said, and went to fetch his certificate.

When he came back a second visitor was in the hall waiting.

"Sign here!" said Useless, extending the option form; and the name was scrawled on its dotted line.

Useless paid over the money and heaved a sigh of relief.

"Don't mind sayin', young feller, that you're a speedy trader. If you'd 'a' hung on you'd 'a' got it for fifty or less."

Septimus smiled a triumphant smile.

"And," said Useless, answering grin with grin, "I don't mind telling you that if you had held on till you got to see the man who's waiting in the hall you might have got seventy-five—cash!"

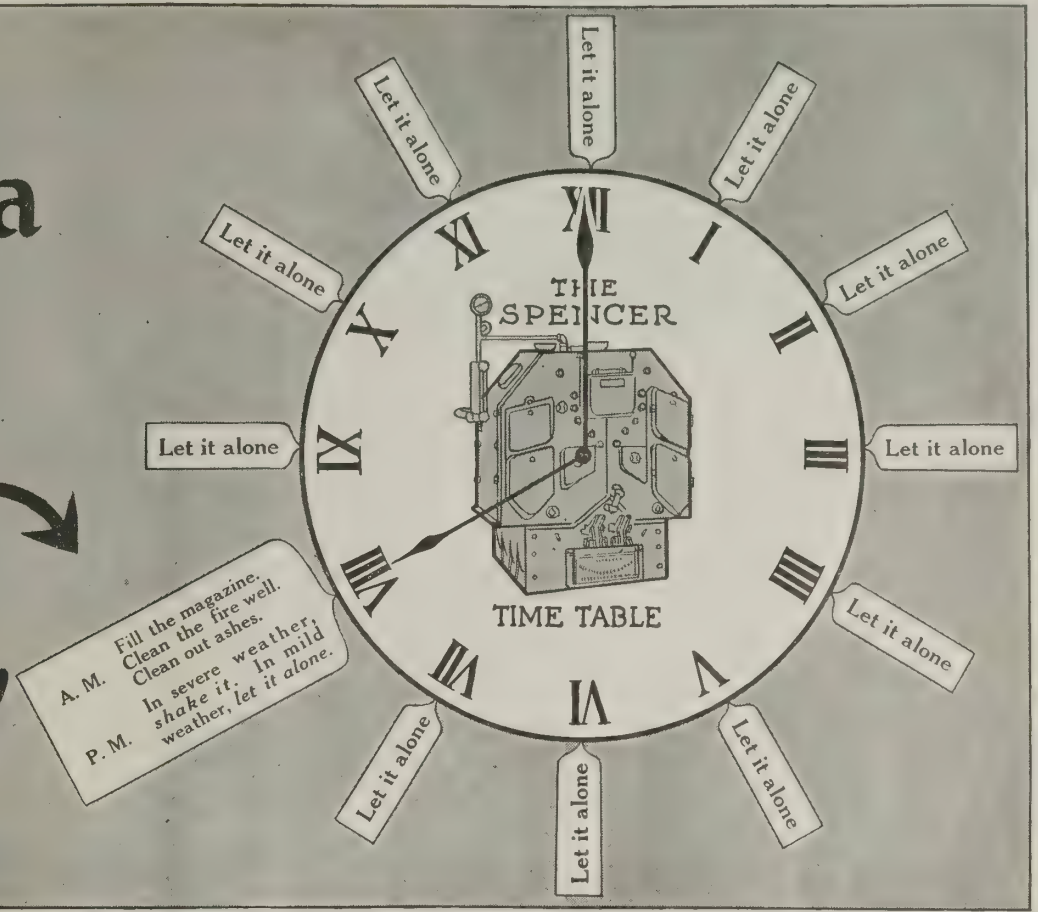
Leaving this thought with the old fellow he went out quickly, before retort could be made. In the hall he passed the broker and nodded genially.

Neither the broker nor Useless let the grass grow under his feet that afternoon. On the balance of the stock they split about even. In all, Useless got three hundred and ten shares; the broker, two hundred and sixty. This left Useless with four

(Continued on Page 37)

How to tend a Spencer Heater →

Let it Alone!



THERE is only one heater built for steam, vapor, or hot water that *runs best when tended least.*

It is the SPENCER SUPER-STANDARD HEATER.

For real Automatic Action is one of the features that makes the Spencer *super-standard*. Because of that, it takes entire care of itself, except for two calls a day. *(See diagram below.)*

In the morning, shake it, clean it, fill the magazine. In the evening, give it a slight shake, with no more coal unless the weather is very cold.

Diagram of the Spencer Coal-Action.

This diagram shows the Magazine which feeds the coal all day, and the Sloping Grates which distribute the coal at even depth, keeping it all afire all the time, with no waste.

Spencer Super-Standard Heaters

Steam-Vapor-Hot Water

"Burn Low-Priced Coal"

Forget it for the rest of the day.

For the Spencer is made to stay alone all day. If tempted to poke it occasionally (as is necessary with all other boilers), *Don't.* A Spencer is like a thoroughbred horse, not to be worried.

Because of that automatic action, you don't need a special fireman. *In a big building*, the janitor or porter is enough, and he can do a full day's work on his other duties. *In a residence*, a few minutes in the morning and at night are all a Spencer needs, whether by man or maid.

The Spencer is so constructed that if the simple instructions we furnish are exactly followed, it will give the highest efficiency with the smallest attention.

But that automatic labor-saving action is *only one* of its super-standard points.

The OTHERS are:

(1.) Saves Greatly in Coal Cost. The Spencer is especially built to burn a very small, low-priced coal, costing normally from one-third to one-half less than the large domestic sizes required for the ordinary heater. It burns this small coal with perfect efficiency, and no more tons than the ordinary heater burns of the usual costly coal.

The low-priced coal usable in a Spencer may be No. 1 Buckwheat or Pea, in the East; Semi-Anthracite or Lignite in the West; Buckwheat and Pea-Coke anywhere.

(2.) Pays for Itself Quickly. The Spencer in a few years pays its own entire cost by its large savings in coal bills.

(3.) Perfectly Even Heat. The exact automatic action produces an unvarying temperature at the degree you want, day or night. No over-heat or shivering chill.

(4.) Adds to Property Value. A Spencer for the above reasons, and because it *doesn't break down*, makes a building better for selling or renting.

Write for the interesting Spencer Booklet describing the construction and giving the pictures.

Take it to your architect and heating contractor for consultation.

IMPORTING GROCERS
1415-1417 H STREET
WASHINGTON, D. C.

February 20, 1917

Dear Madam:

The RYZON BAKING BOOKS have just arrived at our store and we have set one aside for you.

Compiled by Marion Harris Neil, and illustrated in colors showing how your home baking should look when perfect, the RYZON BAKING BOOK represents the baking knowledge of ten thousand women and many cooking experts. It contains entirely new and very desirable recipes for home baking

The Waldorf-Astoria, the Hotel Astor, the St. Regis, the Ritz-Carlton, the McAlpin, and Vanderbilt Hotels, Delmonico's and Sherry's Restaurants, The New York Bureau of Hospital Standards and Supplies; Pratt Institute, where domestic science teachers are trained, and many other leading institutions, after careful investigation, have adopted RYZON for their bakeries.

The Good Housekeeping Bureau, Dr. H. W. Wiley, Director, has awarded RYZON the star of highest rating. As to healthfulness, RYZON is in a class by itself. Its different ingredient is monosodium phosphate, a new baking powder product. As your physician will tell you, phosphates are found in nearly all good foods and are essential to human life.

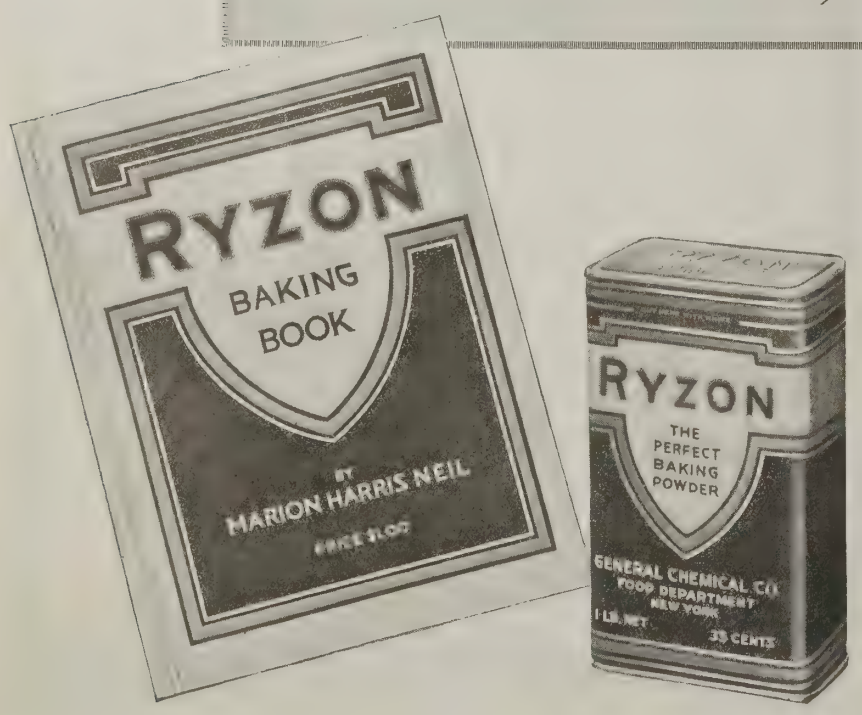
RYZON, The Perfect Baking Powder, and the RYZON BAKING BOOK mean better biscuit--cakes--corn muffins, and no more "bad luck" in home baking.

Here is our offer: include a pound tin of RYZON in your next order, at the regular price of 35c, and we will send you free the RYZON BAKING BOOK, priced at One Dollar--both for 35c. If you are not pleased we will refund your money.

It is recommended that you take advantage of this offer before our supply of RYZON BAKING BOOKS is exhausted, for which attached post card may serve your convenience.

Yours for Better Baking,

G. G. Cornwell & Son, Inc.



A RYZON Letter from the NATIONAL CAPITAL

G. G. Cornwell & Son, a firm of retail grocers in Washington, and well known throughout the country, have sent this letter to their customers. It speaks for itself, and shows how highly these celebrated grocers regard RYZON, The Perfect Baking Powder.

A few of the other well-known Eastern grocery merchants likewise endorsing and selling RYZON are:

New York
Acker, Merrall & Condit Co.
Charles & Co.
Chas. M. Decker & Bro. (New Jersey)
Park & Tilford

Philadelphia
Finley Acker Company
Mitchell, Fletcher & Co., Inc.
Showell-Fryer & Co., Inc.

Boston
Cobb, Bates & Yerxa Co.
Rhodes Bros. Co.

Cleveland
The Chandler & Rudd Co.

"Now I've got the mental punch!"

"Now I can *think*—and *think big!*

"Now I've got the intellectual wallop that knocks the kinks out of business problems!

"Now I'm as keen as a razor and as sharp as a sword!

"Yes, and I give Girards the credit!"

No more dust on this man's thinker. No more fog on his wits. He has cut out the heavy black cigars. Now he smokes the Girard—a full-flavored, soul-satisfying Havana which *never impairs his efficiency or his health.*

The Girard Cigar
Never gets on your nerves

Why don't *you* switch to Girards? Puff for puff you can't beat them for pure pleasure.

The "Broker" actual size, 10c

All the delights of rich, aromatic, shade-grown Havana, mellowed by age and blended with care—and no penalty to pay for your pleasure.

That's why the Girard is *the national Cigar*, sold and smoked the country over, that's why doctors recommend it, that's why you ought to *switch to Girards today!*

The nearest Girard dealer will tell you that this remarkable cigar is all that we claim for it. If your own dealer doesn't sell Girards ask him to get them for you. He can do so with little trouble and no financial risk.

14 sizes
10c and up

Why not pull the switch to Girards today?

Dealers—
a word with you

If you are not handling Girards, there is *a big business waiting for you* in this unusual cigar. Drop us a line today.

(Continued from Page 34)

hundred and forty-five shares to go; but the Boston thousand would take care of that gloriously—if he got it.

At the telegraph office he found a message awaiting him.

"Stock sold Friday," it said succinctly.

His father had it; and now, to his knowledge, there were held against him thirty-four hundred shares, leaving his father but four hundred and twenty-five to go to secure fifty-one per cent. His father had a twenty-share lead.

There were now seven hundred and twenty shares unaccounted for, and from this on they would be more difficult to find and perhaps more difficult to negotiate for. News of the buying was bound to go abroad, no matter what pledges of secrecy were given; and consequently prices were sure to go up. For this Useless did not care, so long as the owners would continue to give him options. He was willing, if necessary, to pay par or above for the balance that he needed.

It now became a race in which ingenuity was as essential as speed.

On the train from Moab to Hermit's Notch the broker accosted Useless. He seemed displeased with the world.

"You're the fellow that's grabbing this railroad stock, eh?" he said unpleasantly.

"I have a little of it," said Useless.

"Who you acting for?"

"Myself."

"Huh! . . . Didn't catch your name."

"Arbury," said Useless with a placid expression.

"Arbury! . . . Arbury! What Arbury?"

"Common or garden variety," said Useless.

"Did Lucius Arbury send you down here? Are you a relative of his?"

"The Detroit millionaire, you mean? No; he didn't send me. Are you buying for him?"

"Yes; and this is a darned queer coincidence of names," said the broker . . . "How much of this stock have you got corralled?"

"Not so much as I expect to have."

"Huh! Know who you're buckin', young fellow? What Mr. Arbury goes after he gets! Have you got a thousand shares?"

"Maybe."

"I'll give you a profit of two dollars and a half a share over what you paid for it."

"Nothing stirring, friend!"

The next three days netted Useless exactly ninety-five shares; following that he made a thirty-mile drive into the country for ten shares and spent a full day locating five shares more. What success his opponent was meeting with he did not know.

Then, as he was coming down to breakfast, the telephone rang, and Mr. Vanner called Useless to the telephone.

"Good morning!" said a voice that astonished and delighted him more than he could have expressed with three times his vocabulary. "I thought I'd run down to be in at the finish."

"Ruth!" he said; but could think of no word to add to it.

"I angled for an invitation to visit Molly Whipple, and here I am; but don't waste a minute coming to see me. Keep right on the job. Maybe I can help some. Good-by! I'll find a chance to see you when it won't interfere."

He wanted to see Ruth, but he well knew she would think better of him for sticking tight to his task; so, to earn her approval, he stuck, and the day brought him good luck in the shape of a hundred shares, left at death by old Martin Cadger, and hitherto not possible to locate. He found them in the hands of five families of grandchildren, who lived in a little mountain settlement twenty miles away, in the next valley.

Ruth was delighted when he saw her that night. She was very sweet and encouraging, and thought he looked older and tired and anxious—though she did not say so. Only encouragement and praise came from her; and when she sent him home at an hour so early as to make him protest, she said to him:

"There's just two hundred and thirty-five shares between us now, Useless."

It didn't sound sentimental, but it made Useless' heart bound; for it meant that when those shares were in his hand Ruth would keep her promise to set a day for their wedding. Useless felt he was engaged on what might, and must, be the most profitable business deal ever attempted by man.

Daily Useless crossed the trail of his father's broker. Once in a while he met the man, but refused to waste time in talk with him. He had but one thought—and that was to acquire stock. Now he was up before daylight; and many times he did not see his bed at all, until the day came when he was exactly seventy-five shares distant from the necessary control. And that seventy-five shares seemed to have vanished off the earth!

It had been issued originally to one Randolph Easter; but Easter was dead. A surviving daughter remembered the stock, and thought she remembered that it had been pledged as security for the loan of two hundred dollars, which her father had invested in sheep with unfortunate results, owing to a neighbor's dog. As to who made the loan and where the stock had then departed she had not the vaguest recollection.

"It's probably lost or destroyed," he told Ruth miserably.

"Well, we'll locate this!" Ruth said.

"If we could only find out who loaned Easter that two hundred dollars!"

"From what I've seen of this country, there aren't a lot of men who could loan that much! Besides, when men lend money here they like land mortgages. Where did Easter live when he borrowed to buy his sheep?"

"Right where his daughter does now. Never lived anywhere else, I guess."

"Then you get a list of every neighbor who lived within a couple of miles of him, and find out about every one of them."

This took Useless several days, though Mr. Vanner was a great help, especially when it came to appraising the financial ability of the people. Useless found that his father's broker was engaged in much the same work. It was a race, then—a race of legs and brains, with Randolph Easter's stock certificate as the prize.

"Do you know," said Ruth after several futile days of search, "I believe that loan wasn't made by a neighbor—just a neighbor. Those folks back there don't understand pledging collateral. It isn't New Englandish. No, sir; that was fixed up by somebody from a city, who knew something about business. But how would Easter get into contact with a city man? . . . Um! . . . Um! . . . City relatives? We haven't heard of any—especially with money. You go out, Useless, and play round. I want to think."

Presently she called to Mr. Whipple, who sat in his library:

"What could bring a city man back there where Randolph Easter used to live?"

"Trout and bass, partridge, rabbit, deer," recited Mr. Whipple. "Good bass lake and the best trout fishing in the state."

Ruth fairly squealed with joy. She could hardly wait for Useless to come back.

"Drive out with me—quick!" she said—"to Easter's, and find out if he ever took summer boarders or worked for fishing parties—or anything like that."

"I'll find out if he was fond of green cheese if you say so!" Useless declared, and meant it.

The question was asked of Easter's daughter.

"Why," she said, "pa used to have a sort of a shanty down on the lake that he rented out to city fellers; and sometimes he used to row their boats or guide them back to the trout streams."

"Could you —— Did your father keep any kind of account books, or anything, so we could find out who those men were? Didn't he keep track of the money he took in?"

"Never took in enough to count," said his daughter, "but there's an old copy book he used to write things down in. Another feller was here askin' about the same questions you be—he was here two hour ago; and I let him see that book. He drove off like he was crazy!"

"Quick!" said Useless. "Let's see it!" He laid a five-dollar bill in her hand. "Hurry!"

The battered, dog-eared, dirty old copy book was a composite of cashbook and diary. Probably it was the backwoodsman's idea of up-to-date bookkeeping. Such entries as this were frequent:

"Dollar and a half from Homan for rowing boat. Catched eight bass. Homan's going to stay a week."

"What year did your father buy those sheep?" Ruth asked.

"Lemme see. . . . Um! . . . 'Twas the year Brother George got married; and that was 1904. Yes; that's it."

It Is Worth While From the First

You don't have to *use* a Goodyear Tire-Saver Kit to profit from it; it starts paying returns in comfort from the minute you put it in your car.

For it provides that complete peace of mind essential to undisturbed motoring enjoyment, in the assurance that you are prepared for whatever may happen to your tires short of complete ruin.

Nothing ever may happen; you may never need the Kit—but it gets in its work just the same. It banishes worry, and eases the mind, just by being along.

The price of the Goodyear Tire-Saver Kit varies according to size; but its cost is trivial alongside the day-in-and-day-out satisfaction of its company.

It is a handy package, containing all essential first-aids-to-tires, even to valve parts and a pressure gauge—it is complete and compact.

Your car ought to carry one—from this hour.

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

After it is cured each ham is marked so you can know at a glance that the ham you buy has the genuine "Swift's Premium" flavor.

This is the butt of a "Swift Premium" Ham. Have one baked for dinner and see what a difference the special Swift cure makes.

Serve baked Premium Ham once—and your family will want it often

Bake the butt of a "Swift's Premium" ham for dinner today and see how exceptionally delicate and delicious this ham is. Know what a welcome variety it offers in the meals you plan for your family.

"Swift's Premium" hams are prepared by experts. Each ham selected is of superior quality, is given the famous "Swift's Premium" cure and is smoked over fragrant hickory wood fires.

You can utilize every bit of a "Swift's Premium" ham in a great variety of really delicious dishes, any one of which will delight your family. Try baking the butt, boiling the shank, and broiling or frying the center slices, without parboiling.

If you are not already one of the thousands of women who are buying "Swift's Premium" ham whole—start now. It is the economical way to buy ham. Swift & Company, U. S. A.

"Swift's Premium" Hams & Bacon

YOU cannot find a purer or more delicious Candy than Nut Tootsie Rolls—we admit that. Just eat one. Made clean—kept clean—wrapped dustproof.

The Stern & Saalberg Co., New York

5¢ a Roll

Rapidly Useless thumbed the book to find 1904's entries.

"Why," interrupted Easter's daughter, "that was the year that sick feller lived in pa's shanty all summer. Griswold was his name."

"Griswold's our man, I'll bet a penny!" whispered Ruth. "And your father's broker is after him this minute—with an hour's start of us."

"Here's a picture of him," said Easter's daughter, warmed by the five-dollar bill. "Him and pa was real chummy. Look: he's wrote his name and things on the back."

"Did the other man see this?" asked Ruth.

"No; I jest told him this Griswold lived in Albany—that's all he knows."

"And we've his full name and address. That start he has won't be such a handicap after all. 'Jordan P. Griswold, Attorney at Law, Monadnock Block, Albany.'"

Ruth was dancing with excitement.

"I'll wire him. Bet dad's broker didn't think of that! He figured he had this all to himself and started right out to get it."

"How soon can he get there?"

"Probably he made that eleven-o'clock train. He'd have a wait at the end of the line, and wouldn't get to Albany before seven or eight."

"And we," said Ruth, "are going to hire the best auto we can get and be driven there—to beat the dickens! There! That's how I feel."

At Hermit's Notch Useless telegraphed Griswold:

"Hold Hermit Notch Railroad stock until I get there. On no account make deal!"

Then, instead of hiring a car, Mr. Whipple, with whom Ruth was stopping, bundled them, together with his daughter, into his big eight-cylindered car and scudded away over the mountains toward Albany. It was a five-hours drive; but Mr. Whipple, constantly urged to recklessness by Ruth, cut it down by half an hour, and they arrived at six-forty-five.

"He won't be at his office now," Ruth said. "Look in the telephone directory for his house address. You, honey," she said to Miss Whipple, "run into the hotel and telephone him we're on our way, and we'll break the speed laws getting there."

They were admitted to Mr. Griswold's library, where he came forward to meet them—an old gentleman with the whitest hair, and a beard such as one associates with patriarchal benignity.

"Wires and telephone messages!" he exclaimed. "Why all this flurry about a few shares of stock I had almost forgotten I owned?"

Ruth was scrutinizing the old gentleman with her bright eyes; and, as Useless started to reply, she said:

"Let me tell him, honey!"

Mr. Griswold turned to her and smiled.

"That turns dry business into real pleasure," he said gently. "But I have an appointment—promised—at this moment with a gentleman who telephoned me from some town in Massachusetts. I think he is being admitted now."

"Mr. Griswold," said Ruth, "he wants that stock too; and he mustn't have it! It means everything in the world to me—and to Useless. If you've promised to talk to him, you must; but please—please don't sell your stock until you've come back and listened to me!"

"That's reasonable," he said, smiling kindly. "I promise."

He was gone twenty minutes.

"Now," he said, "go ahead, my dear. The gentleman is waiting for us—though he doesn't know you're here. He's a secretive person. I judge he doesn't care to have me know why he wants my stock; nor does he act as if he cared to pay a great deal for it. Suppose you enlighten me."

Ruth had weighed the old gentleman and found him worthy of her confidence. She believed she could lay all the facts before him and trust in him for honorable treatment and what she called, boyishly, "a square deal." So she held nothing back; but started at the beginning and told him all that had happened.

"So," she ended, "we've got to have your stock, Mr. Griswold! I—I want Useless so much! And I want him to succeed in this. I want him to show his father what he really is—that he is what I know he is. I know him better than anybody else ever will."

"Yes, my dear," said the old gentleman gently.

"We'll leave the whole thing in your hands—price, and things like that. You see, it isn't to make money we want the stock. Honestly, that doesn't matter with us! It's because I want Useless and he wants me; but we can't have each other unless we can start right—and make Mr. Arbury take back every word he said. I want everybody in the world to be as proud of Useless as I am."

"My dear," said Mr. Griswold, "no one ever loved me like that! Whatever happens to this young man, he has had the greatest success a man can have. He must be all you think he is—or you wouldn't think it. I'm just a lonely old man, with all the money I have any use for, and probably I won't be using that long. I don't need or want any more—but I should like to feel that I have earned the regard of a couple of young folks like you. It will be very pleasant to think about. . . . The stock is yours—for two hundred dollars and accrued interest."

Impulsively Ruth rushed upon him, threw her arms about his neck and kissed him.

"You darling! . . . You darling!" she said with tears of joy, and relief in her voice.

"If you hurry," said Mr. Griswold, "you can catch the express for Detroit—and you're anxious to get there. But—I should like an invitation to the wedding." He spoke wistfully.

"There'll be no wedding without you to make it perfect!" Ruth said.

And presently, with the stock safe in their hands, chaperoned by the Whipples, Useless and Ruth boarded the train for Detroit.

Next morning Mr. Whipple and Ruth and Useless entered Lucius Arbury's office; but Mr. Whipple alone asked admission to the financier's private room. The mention of Hermit Notch Railroad stock gained him quick entry.

"So you're the man who's bucked me on that deal?" Arbury snapped.

"No; I'm merely acting for the party. He has secured a clear fifty-one per cent of the stock. You have exactly thirty-six hundred and seventy-five shares. My principal has the rest. He offers it to you. It will give you the whole of the stock of a road that, as you know, promises to be a remarkable investment."

"What does he ask?" Mr. Arbury demanded; he was a man who wasted few words.

"Seventy-five," said Mr. Whipple.

"He's no hog, anyhow," said Arbury. "For a man with his hustle and ingenuity I figured it would cost me more."

"Seventy-five is his price."

"Take it," said Arbury, and pressed a button.

A clerk entered.

"Draw a check for two hundred eighty-six thousand eight hundred and seventy-five dollars," said Arbury, "to the order of —— To whose order do you wish the check?" he asked.

"Ulysses Arbury," said Mr. Whipple with twinkling eyes.

"What!"

Instead of replying Mr. Whipple stepped to the door and motioned Ruth and Useless to enter.

Arbury gazed at them, scowling, nonplused for once in his life.

"I've turned your ten thousand into a bit better than fifty, dad," Useless said, extending his hand; "and I've come to claim that job. . . . But I didn't do it alone, dad. Ruth furnished the brains; all I did was hustle."

"Do you mean to say you gobbled that railroad—you pair of kids—with ten thousand dollars?"

"With exactly four thousand and fifty dollars, dad. But it was Ruth who planned it."

"Huh!" grunted Arbury. "She did, eh? What's she got to do with it?"

"We're going to be married in four weeks."

"And she pulled off this deal! Well, young fellow, let me tell you something: When you got her you pulled a deal bigger by a heap than the other. . . . I'm satisfied, you bet! Owe you an apology. You are some good! My dear," he said, his heavy voice becoming more gentle, "would it be possible for you to kiss your new dad?"

"A dozen times!" Ruth said, and did it.

Lucius Arbury turned to Whipple, blinking a trifle.

"Some son, eh?" he demanded. "But what a daughter! What a daughter!"

An Important Announcement

By C. W. NASH

President, The Nash Motors Company

NASH Jeffery MOTORS

FOR some twenty-five years now I have been building and selling carriages and motor cars.

During that time I have watched dozens of other men and organizations building motor cars.

I have seen cars come and go. I have watched the standards of motor car building steadily improve and advance.

I believe I can say that I know motor cars—and know them well.

And I say to you now that I have never seen—never known a greater value car than this Jeffery Six.

Now, frankly, I didn't know the Jeffery Six was such a good car when my associates and I took over the Jeffery plant.

As a matter of simple truth I hadn't concerned myself about the car. It was the plant and the organization of mechanics I was vitally interested in.

And after I had eliminated the non-productive labor costs and geared up the organization to high speed volume production at lowest cost, I knew that there wasn't another plant or another army of mechanics in the entire country that was better in any way.

So I put the factory and men out of mind and turned to the car—this Jeffery Six.

And some of the things about that car surprised me. For instance, I found it has more alloy steel than most cars several hundred dollars higher priced.

Nor was it in merely one, two or three features that I have found such high quality—it was in every feature. If there ever was a well built car, a thoroughly quality car, it is this Jeffery Six.

But I didn't stop there. I wanted to know how the motor performed. Many a fine, healthy looking man has a weak heart. And I meant to find out what sort of a heart this car had.

So I rode in it and drove it. Not once but many times. On all kinds of roads. Up hills. In city traffic. Everywhere.

I put the Jeffery Six up against every stress and strain of the road. I tested it as carefully as I would a man I wanted for an important position.

That car convinced me absolutely that it is a car which my associates and I would be proud to sell over our name to our friends.

It has a world of power and speed. And it is amazingly flexible. You can range from two to sixty miles per hour "on high"—never shifting gears. It pulls powerfully, smoothly, silently in the toughest going you can find.

It's what I call an eager car. Step on the accelerator once yourself and you'll know what I mean.

You'll get the same feeling of eager power anxious to be unleashed that I got. You know—without knowing why—that there's a big Niagara of power-energy on reserve in that motor no matter how fast you're driving or how hard the hill.

Yet the Jeffery Six handles easily. You are never conscious of any effort in driving it. And it is particularly free from vibration due to the inherently balanced crank shaft, which is extra heavy. Those big, smooth-working springs make it hard to tell when you're off the smooth road and in the rough.

Now, I've known these things about the Jeffery Six quite a long time. I've been finding out about it ever since last September, when my associates and I bought the Jeffery plant and the Nash organization took control.

And I won't go so far as to say we were entirely satisfied with the car then. Because our engineering staff and I are pretty hard to please.

But the things we have changed in this car are, after all, minor refinements. They make the Jeffery Six a finer car, a better value, but they are not fundamental.

As a matter of fact, I simply did not see how the car could be made better in its fundamental features. And the group of experienced automobile men that came here with me agreed just 100 per cent.

So we'll continue to manufacture this Jeffery Six as it is today. We may develop more refinements later on. For we're not content to stop where we are just because we've got such a wonderful car.

But a big work order for thousands more of the Jeffery Six as it is today, with our added refinements spoken of before, is being put through the factory.

That is the best proof of what we think about this car. It is so good—so unusually good—that we are proud to back it with our name and our money.

I want you to get behind the wheel and learn what I learned.

And I advise you to see your Jeffery dealer right away. Just to make sure that you can have a Jeffery Six this Spring you had better act quick, now It may save you a long wait later.

CARBON

—The Reconstructing Life

You who drive motor cars know how carbon takes the life out of a motor.

Almost from the day you begin to drive a new car, it begins to lose power and smoothness.

The loss from day to day is scarcely noticeable—you unconsciously accustom yourself to it and unwittingly endure it as long as you can.

Then you give up the use of your car and have the carbon removed and the valves ground and reseated.

When you get it back, it is almost as good as new—almost but not quite—and only for a few days.

Then it begins to slip back again and you go through the same thing.

And this is repeated again and again.

After each carbon-cleaning, you notice a wonderful improvement but each time it is a little less effective.

Your motor is never quite as lively as it was for the first few hundred miles—and half the time it is badly carbon-crippled.

Think what it would mean to you if your motor continuously could be kept as lively as it was for the first few hundred miles.

And *think* what it would mean to you if carbon built up the efficiency of your motor instead of tearing it down, steadily *improved* it instead of crippling it.

That is exactly what carbon does for the Willys-Knight motor.

The result is a gain in power and smoothness instead of a loss—a renewal of youth instead of a surrender to age.

Last year we built and sold 12,000 Willys-Knights.

Try to find a Willys-Knight owner who would go back to any other motor.

Carbon, the common enemy of all types of motors, is the reconstructing life of the Willys-Knight Motor.

Carbon *re*vitalizes the Willys-Knight Motor just as steadily as it *de*vitalizes all other types.

Let the Willys-Overland dealer demonstrate its many other advantages.

George Bell's New Teacher

By Helen Van Campen

ILLUSTRATED BY P. V. E. IVORY

WHEN George Bell bought from a man who was leaving the camp a lot of two-by-fours and one-by-twelves, ship-lap enough to board four rooms inside, galvanized iron roofing, windows and doors, the mother of Rosy Gellini began making a white dress. And out of a catalogue Rosina, helped by all the small Gellinis, selected a veil and a wreath of artificial orange blossoms. Everybody knew when Rosy sent out her order, because she had to ask the company storekeeper to write it, as none of the Gellinis could. Rosy could speak English better than her family, and when her tongue halted, her eyes, wondrously vocal when they observed George Bell, completed conversations.

He had started boarding with the Gellinis when the bunk houses elected him a delegate to Crothers, manager of Blaine Island Copper Company. George said, without fiddling about first, the hot cakes were half raw mornings, and even a chap mucking eight hours to a shift, or, like himself, drilling, hadn't a stomach like a horse—the men wanted something done! Crothers said he was doing it, building the new mess house and kitchen; trouble was the cooks hadn't range space now to turn out good cakes for a hundred and eighty men. But if some wished they might board with the families for a while, and as soon as construction was finished there wouldn't be any kicks as to hot cakes.

After reflection, during which Crothers and George gazed frankly one at the other, George said it was fair enough, and in the sitting room of number five, that night, he told the crowd that Gellini could board eight, Larsson six, and so on. Next morning, with Moran, his chucktender, George sat, wedged at the Gellini table, in a kitchen so limited that some of the boarders were singed by the stove, and all were in peril as Gellini children drippily thrust platters across shoulders. Rosina, the seventeen-year-old daughter, served George, and soon she was giving him the best meat and largest portion of pudding, and with the food, glances. She was the one unmarried girl on Blaine, and her father never had to saw or split a length of firewood. Admirers swarmed there, displaying their strength and thoughtfulness as they stood in the sopping tundra, adding to piles already high. George Bell didn't chop or saw—he said the dagos could do that—and he grandly bought a fourteen-dollar log towed in by natives, and paid them to saw it on the beach and lug it to the house. And the night he won sixty at the stud game in Little Pete's shack—no gambling on company property, but Pete was below tide line, down the beach—he came rather blinky-eyed to breakfast, and Rosy was whimpering over the bacon. Mrs. Hallett had declared that in her new red dress Rosy looked a regular Siwash, and Rosy had bought it because the Mister Ge-orge liked red and said it was the thing for eyes of the so black! George yawningly bade Rosy wear the red at noon, when he laughed and asked old Murphy if it didn't make her rather dark.

"Sure she looks iligant! Leave her be!" said Murphy, scowling; but big George laughed louder and threw out some gold among the slopped dishes.

"Git another one, Rosy, an' have it on me," said he, sliding into his ore-crusted overall jacket and rolling a cigarette with one hand. He used the other hand only to tear off the mucilaged edge of the paper. Rosy was already scornful of persons who smoked mucilage. Nights, when cleaned and shaved, in fresh-washed corduroys and light-gray flannel shirt below a hard-brimmed hat, George appeared, his rubber-booted legs splashing through the slushy snow on the tundra flat, Rosy stopped work. Hidden by a sash curtain, she watched.

A long, long time ago it was since anyone had watched for George Bell. His mother had, as his father followed the rushes to the new camps that were the old camps now—Hope and the Turnagain Arm country, Dawson, Nome, Candle, Fairbanks, Ruby. Both of them were gone, drowned when a glacial lake burst and spread the Nizina River over a camp they had made, while marking a trail into the head of the White. George was fifteen then, and he fared on alone, prospecting, making wages sometimes, panning along the creeks. Hungry often, cold often, shivering but healthy under a ragged reindeer-fawn robe. The big Inside is not a hospitable land, and a poor man cannot live on it. George mushed the insect-ridden hills in summer, and in winter he saved for the summer-grub outfit, and quit jobs as soon as snow melted and the ground could be prospected. There was no reason for him to be steady at anything—nobody cared, and he didn't care. Sometimes when he stayed too long over a bar where it was pleasant, joining with the old-timers in yarning to chechakos, there wouldn't be anything left to outfit with, and he would mush to the nearest creek and rustle a job on a placer claim, sixteen hours a day though hired for twelve! He used to smile, thinking how his mother had planned schools, an engineering course somewhere Outside—then he could return to Alaska and get somewhere.

Prospecting the islands of Prince William Sound, a norther blew his little Columbia-River-style launch into the lee of Blaine Island. George, with the flood tide's help, got the boat high on the beach, and Murphy of the power house, peering down, saw a man was needed and shouted a friendly Hold on!

"Got a bed?" he asked, when they had rigged the boat against the next tide and turned out the water. "Sure, you'll be dead, slapin' in thim wet duds an' wetter blankets. Come on an' dhry in the ingine room, an' I tell you what: in me room in the bunk house is another bed! An'—— Murther, bhoy! Is it young Bell? I couldn't see you in the dar-rk, Garge! You ain't forgot Billy Murphy, an' you an' Kelly Olsen pullin' me from the wather on the Nelchina?"

"Aw, that wasn't anything," said George; but he was warmed by the greeting and the kind looks, and when under the noise of the big belt Murphy had speech with other stationary engineers, they came to shake hands and looked respectfully at the tall young fellow in the ragged overalls and torn old mackinaw. Murphy was the first in the store next morning:

"A shirt, plase, and a big size in overalls, and then that thick blue mackinaw underwear, and socks, and a pair of the nine-and-a-half-dollar red-sole boots, and a slicker and sou'wester?"

Murphy said they would fix the boat up, and winter it or raffle it, for this was no weather to be leaving, when jobs could be rustled.

George disappeared while Murphy slept. To Hallett, the mine shifter, George said he wanted a job—any chance? He lied calmly under queries, claiming to have run a machine down south in the Juneau mines, the Gastineau and Mexican—just come now from the Granite over in Port Wells. Hallett finally put him on as chucktender to a miner who had reported that, if he didn't get one who wouldn't grouch, he'd quit. When Hallett was gone George stood inspection under dim candle light in a wet crosscut, then remarked:

"I won't grouch. But I know mighty little about the hard-rock game. Tip me what's next for to-day—not to-morrow, I'll savvy myself then—and you'll be glad you did! Is it a bet?"

Nels Lindquist laughed. He was a strong-passioned Swede, suspicious usually, to-day suddenly entertained.

"I'll yust try you, und if you hold me back with dose holes o' mine, us got to fight or rassle after! Is dat a bet?"

"Sure!" said George, grinning.

Nels was not a natural boss, but George's mind went ahead, and swiftly he was leveling space for their blocking, and making a set-up for the machine drill. He had to bring the sharpened steel from a blacksmith shop and take away the dulled steel. By afternoon he was skillfully unfastening chuck bolts, putting in new steel, seeing that there was water in holes to make a thin mud and prevent the drill from clogging, and turning the valve on the air hose on and off as they moved.

"I make a miner out of you, big falla," said Nels delightedly. He taught George secrets of the rock. When it fitchered and the steel began to stick, George alertly helped, and in a few days they frequently reversed positions, Nels resting by tending chuck, while George's hand turned the throttle air valve of the machine; and he whistled under the whir and whiz as the rock broke away. Copper was high and the mine was increasing tonnage to satisfy the maw of the flotation process mill, where the ore went rumbling through the spinning Hardinges.

"Here, you are a better miner as me," said Nels before November. "Becose you got dose brains. Maybe I don't git all dose good smokes on shift when I git me a new tender, but four dollar instead three dollar four bits is comin' to you."

When the snows of winter drifted to the bunk-house roofs, and the trails to mine and mill were narrow cuts between ten-foot walls of white, George Bell was a somebody in the camp. He was dubbed Big George because there was a smaller George who was much less of a somebody. A freighter smashed the Blaine dock, and the day a shipment of creosoted piles arrived from Seattle, George asked the construction boss for the job of pile-driver engineer, and got it, and for six weeks, in bitter northeast gales, he drove on the work, cursing men who said they wouldn't stay out there to be frozen and blown to pieces, laughing at them for weaklings. The face of the dock was restored in time to receive important machinery for the mill, and George went back to his machine, spotty about the face from the poisonous flicking of creosote as the driver hit wet piles, but feeling good because he had kept his gang together. And the gang bragged about George.

He adjusted various arguments. Some thought it was time to strike for increase of pay. George said wait until they got the mill half apart and were straining to put extra tonnage through the working end, and had started to send through the dumps rendered shipable since the mill's erection. Then strike, if the company wouldn't come through without that action. When an excitable Serbian dropped a stick of number one into an enemy's cook stove, and the house rose up, but queerly left the owner mostly intact, the island seethed and yells for a rope sounded. And George observed:

"You guys better lay off huntin' Masonovich. I put him in a skiff an' headed him for another island last night. What you want to horn in on a feud between a couple of the blacks for? Put that rope back in the warehouse, you're makin' suckers of yourselves!"

Nels Lindquist told Murphy that a chap like George ought not to tie up with a little dago Rosy, and Murphy nodded gravely. That day George bought the house lumber, receiving Crothers' permission to build on company land, the building reverting to the company when George should permanently leave its employ. Before the five-o'clock whistle shrilled across the channel, and the hills of Hoodoo Island opposite cried back, Rosy had met Nick Pavlov's wife, informing her that the Mister Ge-eorge had sold his claims in the Port Wells district, and he was rich! Two thousand dollars paid on a thing called a bond! He was building the so swell a house, four rooms, a bathroom. Imagine of a bath in which to lave all of yourself at once! At dinner he had said four rooms should be the large enough for the two person, if one was a small? Nick's wife exclaimed and rushed to other wives—four rooms and a bath! Only the five staff-officers' houses were so grand. Mrs. Sam Hallett, who taught the Government school, asked Hallett if George Bell were insane, buying that Rosina a fifty-dollar dress and now such house plans! George sent word by Nels Lindquist that he wouldn't take any supper. He and Murphy were using the high tide to raft the building material to the point; and Nels was to aid, when Murphy had to report for work, in packing lumber to the allotted site.

"Have you rhead the letther?" Murphy asked. He stood on the raft, tying a towline to the little craft in which George was cranking the engine.

"Yes," said George, and he flushed.

"A young lady like that one has cour'ge an' intilligence. Sam Hallett's wife's had this school two tarms now, an' the bachelors of a camp should have some chancet. We ought to pull for a single teacher."

"But Hallett's clerk of the schoolboard, an' Carter's the surveyor's director. Mrs. Gardner's treasurer—all staff folks. She'll get a third term."

The engine coughed noisily, Murphy shoved off with a pike pole, and crouching by the engine George headed for the point. It was a windy, raw March evening with a mist of snow muffling the higher peaks of Blaine. These were a smooth cold white. Spruce timber darkened the lower hills. The camp was close to the beach, a long dock reaching into the water, buildings painted company red were set on each side of a long snow shed running from the dock ore bunkers, past the mill and ending at the entrance to the main tunnel. The glory hole of the mine was a big gray gap in a snowy hillside.

George filled the oil cups, wiped his fingers on some waste, and brought from a mackinaw pocket the profile photograph of a girl whom he had decided was chestnut-haired and dark-blue-eyed. Wavy hair, starting from a careful parting, became a sizable knot at the back of her head. Miss Sarah Sherman had written:

I taught last year in the Hawaiian Islands, the year before in New York City. I am a graduate of Smith, can give domestic science if necessary; American, age twenty-six, patient with stupid children, interested in all of them, and well able to handle a mixed-grade room. Climate and accommodations for living are immaterial. I wish to teach in Alaska.

"A new boar-rd may be elected," said Murphy as they landed the raft. "Keep the letther, Garge. A new boar-rd could hire her, you see. Hallett threw that in a basket, an' the Jap janitor he slipped it to me, thinkin' her pretty."

"I kinda like her eyes," said George, and Murphy smiled secretively.

Until long after night had really come, George and Nels dragged lumber. The site was among spruces, away from the other houses whence lamplight sent beams. There was a light in Rosy's window, and a shadow passing often before it. And abruptly Rosy's voice sounded, asking Nels for the Mister Ge-orge.

"Mamma says we got the hot coffee an' grub, you come!"

"I ain't wishin'anything, thank you, Rosy," said George from the gloom.

Nels had already accepted and was striding toward the kitchen.

"Better go home, it's too wet, snow an' mud mixed here," George advised.

"Pleas' you, me I say it?" said Rosy coquettishly.

"Some other night! An'—uh—uh, Rosy, it's been takin' me too long to get up an' down the hill lately, so I got to go eat in the mess again. Will you tell your maw I won't be to any more meals?"

"What—what you—mean?" stammered Rosy. She gripped his arm. "I do somesing, you mad I tell Nick's wife you rich now? Oh, Mister Ge-eorge!"

They were moving forward, and the Gellinis' open door sent light enough to show her large, affrighted black eyes. Gently George said she hadn't done anything—she was a good, nice, little girl! Heaving and whimpering, she hung to him, begging him not to leave her, what was it? was it her letting old Giovanni kiss her? he was just like the uncle, just ——

"Now, now, kid, I ain't your company, an' as—as to that, you'll find some young Italian guy, an' he'll love you desperate."

"You no love me!" she gasped, panting when he said coldly:

"No, Rosy."

"You buy the so fine house! You say it for the two person, the ——"

George broke from her then, for there was a picture between him and her wild black eyes—the new house, furnished, warmed, himself hustling home as he came off shift, and some one different from Rosy, some one cleverer, finer, better—better than he, too, waiting. As he fled along the windy beach, slipping on coils of kelp, he whispered: "Sarah! Sarah Sherman, American, twenty-six!"

The bunk-house schoolboard ticket won by four votes. Alaskan women have the vote, and of the seventeen who were citizens or wives of men holding first papers, one only registered her preference for George Bell as director; William Murphy, treasurer; Nels Lindquist, clerk. She was Mrs. Hanlon, and George had leaped in and saved Hanlon when the latter was blown off the dock, while working with the pile-driver crew. Mrs. Sam Hallett cut George, and early and often she declared that she had a mind to write to Governor Strong about the disgraceful plot—one hundred and sixty men, because they happened to be bachelors, voting down the respectable element whose children made a school necessary! Because there was one little chance to get married! She declined to deliver certain song books bought with the cash result of a cake and pie sale. Let the new board make pies and cakes, if they could, and sell them!

"I stand like a cache robber with these women," George told Murphy, as on a June night they unwound snakes of paper and excelsior from furniture which caused Murphy to mutter delightedly:

"Intelligence! A lady's taste for thrue bird's-eye maple for the bidroom, rale mahogany for the rist!"

"The swellest part is Sarah marchin' in here when I bring her over, an' discoverin' it was her own stuff she was buyin'," said George. "I know her eyes are mighty blue, Murph, with her pickin' blue patterns in the rugs an' the flossy hangin's that's the silk didos. She says they're to drape on the sides, an' with the net things in the middle. I told her to shoot the whole bank roll to have the house right. Ain't the blue kitchen truck handsome! Little change from a smoky lard bucket an' one fryin' pan on the trail, eh?"

The whole camp knew that Miss Sherman, the incoming teacher, had selected the furniture, because an obliging and curious young officeman had typed the new director's request—George announcing that he preferred to chop down a big tree and make shapes of it to writing a little letter. He asked if, as she was coming, would she buy furnishings for a bride's home, not ordinary cheap camp stuff, but, say, the sort a lady like herself would like, with one leather armchair for a big man! There had been an entertaining reply, with a check for cash left from the money orders, and on the next freighter the goods arrived. Headed by Mrs. Hanlon, the camp's ladies stepped over a consignment of mine timbers, boxes of blasting gelatin, sacks of Danish flint pebbles for the mill and, dodging slingloads of freight, inspected, sniffed at and peered at George's furniture.

"As soon as we're married, she can resign, an' Mrs. Hallett can go to it again. I don't want Sarah botherin' with a bunch of kids," said George, while Murphy spread papers on two chairs, and they sat down to rest and admire. "The doggone families will be takin' kids out of school an' puttin' 'em in again while the pas and mas fix up their scraps, an' the way these women have been glarin' at me this spring, I wish Sarah wouldn't even notice any of the lot."

"Sure, they're all sore, you ownin' a betther house than the staff folks," said Murphy. "Well, me an' Nels an' Joe Donelli have spr-read the war-rnin' for gints to rustle their own schoolma'ams to cour-rt, just as you rustled yours. You may have some battles."

"They better have a place bet on theirselves, if they start," said George ominously. "That goes for staff men too."

The teacher was due on the last boat in August, so Murphy told feminine inquirers. And Mrs. Hallett called a meeting, during which it was determined that, sun, rain or blow, the teacher should be properly greeted by her own sex and instantly given the facts of various matters. Everyone was going to the dock. Meanwhile from Cotter's, in Seward, came a new gray suit for George, with suitable shirts and scarfs, and even kid gloves, and from Blum's, in Valdez, ten pounds of costly Outside chocolates.

It was only the middle of August when a halibut smack anchored at flood tide before the power house, and to a cautiously low query from Murphy, on the walk above, the skipper said the Olympia ought to make Blaine by seven that night. Then he said remember him to George, upanchored, and sped off. With a fresh haircut, a shave so close that his ruddy face was redder than normally, George Bell got shakily into his gray suit and French-cuffed silk shirt. Nels was imposing in a new overcoat from Chicago. Murphy, leaving a substitute in the power plant, arrayed himself in neat drabs. The nights were dark now and rainy, and the lower deck of the dock held three inches of water, topped by fuel oil leaked by a just-departed tanker. When the ship whistled down at Carlson's sawmill, and the searchlight sent questioning white tongues at a certain reef, George was waiting on the edge of the dock.

She was on that slow-moving ship, peering at Blaine. Curse the rain that stopped it from looking its best! His heart pelted and his hands were sweaty-cold. Maybe they had the curtains wrong and the furniture mixed. Oh, she wouldn't mind; she was a good fellow. Her two letters had been licking smart, and funny and kind—hoping the lady had liked the furniture! Bless her—his Sarah, his girl. There wouldn't be any lonely aches any more. The ship rocked the dock as it slid alongside, stern and bow lines went over piles, a single plank—camp style with the boat in a hurry—was put over.

"She ain't very big, George. Ketch holt her hand, y'slob!" hissed Murphy, and George lunged forward, swarmed up the plank, and caught a girl in a paperish raincoat who was crying was it always so, or was this a special? George fearfully asked if she would meet Mr. Murphy, Mr. Lindquist—where in time was he?—of the board! And he was Bell! Then Sarah Sherman screamed heartily, having stepped off into the flood, and in a second George lifted her, and she cried:

"Oh, thank you lots! I'd have been drowned, I think!"

He was carrying her through bewildering piles of massed freight, and lights were infrequent, but by one swinging in the wind he saw that her eyes were darkish blue and that her mouth was upturned and sweet.

"You been sick, girlie?" he asked, mounting the steps to the upper deck. "You look right pale—now I can set you down—right pale, and some tired, ain't you?"

"I haven't been very well, it was so hot below," she said, and he sensed that she was pleased at his concern. "But your things—were they satisfactory? If it's for others I always just go out and do the best I can, but it's hard to buy for another woman. What did she say?"

They left the dock, descending some steps to the beach, the gallant board following with hand baggage. Nels stripped a tarp from George's boat, George lifted the teacher in, and Murphy shoved off, remarking privately:

"You won't find a finer lad in the Northland than George Bell, mom."

"Oh, I was sure I'd like him," she said blithely, and to George, who sat by her while Nels ran the engine:

"I was scared about that dressing table, but that'd be about the first item a girl would give up, with freight so awful, and a man wouldn't realize her sacrifice, and, of course, you wish your wife always looking smart, don't you?"

"Yes," said George, and he held a fold of her coat. "The blue runnin' through was mighty skookum. I'm strong for blue."

"So am I—I've a blue gown on this minute! Oh! Is it safe?"

"All shoal water, that's why it's so rough," he said, thrilling because as the boat rose on a ground swell she had crept nearer him. "Here we are! Mind that rock, Murphy, you'll bust in her bow! The schoolhouse's just back a bit, an' the teacher has to bach in a couple rooms upstairs. We got a fire goin'!"

"This is going to be bully fun," said Sarah Sherman. "I can't see an inch! May I hold to your hand?"

"Dose teacher rooms are not much for an Outside lady," said Nels. "George he's got the nice shack."

"He must have, and I have a real interest in it. You know I bought the furniture," she laughed, and Nels relievedly told Murphy he guessed it was a match. The board went gayly ahead, and they were just at the school door when a lantern showed fifty feet away, and a female voice cried: "Welcome to Alaska, and hurry over to a chicken supper!"

"It's Mrs. Hanlon, an' she's been a-cookin' all day for you," said George. "S'pose you take just a quick look an' then go eat, an' by then the boys'll have your trunks over. Will you?"

In another ten minutes George and the teacher were seated at the Hanlon table, stout Mrs. Hanlon garrulously admiring the guest's V-necked, crêpe-sleeved frock of marine blue, Al Hanlon, worried and nervous in a starched collar, mumbling answers when he must. Roasted chickens, canned shrimp salad, canned spinach and corn, potatoes, ice cream—made with a little iceberg George had towed in earlier—a tremendous cake, and coffee. George could not eat and was winkingly rallied by his hostess. Miss Sherman ate restrainedly and praised the banquet with an honest air. Later she insisted on drying the dishes, and the two men were driven into another room, conversing unhappily until Mrs. Hanlon's loud tones sent:

"Why George Bell's not married, honey! Why, yes, he's got the house! My sakes, he got your picture an' began a buildin' same day!"

The other voice was pitched too low to carry. Then:

"But, honey, George is a lovely provider. Why a girl he throwed down after he knew of you, he staked her to a lovely dress, an' he paid two dollars each for the chickens to-night, an' sent over groceries 'nough for a week, an' he says, 'Now, Lulu, spare no pains, no expense, my girl's goin' to be like a queen!' he says. He engineered the election to get you, him an' the bunk houses, he leads 'em all. An' Mis' Hallett, teacher that was, she was beat!—Naturally the ladies don't like Bell now, but my land—— How? Oh, surely, we all knowed of the furnishin'; they can't keep nothin' in a camp, you know. Oh, give George a chance, dearie! He makes good wages; drawed five an' a half a day when he was pile drivin'!"

"Wages?" The other voice ascended. "Is he a common laborer?"

"He's a miner, Miss Sherman." Mrs. Hanlon sounded huffy. "My mister's a rough carpenter, an' handles freight an' such sometimes. Laborin'—I s'pose it is."

"I—really I beg your pardon, Mrs. Hanlon, only I thought—writing of being a miner, I thought it meant ——"

"Oh, now, honey, that's all right! You figgered him a staff man, but lots of them are ninnies—— How? Why surely it was me askin' you to supper, not merely him, but George's so masterful, he sent them chickens, sayin' his girl ——"

Miss Sherman was heard repeating that Mrs. Hanlon must excuse her. It was the briefest parting, and in the blackness the girl was feeling for the schoolhouse door, when George's large warm hand found hers.

"Sarah—little girl—nev' mind that fool woman, listen!"

They were inside then, stumbling against the little desks, and he righted her while she hissed how dared he humiliate, deceive, yes, plain lie—oh, disgusting, contemptible deceit! Would he leave her instantly? It ought to be enough, making a woman the jest of a camp of—laborers.

"I'll take it all, only gimme a chance for my life," said George unsteadily. "No, you can't git loose. I love you! I'm goin' to be good to you, I got your blue house ready, sweetness—blue like your eyes, them curtains are—you'll resign from the doggone school, this board business can be sloughed off. I love ——"

"You are an impossible vulgarian and I scorn you!" said Sarah Sherman hotly.

In the friendly gloom George raised her, fighting, actually clawing him, until his mouth reached hers. He laughed when she viciously clacked her teeth at him.

"You'll git loose if you kiss back—not before. That's how us laborin' vulgarians are," he said, and thought his heart would split. Suddenly her lips gave him a remote, impersonal touch, and as he quickly lowered her, she said, in what was certainly her schoolroom voice:

"Come, come, no more nonsense, my good man! Run along, and don't ever come back!"

She kept the job. Presently the mill superintendent, the dock boss and the head bookkeeper, all college men, were calling evenings. Mrs. Hallett had been the first woman to appear, and Sarah walked along the beach to the store with Mrs. Hallett after the visit. It was reported that the teacher accepted no invitations, replied that she would like to, but to go everywhere would take time from her work, and to go to a few places might create ill feeling. She was friendly but not familiar to the mothers of the school children. Mrs. Hallett had allowed children under school age to come with their elders—one reason for Mrs. Hallett's popularity, because the mothers were relieved of a care. Sarah's dictum prevented this, nor were they permitted, as formerly, to entertain themselves by roosting on a tundra bank before the school windows, making faces at their relatives within. Mrs. Al Hanlon called once and was received with kind formality and, leaving, Mrs. Hanlon declared the teacher an upstart! Just mentioned the name of George Bell, poor fellow, and been looked at by that girl as if the latter hadn't heard!

The teacher had been told about Rosy, now the fiancée of young Johnny Riva, but still wistful as she gazed at the beautiful new house that could never be hers. Johnny had tried to rent it, but George Bell sharply said the house was

GORDON
Seat Covers
TAILORED TO FIT

Give a look of fresh up-to-dateness that is most attractive in a motor car.
All the accumulated dinginess of travel disappears and the cushions actually seem to smile.

More and more, motorists are coming to appreciate this added elegance of Gordon Covers. It's a pleasure to merely look at them and a real delight to sit on them; and of course they bring you home with clean clothes.

Gordon Covers fit smoothly; are cooler in summer than leather cushions and warmer in winter. Besides, they save wear on upholstery and motor coats. Can easily be kept fresh and clean with soap and a brush.

Cover for back of front seat, showing pockets, and pockets in door covers.

There's a Gordon Seat Cover "tailored to fit" every American-made motor car and model. The fabrics are exclusive Gordon patterns in browns, greys and tans. Weaves are especially firm and close to insure wear.

Your accessory dealer has these handsome, serviceable covers and will gladly show them to you. Also we will send without cost, a booklet describing Gordon Covers in 26 distinctive fabrics, printed in actual colors and giving the price of seat covers for your motor car in any of these fabrics. Write for it.

Gordon Easy On Tire Covers Are Tire Insurance

Thoroughly well made of long-wearing fabric. Give just the protection from sun and weather necessary to insure full mileage from every tire you carry. It's good business to save tires; therefore protect yours with Gordon Easy On Covers. See your dealer about "tire insurance" today.

THE PASSING OF LEATHER

YOU cannot stop Improvement. It goes hand in hand with Time. TEXTAN—the Goodrich Sole for your shoes—is becoming *generally recognized* as the Successor to the leather sole.

The shoe manufacturer knows it, the shoe dealer knows it, and now the People—you, the wife and the kiddies—are finding that TEXTAN is better than leather, any way you look at it.

Because our forefathers walked on leather is no reason why WE should religiously follow their example. THEY rode in lumbering coaches, and illuminated their homes with candles, but that does not deter US from enjoying the luxury of steam and electricity.

The leather sole was a good servant—but it is now outdone.

TEXTAN is NOT rubber, but a Fibre sole and is manufactured to a standard quality; it is flexible to the point where it never has to be "broken in"; it is good-looking enough to go on your Sunday shoes; it is positively water-proof; and, best of all, *it outwears leather.*

You would prefer TEXTAN Soles for *one* of these advantages alone. You might as well enjoy them *all.*

Any shoe dealer has shoes with Textan Soles in stock or can get them for you. Any cobbler can Textan your shoes.

It is the Sole for the Whole Family.

neither for sale nor for rent. He wrote—in his own hand this time, and it was an easy, loopy one that astonished her—offering the residence, rent free, to the teacher, who ignored the note and bought more pans to put under the leaks in her apartments. The board was afraid of her. She did not consult them at all, but merely gave them orders, which she sent in letters left for Murphy at the power plant. She ordered a better trail cut from the school to the creek, and the board hastily obeyed. Must have more desks, more books; disgraceful not to have those on Alaskan bird life and Northern flowers! A phonograph—the fifty-dollar sort—records so the children could sing with them, a large globe, more blackboards, more materials!

"Sure, I'll infarm her nobs we got no appropriation this year excipt for her hundred monthly an' jan'tor sarvice. These extrys are comin' from your poke an' not the Alaska school fund," said Murphy angrily; but George said:

"Money's no good to me now; git what she hollers for. An' when they delay sendin' her warrant from Juneau, tip me off an' we'll slip her the cash!"

"Ah, Garge lad, ain't there a way to square things with her—you in misery, the house goin' to waste?"

"I don't want her anyhow," said George bitterly. "A guy'd need to be a quick jumper, married to her, Murph. She's mean. She cut me with a mess of native brats lookin', an' she laughed an' went on. I scorn her now!"

The women of Blaine were delighted. Good enough for George Bell! The bunk houses were divided. Winter came. Nothing to do off shift but sit round the big stoves and explain how the property ought to be managed, and what ailed the new compensation law, and plan the boats to be built in the spring. On the moonlit clear nights the livelier people climbed the iced hill back of the snowshed and skied wildly past impeding tree tops. The teacher went, using the ski Al Nordstrom had ordered from Outside. Nels Lindquist was always of the party, sourly observing her, wondering how the girl could laugh and slide and catch eager hands. The mill superintendent was forever round her. She wore a clever suit of dull-blue mackinaw, short-skirted and yellow-sashed, and a blue cap on her glinty chestnut hair. Her cheeks were round, and the Outside paleness had fled before a Northern pink. It was during one of the snow-party nights that a note signed S. Sherman was left at George's bunk house, and instead of going to the schoolhouse very soon, as requested, he sat on a snowdrift before the snowshed, awaiting her passing.

"You wish to see me, madam?"

The mill superintendent, who was her escort, stepped aside at her low explanation, and she began:

"Mr. Bell, I have discovered that you have been paying my salary when the boats were late. This must stop!"

"All right," said George.

"It's not that I don't appreciate your action!"

To his silence she said:

"There was absolutely no reason for it!"

"Thought you might need the money—the laborin' classes do sometimes."

"I hardly think I have shown any—any distress!" said the teacher tartly.

"Well, if there's apologizin' to be done, you better do it—not me," said George, and he left her. Her eyes were glittery when to the mill gentleman she said it had just been some school business. Next day she heard, and verified through the company-store's order book, that it was George who had bought the fine coal heater she had demanded. Did the board think her children could study and be efficient, snuffing coal dust from that old stove that no repairing would put in a state to draw properly? The stove had been ordered by cable. The teacher made her own social laws on Blaine, and the fact that females were not supposed to enter the bunk houses did not prevent her from appearing in Number Five that night and requesting a few words with George Bell. They stood on the chilly porch, banked round with snow and hung with somebody's just-washed, stiffening underwear; and when she had flamed upon him, George said:

"I staked you to the stove, an' the music machine, an' books, an' all the truck. What of it? We don't go round in Alaska cryin' an' whinin' when somebody spends a few two-bit pieces! I done it for the kids, not for you—you ain't nothin' to me! You've had your nose in the air at the common laborin' man, an' they tell me your old man's a farmer on Long Island, wherever that is!"

"He has an estate there—farmer indeed!" said the teacher scornfully.

"Let him have it! You might be a graduate of Smith; my mother was the first woman in her state to be admitted to the bar! But she came up here an' did the best she could, an' she never lost her good manners neither!"

"You haven't followed an excellent example then! But I came here to hand you this check for the stove. Take it!"

"Say, that's plenty. I'm the board an' I'll put what I please into that school, an' bein' the board, the teacher better listen when I talk! Do you git me?"

"I know you are a—perfect—bully!" said Sarah furiously. "All over this camp you've sent the story that I felt myself better than workers, when I ——"

"When you're just a workin' woman yourself!"

"Just One Minute, Gentlemen. I Have Here a Cable From Governor Strong at Juneau"

It was a short, unusual winter in the Northland. In March salmonberries had budded above the snow on the Blaine beaches. The wind brought a fresh smell of ferns that were pushing through the tundra. The channel was often smooth, and the sun shone warmly from a rich-blue sky. The peaks were streaked with brown from snow and rock slides. Spring coming, and another election! When the ships, in early April, changed to the six-day summer schedule instead of the winter's ten, the papers they left were not so exciting as the news that Nick Pavlov, John Larsen and Mrs. Jackson were on one ticket; Sam Hallett, Mrs. Gardner, the assayer's wife, and Boyd, a mill shift boss, made another. The Pavlovs wanted a different teacher, because when Anna Pavlov stayed at home the teacher came for her and warned the household that actual illness was the only excuse for absence; helping mamma get ready for a party would not suffice. Mrs. Jackson was a friend of the Gellinis, who still felt Rosy's wrongs had come through teacher. John Larsen had taken George's soap in the bunk-house change room, and later had run into a left hook and a few crisp remarks tossed out while John sat foggily on the slopped floor.

The camp tattled that Harlowe, the mill superintendent, was making it unpleasant for his shifter, who had unwarily been swept into the Hallett fold. Then suddenly, a third ticket: Harlowe; Cabell, a mine shifter; and Crothers, the manager of Blaine! Their slogan was Sarah Sherman for teacher. Cabell and Crothers each had two children in school. Mrs. Crothers began electioneering—Sarah and she were consulting and walking together daily; Mrs. Cabell called at certain homes where she had failed to stop previously; and Harlowe indicated to the mill men that their support would make them popular.

"By jolly, I like for see them Pavlovs beat," fumed Nels Lindquist. "Dose staff guys are all big its now, settlin' dose teacher games. I radder see a new teacher, though Pavlov he don't savvy much, an' a yealous wife she don't leave him get a looker, er, Murphy?"

"The fight's growin' vicious," said Murphy, as the board sat after supper, with legs hanging over the walk before the power plant.

"Election's last Monday in April, ain't it?" asked George. "How many in camp would follow me, Murph?"

"I'll figger," said Murphy, interested. He made a list, whistling dubiously. George censored it.

"I couldn't buck the mill when they've got two tickets now. But I can do this—they say she's goin' to marry Harlowe, an' I'll stop 'em from havin' everything their own way! We three'll be the board again—an' she won't be teacher!"

Crothers, the manager, was angry. Mrs. Crothers was at home, crying. The Cabells and Halletts had definitely quarreled, and the storekeeper was almost a madman from the strain of holding office as election judge. Watchers for all tickets, voters and pickets had swarmed into the store. The polls closed at eight, and countings by the three parties left them undecided. There were thirty voters not heard from. These were the George Bell faction, and earnest whisperings to those either at work or off shift seemed useless. At six o'clock a large fishing smack steamed to the dock, and George Bell, handsome in blue serge and soft gray hat set on the back of his head, walked out there smiling. Thoughtfully he tore the mucilaged edge from a paper, creating a cigarette with his left hand, while his right greeted men who jumped nimbly ashore from the smack.

"Hello, George! What d'you know? Kelly Olsen's comin' on the Daisy B, an' he's got sixty with him, like your letter said!" bawled the little fat captain who led the crowd. There were fifty round George as the Daisy B's

NEVER AGAIN!

(Concluded from Page 13)

"Not this time!" he said grimly, a curious calm succeeding his rage. "That's old stuff, and I don't fall for it any more. Hold her, Rance, till I finish with this half portion."

Then he stepped close and stood over me.

"Git up!" he commanded. "Git up and come on outside! I don't want to mess up Rance's place."

But I would not. That he should expect it betrayed a selfishness and ignorance in keeping with his behavior. No; I remained on the floor.

"Are you going to git up and let me finish?" he demanded impatiently.

"Why should I?" was my haughty rejoinder. "I am quite comfortable where I am. Besides, I do not understand."

"That's what I aim to explain to you."

"Possibly; but I can hear the explanation here. What is the meaning of this assault, sir?

"I chance upon a lady whose motor has stalled in the street, and endeavor to aid her. And this is my reward for kindness! Blows and abuse—and indignity for her. Shame upon you, m'sieu!"

"Also, fie, fie!" he said with a sneer. "I suppose you two were fixin' the machine at that table over there—huh? Don't pull anything like that on me! If you wanted to help a lady crank her car, why wasn't you at it, instead of lappin' up drinks with her? I guess that'll hold you—both of you!"

"MISTER Thomas!" cried madame.

"And you shut up," continued her ogre of a husband, "or I'll give you somethin' to blubber about. Do you hear? Fine state of affairs—ain't it?—when a pal has to phone a man to come git his wife! Only for ol' Rance, I might never of knowed!"

He could hardly expect either of us to enthuse over the druggist's loyalty, m'sieu, and I made no pretense of doing so. Instead, happening to descry M'sieu Field going past the store in his roadster, dragging the flivver at the end of a rope, I tried to attract his attention by waving my arm.

"Who's that?" he asked truculently.

"Another Good Samaritan who sought to befriend madame. Perhaps you would like to attack him also, m'sieu!"

"No; because he's decent. He's a gen'l'man! You don't catch him trying to mash a respectable married lady ——"

"No, indeed; you do not!" I said significantly.

"He's out there doing his best to start the car, while you —— Dog-gone! I've talked all I'm agoin' to. Will you come outside, or won't you? I'm sure sorry, Rance, but if he won't I aim to clean him here."

"This," exclaimed madame in a voice whose tragedy I shall never forget, "is what I get for marryin' a bum! It serves me right! Ma warned me!"

I glanced at her. Memories of the maternal adjurations, so unhappily ignored, dimmed her eyes, and she was on the verge of breaking down. Her distress was harrowing to witness. I instantly formed a resolution.

"Do not be uneasy, m'sieu!" I cried, springing briskly to my feet. "I am at your service. We will go outside and settle our little difference. But, that we may avoid the unwelcome attentions of the rabble, I propose we step into the lane at the back. Is the proposition agreeable to you, sir?"

"Why, one place is as good as another, I reckon," he replied, completely taken aback.

Aha! I had scored against him! I could detect it at once in his altered demeanor, m'sieu—in the very tones of his voice. He instantly dropped all bluster. Not for a moment had he anticipated that I would accept his challenge, especially with such cheerful alacrity—an alacrity that seemed to render the issue less certain than he had supposed. And here I would like to observe, my friend, that this has been my observation of fighters: their eagerness for the combat wanes in proportion to their antagonists' zest for it.

Completely restored to poise by the success of my maneuver I now approached the fair cause of it all and said to her, with respectful ardor:

"Have no fear, madame. I will administer a lesson to this bully that he richly deserves. Do not weep, I beg of you. All will be well." Then, bowing to the husband, who remained a puzzled spectator of this tableau, I added coldly, "After you, m'sieu!"

"Uh-uh!"

"And why not, pray? You desired me to go outside!"

"Sure! But we'll go alongside each other. You don't git me from behind like that."

Such were the boor's notions of honor, m'sieu! My blood boiled. It was the one thing needed to fire me for the fray. And in that moment I determined that no false notions of chivalry should hamper me in the struggle; that I would cast away all nice considerations of fair play between combatants and make a whirlwind of the affair which would leave the more desperate of us winner. It was the only possible plan with such a wretch, my friend. It was, as M'sieu Joe Hicks often impressed upon me, the only sure method of bringing home the bacon.

Eh bien! We issued out into the lane—the druggist, my enemy and myself—and I started leisurely to remove my coat. Mark now his treachery, m'sieu—a treachery undoubtedly begotten of fear. The rascal did not give me time to remove it. No; with a profane word, he sprang at me, and the battle was on.

So sudden was his onslaught that he caught me unprepared. Dimly I saw his arms flail the air, and when I attempted to dodge under, something arrested the movement. Simultaneously I became aware of a shock to my whole frame, followed by an excruciating pain in the right eye, which seemed to dim my vision. Indeed, the optic was practically useless to me during the rest of the encounter.

Obviously it was of paramount importance that I should evade further blows, for this Charlie delivered them with a force and malevolence that stunned. Accordingly, when he drew back his arm for another stroke I ducked my head and plunged under his fist, straight at his middle. Do you divine my purpose, m'sieu? It was to butt him in the stomach.

The attempt brought the happiest results. The impact was as violent as I could have wished, and he let out a grunt. Then over he went, with myself on top. Eureka! I had him!

But even as this exultant conviction forced itself upon me and I was essaying to choke him with my hands, the better to insure victory, the tables were reversed. Yes, my friend; the traitorous Charlie did not remain down. No sooner had his back touched the ground than he gave a heave with his knees that precipitated me headlong and, before I could even turn over, he had pounced on me again. Striding my recumbent form, the brutal fellow pressed my face into the dirt with one sinewy hand, while he belabored my body with the other.

"Charlie!" shrieked madame from the doorway. "Shame on you! To pick on a little fellow like that! Let him up! Let him up or I'll go fetch a policeman!"

What response, if any, he would have made to this appeal will never be known, for as luck would have it his attention was diverted by a fortunate accident. In the mêlée the bottle of paregoric had rolled out of my pocket and now lay on the ground near his hand. The moment his eyes beheld this he left off beating me to seize it.

"Look here, fellers!" he shouted to the crowd of spectators who had flocked into the lane at the first sound of our combat. "Paregoric! Just what this li'l rat needs! I'm agoin' to make him swallow the whole bottle."

Instantly acting upon this plan, he pinned my arms down with his legs and prepared to administer the dose.

So! The barbarian would even deprive my adorable boys of the medicine they needed! The thought gave me the strength of Samson. I executed a mighty wrench and hurled him off.

"Ouch!" he wailed in agony. "He bit me! He bit me on the knee!"

Your American crowds, my friend, are ever true sportsmen. Their sympathies run to the dauntless contestant who strives against odds. They now set up whoops of pure delight.

"Hooray!" they yelled. "Go to it, Frenchy! Bite him agin!"

You may well suppose that I was resolved to do so should the opportunity present itself. I shook the hair out of my eyes and made ready.

But he did not come on again with his former enthusiasm. I had taught him a lesson. He had tested Henri Giraud's mettle and had no relish for it.

However, the cries and jeers of the crowd spurred him to renew the attack. He ceased rubbing the leg I had so adroitly nipped, and made another rush.

And then, m'sieu—then I executed a ruse that I had been planning from the outset. Because of his larger dimensions and weight he might be my superior in the *combat de boxe*, but he was sadly deficient to cope with me in other respects; for, united to a higher order of intelligence and keener wits, I possessed a training in acrobatics against which he could not hope to contend. Little did he suspect, as he came rushing blindly upon me, that Henri Giraud had enthralled audiences the world over with feats of agility that deceived the eye, and had more than once earned the plaudits of crowned heads. Yes; he little recked that, even as I pretended to flee, I was meditating a *coup de revers*.

But such was the case. The second he leaped forward I turned my back and ran—yes, ran! A moment, however, and I dropped upon my hands. And then, in full view of the astonished natives, I swung both feet with full strength, catching this Charlie under the chin.

"Charlie's knocked off work for the day all right, all right!" said the druggist, bending over to examine my senseless foe. "Some wallop—believe me!"

I rose and nonchalantly dusted my clothes. The eager populace quickly swarmed round me, patting my back and applauding. Their admiration of my exploit was boundless, and filled me with gratitude and pride.

"Just what d' you call that?" inquired one gentleman. "Gee! It's got an uppercut beat fifty-two ways from the ace."

My satisfaction was doomed to be short-lived, however; for as I was standing there modestly receiving their congratulations I heard a shrill cry close to my ear, and without any warning whatsoever madame fell upon me from behind, scratching and striking with her little fists. The fickle crowd immediately swerved to her cause and cheered uproariously.

This engagement might have gone hard with me, m'sieu—for I hesitated to strike a lady with whom I had recently been on such amicable terms—had not a policeman arrived. He came running up the lane, and close behind him was M'sieu Sam Field.

"What's this?" demanded the officer, dragging the lovely Bertine away, despite her grip on my hair.

I explained as well as I was able, aided by spokesmen among the spectators.

"Is that guy hurt bad, Rance?" he inquired of the druggist.

"I don't reckon so. But he ain't come to yet."

"Best get the ambulance, while I take this bird along to the station," said the policeman; and the druggist entered the store to telephone for it.

"But, officer, I assure you I am guiltless," I protested.

"Tell that to the judge. That's what they all say," was his unfeeling reply.

M'sieu Field now interfered, suave and smiling. Truly, *savoir-faire* is an inestimable quality, my friend.

"Sergeant," he said amiably, "I happen to know that this fight was forced on my friend here. It would hurt his position if you took him along in the ding-a-ling wagon. Now I've got my car out in the street. Why not let me drive you to the station? Or, better still, let me take him home. If any charge is laid against Henree I'll put up bond for his appearance—any amount up to a million."

The officer hesitated, looking from M'sieu Sam to me.

"All right, Mr. Field," he said at last. "If you say you'll bring him into court, it's good enough for me. But take him away before he gets into another scrap."

"Come on," cried M'sieu Sam eagerly, and we started out of the lane. First, however, I regained possession of the bottle of paregoric.

"Say!" called the policeman. "Are there any mules in your family?"

"There are not, m'sieu," I answered, somewhat puzzled by the question.

"Well, beat it before this lady gets loose. You behave now, ma'am! Charlie'll be all right in an hour or two; so cut out the hollerin'."

Eh bien! M'sieu Sam and I hastened joyously into the street.

"Gee! That's some eye you've got, Henree!" he exclaimed. "You'd best put a piece of steak on that, Ol' Settler, or it'll look like a map of Serbia."

"Very well," I assented. "It causes me no pain, but let us do so. Here is a restaurant."

As we were about to enter the place I perceived the flivver madame had driven standing inertly at the curb.

"Did you not, then, succeed in getting it started?"

"Nary a sound out of it! I dragged the cussed thing ten blocks, Henree, and still it wouldn't fire. Must be busted I reckon. Come on! Let's get that beef."

We approached the lady at the lunch counter, who eyed me very dubiously.

"My friend, here," explained M'sieu Field, "wants a steak. And he wants it quick!"

"Sure!" she said, and departed to the back regions.

While we were waiting, numbers of the spectators followed us in and ringed us round. Loud were their praises of my skill and courage, and I received many flattering suggestions. One gentleman urged me to sign up for a contest with M'sieu Jess Willard; but I could not, of course, countenance such a proposal, and pooh-poohed the idea.

We sat there a quarter of an hour, M'sieu Sam growing more impatient each minute, and then the waitress brought the steak. My friend, she had fried it, with potato chips on the side!

"Let's get out of here and go home!" he cried; to which I willingly agreed.

We emerged on to the sidewalk, and there was madame preparing to step into her machine for a fresh trial. Behind her stood M'sieu Charlie, supported by the druggist. He appeared very weak and shaken; but I was relieved to perceive that he would not require the services of the ambulance, even then storming down the street toward us. Neither of them would so much as glance in our direction, and accordingly we walked across to M'sieu Field's roadster.

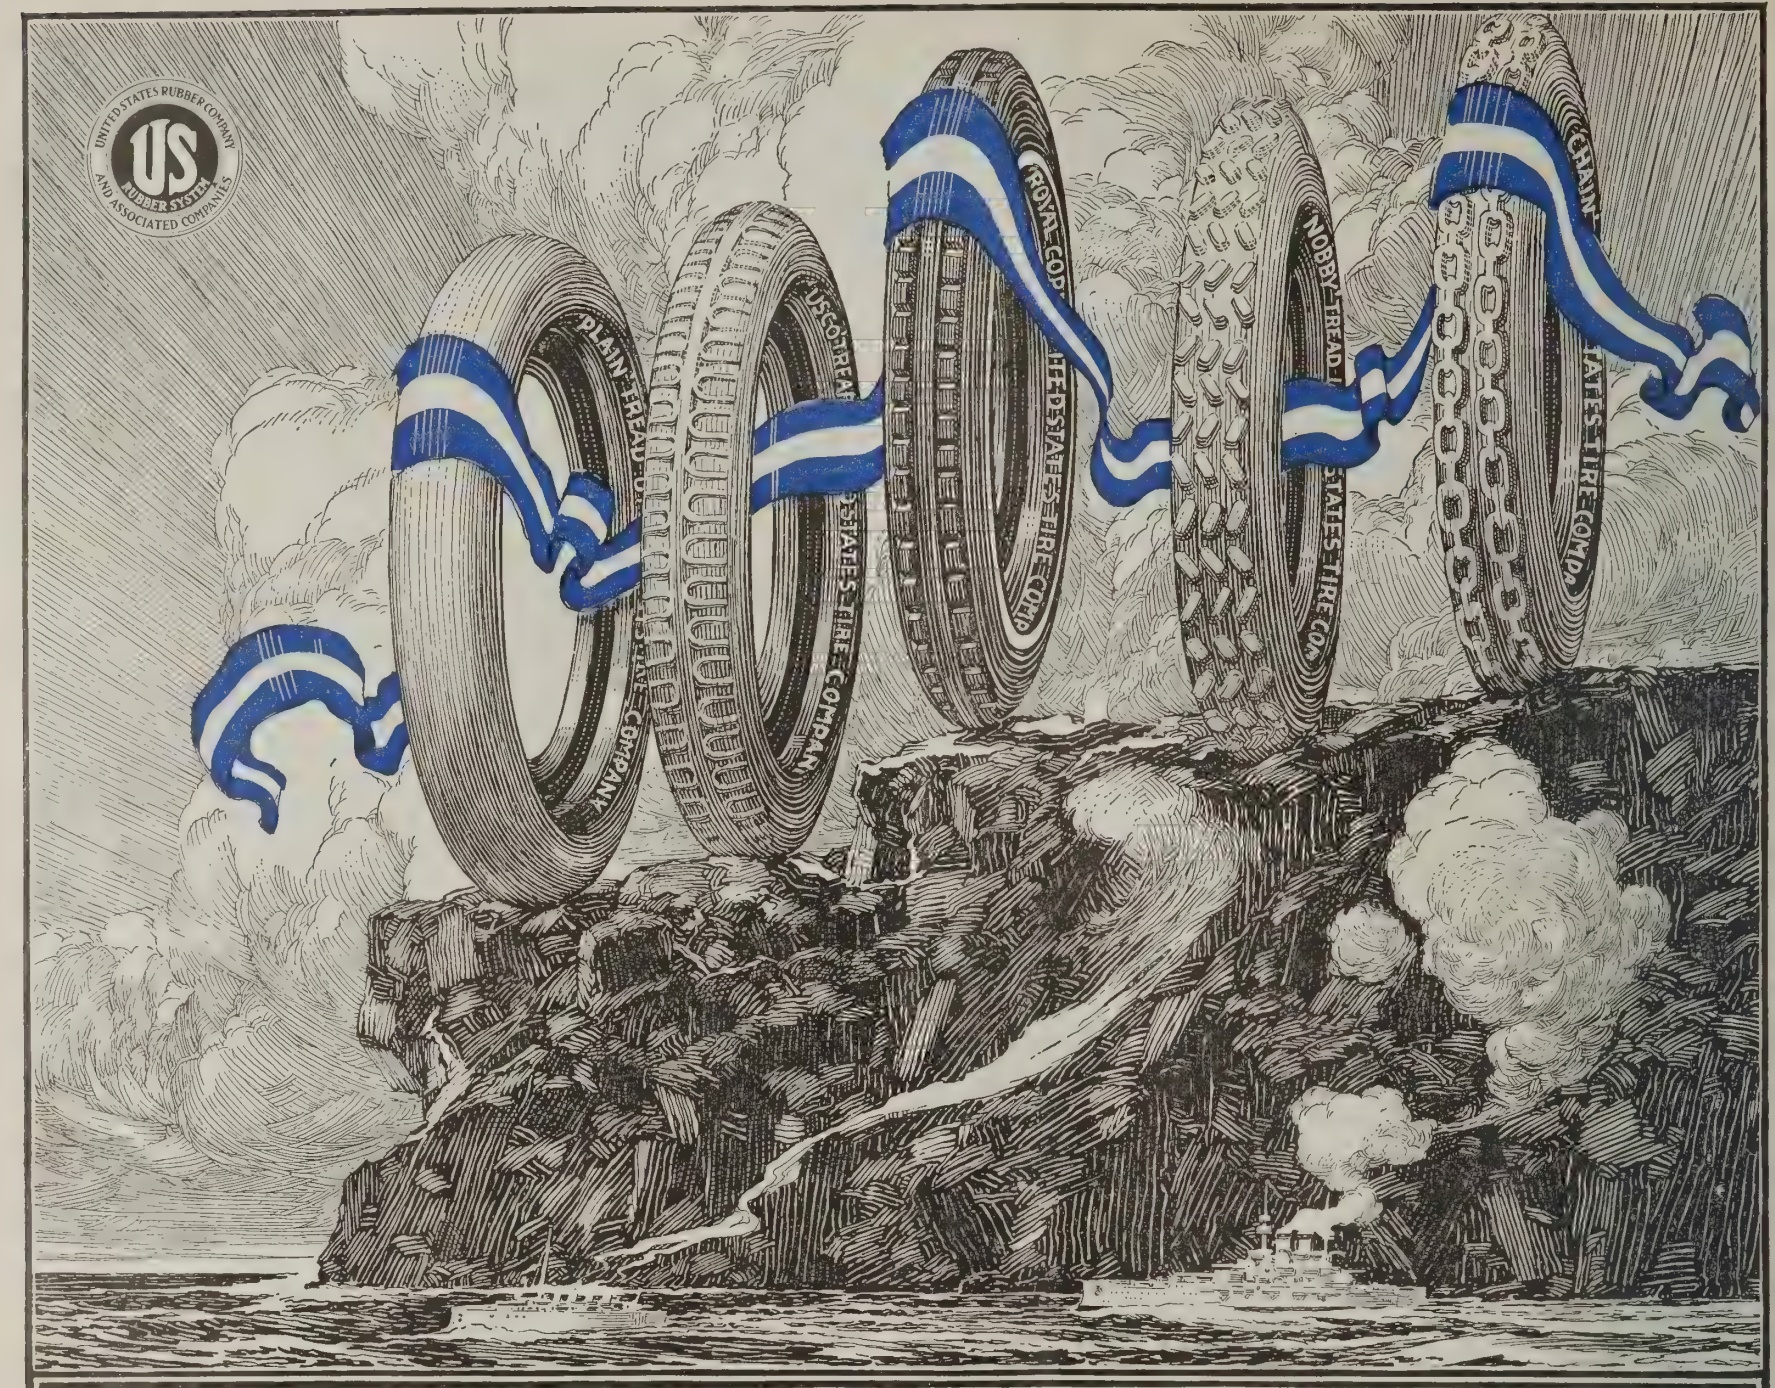
The druggist now undertook to crank madame's car. I watched, with secret elation. He spun and spun; but there was not so much as a pop to reward him.

A jitney came rattling along and pulled up opposite them. The driver surveyed the druggist's efforts a while, and then alighted. He had an exceedingly harsh countenance, and the back of his neck was shaved. "Won't she start?" he demanded gruffly. "Here; lemme try. This is the only way to treat 'em."

And, approaching the stubborn Lizzie, he administered several hearty kicks.

"Now," he said, seizing the crank, "you git agoin'! Hear me? I've had enough trouble with you!"

And the flivver, m'sieu, ran right along.



Five Safe Beacons of Mileage

Five—not merely one.

Five types of tires to satisfy every condition—of car or road—of price or performance.

Five types of United States Tires—the only complete line of tires manufactured by any one company.

* * *

The Jack of all trades is a master of none—

—neither can a "Jack" tire give maximum mileage.

No one type of tire can possibly suit all needs any more than one hat can suit all heads.

* * *

Consider price limitation; consider design and other elements of tire construction;

—consider the type of automobile, its weight, its power, conditions under which it will be driven:

—these factors alone make it evident that a "Jack" tire, no matter how versatile it may be, *won't do.*

Equally evident is it that to get lowest mileage cost and highest anti-skid efficiency, only a specialized tire *will* do.

* * *

If you need tires, go to a man who knows tires thoroughly—the specialist.

Put *your* actual conditions of price and use up to *him.*

United States Tire Dealers carry a complete line of *United States Tires*—the five different types that meet every possible need of price and use.

Be governed by the Tire Dealer's judgment—*he knows.*

That is the way to be sure of the low mileage cost and the high anti-skid efficiency which you want.

* * *

Remember, United States Tires comprise the only complete line of tires made by one tire company.

The tremendous and continuous sales increases of United States Tires prove their utter dependability.

The five types

'Nobby' 'Chain'
'Royal Cord'
'Usco' 'Plain'

United States Tires Are Good Tires

A Tire for Every Need of Price and Use

GEORGE BELL'S NEW TEACHER

(Concluded from Page 45)

stacks showed above Clam Point's trees, and in fifteen minutes she was tied up, and a black-haired, lawless-eyed young Norwegian was roaring:

"Hello, kid! How goes it?"

"'Tis Kelly Olsen an' a rigular mob, me bhoy," said Murphy, awed.

"You bet, an' they're with me. I'll show her!" said George, and his mouth laughed while his eyes stayed cold. Into the vestibule of the store they went, an orderly file. In one side, out by the other, was the command. The little fat captain grandly dropped his vote into the ballot box and, challenged, said:

"Residence? I'm an Alaskan."

"That don't go! You've no residence on Blaine Island!"

"Put 'em out, Shuey!"

"Why, they can't vote here; don't accept it, Billy!"

"Just one minute, gentlemen," said the voice of George Bell. He was standing on a counter, stacks of blue overalls in upset about his tan-shod feet. "I have here a cable from Governor Strong at Juneau, which states that a residence of one day in Alaskan Territory entitles any citizen, or those holding first papers, to vote at school elections, anywhere in the territory!"

"It's a fake!"

"No, he got the cable last boat; I took it from the mail clerk!" said a voice. "I remember him sayin' we ought to have wireless here."

"Well, by Jove, they've got to prove residence! They may all be sailors," cried Harlowe, and some one shouted:

"Any cables about that?"

"The two boatloads have been camped down at Jack Wilson's bay for thirty hours, my friend," said Kelly Olsen. "My word's good on the mainland! I don't know if it goes here."

"I knew Olsen in Nome!"

"So did I! George's got 'em all on the hip, ain't he?"

"Hand in your votes, boys," said George, as he stepped down. "New teacher due!"

In the general uproar of that evening, coal for the schoolhouse, weighed and sacked earlier and piled on a landing stage, was not delivered. Sarah Sherman had seen it, while on the bank above she conferred with Mrs. Cabell.

She went home and waited, and determined to have coal. She started along the beach, climbed a stairway to the store, arriving as George took his stand among the overalls. She backed out hurriedly and, with a blazing face, rushed to the beach, thinking chaotically. The last humiliation, was it? Maybe his new teacher that his pirate crew would bring was buying more furniture—Outside! But anyway she would have that coal, and no board needed to help. She could take it! In the blue-satin gown, with blue-silk stockings and patent-leather pumps, and a delicious little dull-blue hat wreathed in pink rosebuds; and gloves—all assumed for this special day that Harlowe had sworn to make a triumph—she hauled blindly at a dory. It was a hard pull over the gravel, but she got it in the water and close to the landing stage. Hot flashes stung her. Before all of them he had announced his new teacher! With white-gloved fingers she tugged at a one-hundred-and-twenty-five-pound coal sack which burst as it hit the bottom of the dory. Then another—and more. Coal heaving was easy when you were excitedly strong. Gloves still buttoned, she raged and rowed—not very well; she had a diggy motion, and the twelve-foot oars of a work dory were awkward.

George Bell saw her as she passed the point. The tide was mostly taking her then. He began to run, and in the Fourth-of-July races in many camps he had beaten the swiftest dog mushers, seasoned from winter trails. The schoolhouse was close to the shore of a little bight where Hanlon kept a boat. He could catch her, if the coal didn't put the dory down so much that the leaky side seams sank it.

Through slippery kelp and over upreared driftwood he streaked, plunging into concealed waterholes, when he struck the tundra flat of the point, and bursting through a spruce jungle to the shore again. Hanlon's boat was gone. He heard a wild cry from the water, and he stood staring bewilderedly, for there was no dory in sight. The channel stretched away toward the other islands and the open sea beyond; he would have seen if she had turned back. Abruptly the undulating ground swell came beachward, and far out he glimpsed a head, chestnut hair loose, and a little blue hat departing on the tide.

He ripped off his coat. Strong swimmers cannot stay afloat long in Alaska's freezing waters, and in anguish he thought of her sinking before he caught her. Faintly her voice came:

"Don't you come for me, George Bell! I'm not drowning! The coal sunk the boat on a reef and I'm standing; I'm perfectly all—all—don't you ——"

"Shut up, you little fool!" he bellowed, and drove toward her through the water.

"I'll die before I'm saved by you! I hate ——" A screech ended it, for the swell had swept her off the reef's edge. He could not swim as he could run, for the native-born Alaskan seldom has water warm enough to learn in, and he thrashed the waves like a killer whale. But he neared her, and bullishly he fought the tremendous ebb tide that was sucking her toward the open. A wave that he made broke over her white face; he saw her bright eyes dull as his arm shot out and grabbed her. She was limp as he towed her ashore.

"Open the little mouth, lovey!" Sarah heard. "It's coffee. Drink, baby! Little more—an' some more—swallowin' the salty stuff's had you pretty sick."

It was strong and black and comforting. She was certainly on land, lying on a springy couch. A stove was pleasantly noisy, there was a wolf robe over her, and peering from drowsy eyes she saw blue hangings on a window.

"This isn't my house!" she said weakly.

"Yes, it is!"

She looked again. There were small pools of sea water on the blue-patterned rugs. She pulled out a hand in a coaly white glove and eyed it thoughtfully, then gazed at George Bell, who was whistling as he dripped about, making toast on the Yukon heater. The room had a lived-in air. By the lamps on the table were books and a typewriter.

"I come over nights an' study engineerin'. I'm goin' to take a real technical course later on," he observed, arriving with a plate of buttered toast. "Goin' to try my cookin'?"

Sarah Sherman moved, sat up, and looked at him. George put aside the plate, knelt, and stared hungrily into her eyes. He saw a sudden blush creep over her cheeks; she bent toward him and sobbed:

"You shan't have that new teacher. I won't let you!"

"Just my own teacher!" said George huskily. And she put the coaly-gloved hands about his neck and kissed him impetuously. Still in a tight embrace, she sighed:

"Well, you've got her, dear."

"An' you've got your laborin' man!"

THE HOLD-OUT

(Continued from Page 10)

"That'll do, boys!" I hollered to them. "We'll quit. The express rates on caskets between here and Davenport is somethin' fierce."

I walked back to the hotel with Mr. Edwards. I never seen a guy so blue.

"He's impossible," he says.

"Never mind," says I. "He won't be with us long. One o' these days his luck'll desert him and he'll get killed."

"I think we'd better send for Hagedorn," says the boss.

"Oh, no," I says. "He'll show up before long."

"Yes," says Mr. Edwards; "but he'd ought to be here right now to get used to playin' with Gould and Berner. And I ain't so sure he'll show up, neither."

"I'd like to make you a little bet," I says. "I'd like to bet you five that we hear from him before the end o' the week."

"I'll just take that bet," says Mr. Edwards, "and I'll be glad to pay if I lose."

Well, knowin' him pretty well, I didn't hardly believe that. But I told him the bet was on.

The first train into the Springs from the North is supposed to arrive at nine in the mornin' and it don't hardly ever get in later than 3 P. M. On this Thursday it come at one-thirty. I snuck down alone to meet it, and there was Bill. "Mighty glad to see you, Hagedorn," I says.

"I'm glad to get here," says Bill.

"You don't need to work to-day if you don't want to," says I, "but we want you out there as soon as you feel like it."

"Why, what's happened to this wonderful Lahey?" says Bill.

"Not a thing," I says; "but, as you pointed out, he's a left-hand hitter, and we're overloaded with 'em."

"I suppose you'll play him when they's right-hand pitchin' against us," says Hagedorn.

"No," I says, "I don't believe in switchin' on the infield. Still, you'll have to keep hustlin' to hold him on the bench. He's one o' the most remarkable first sackers in baseball."

"I'm just as good as he is," says Bill.

"You'll have to show me," I says.

"That's just what I'm goin' to do," says Hagedorn.

"And how's everything at home?" I ast him.

"Well, Frank," he says, "it's been a tough winter—the toughest I ever put in. I'm in debt so far that it scares me to think of it."

"Where was that $2000 you had saved?" I says.

"I was just stringin' you about that," says Bill. "I never had a nickel saved. But $2000 is just about what I'm behind."

"Good lord, Bill!" I says to him. "What have you done, bought a limousine?"

"No, sir," he says. "I ain't bought nothin' only clothes and food and not much o' that. But I was way in the hole before, and just this week they've ran up about $200 more on me."

"What for?" I ast him.

"Well, Frank," he says, "the wife presented me with a little boy last Sunday mornin'. If it hadn't been for that, and the way she worried about things, I'd of never been down here to sign for $4000. It was a case of have to, that's all."

I'd left orders for the boys to be out for practice at a quarter to two, and I knew Mr. Edwards would be out there with 'em. I and Bill was pretty near to the hotel by this time, but I stopped him short.

"Bill," I says, "you ain't givin' me no bull like that $2000 fortune, are you?"

"No, Frank," he says, "I'm tellin' you the truth."

"All right, Bill," I says; "I'm takin' your word. They's a northbound local train leavin' here at three bells. You go down and get aboard it and ride to Silver Creek. That's a station about twenty miles up the line. They's a hotel there, and that's about all. You go there and stay till I send for you."

"What's the idear?" he says.

"You'll find out later," I says. "I just tell you now that it's to your interest to do what I say."

"I can't go nowheres," he says. "I've got just forty cents."

"I'll stake you," says I, "and you'll hear from me in three or four days."

"But I want to get out there and see this here Lahey," says Bill. "I want to get busy showin' him up."

"He'll tend to that end of it himself," I says. "But you're on this ball club and I'm manager of it, and if you want to stick on this ball club you'll obey the manager's orders."

So Bill took the local for Silver Creek and I beat it out to the orchard to see that nobody got killed.

I set down with the boss at supper that night.

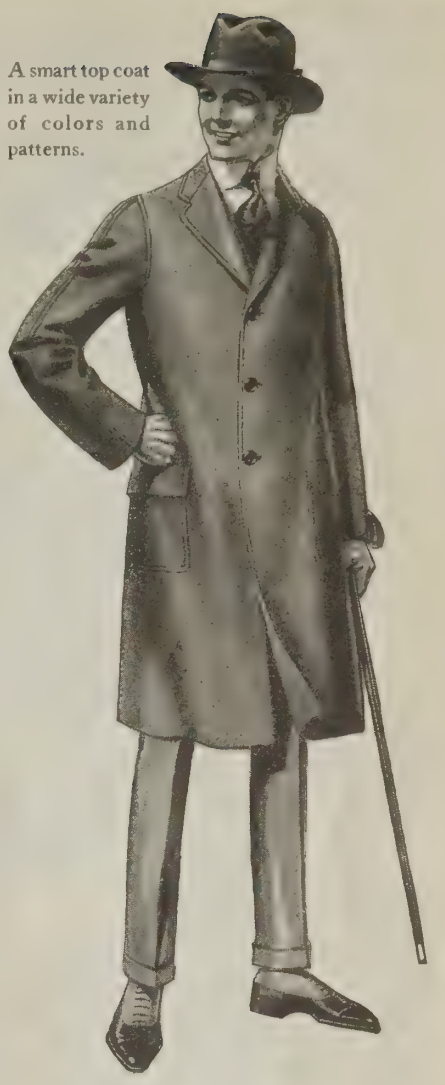
"Mr. Edwards," I says, "I've changed my mind about Hagedorn."

"What do you mean?" he says.

"I mean that I think he's through with us," I says.

"But good lord!" says the boss. "We can't get along without him."

"Well," says I, "we can get him by givin' him $6000."



A smart top coat in a wide variety of colors and patterns.

You'll find all your overcoat desires gratified in the new "R&W" Warm-an-lite. It's a very smart looking overcoat made of a remarkable soft and light fabric.

Your dealer will show you the Warm-an-lite in a variety of interesting colors.

EASTER'S IN THE AIR

AND SUNNY SPRING'S AHEAD OF US.

You're thinking of your new Spring Suit. Shall it be the usual "put-it-on-and-take-it-home" sort, or—Shall it be made for you—your own—moulded to your form—suggestive of your personality! In a word—CUSTOM BUILT?

Let me decide for you. Let it be KAHN-tailored. Measurements of men who once test KAHN QUALITY and KAHN SERVICE stay on our books for all time—for, in tailoring KAHN Made-to-Measure Clothes for Gentlemen, we have one aim—TO GIVE NOT ONLY THE BEST THAT IS IN US—BUT THE BEST THERE IS.

Make your EASTER Suit a KAHN Suit. THERE'S A KAHN DEALER NEAR YOU. "THE-JUDGE-ON-THE-BENCH"

KAHN TAILORING COMPANY
OF INDIANAPOLIS

Mr. Edwards shook like he had a chill.

"Give in to him now!" he says. "When he's tried to hold us up! And I thought you was so sure he'd come round."

"I did think he would," says I, "but I'm sure now that he won't. He's stuck this long, and he'll stick forever. He's gamer'n I figured."

"But I'd rather lose another $18,000 than let him hold us up," says the boss.

"Well," I says, "that's up to you. But you'll lose the $18,000 all right, and maybe then some, if you don't get him. Because without him on first base we'll be the worst ball club in the league."

Mr. Edwards didn't say nothin' more for maybe five minutes. Then he give up.

"I got a lot o' confidence in you, Frank," he says. "I'll go by what you tell me. If you want to you can wire Hagedorn. Tell him we'll meet his terms, and tell him to get here on the first train."

"I think it's the best thing to do," I says. And I went out and pretended to send Bill a wire.

It takes two days and a half to get to the Springs from home. So I called Bill up at Silver Creek and had him blow into camp on the Sunday train. I met him and tipped him off. He fell all over himself thankin' me and says he was goin' to name the boy Frank. And then he made a request.

"Keep this a secret from my missus," he says. "I want her to think that I got wha I was after because I insisted on it. Be cause she kept tellin' me all winter that wouldn't never get it and was a sucker t try."

"Don't worry," I says; "I want it to b kept a secret from certain people myself and I certainly ain't goin' to spill it to n woman."

Mr. Edwards was on the walk in front o the hotel when I and Bill showed up.

"Well, Hagedorn," he says, "you go what you wanted and I hope you'll try and earn it."

"I'll earn it all right, Mr. Edwards," he says, "and I'm mighty grateful to you for comin' acrost."

The boss turned to me.

"How about our little bet?" he says.

"What bet?" says I.

"You bet me five," he says, "that we'd hear from Hagedorn before the week was over. And this is another week."

"So you want me to pay you that five?" I ast him.

"I certainly do," he says.

Well, I give him the five, and afterwards Bill told me he'd make that up to me as soon as he could. But I can't accept it from him. I'd feel like I was takin' candy from a baby, a baby named Frankie Hagedorn.

PROTECTING AMERICA FROM ESPIONAGE

(Concluded from Page 15)

of the United States. And it has asked the Congress to prevent any alien in the United States from acting as agent of any foreign government without first having notified and obtained the consent of the Government of the United States.

This is a step exceedingly important in protecting the country against espionage.

During the entire period of the present war we have been embarrassed by the activities of aliens whose position with respect to belligerent governments has not been entirely clear to us. Many persons appearing to act in an official capacity for foreign governments have carried on various propaganda in the United States. The activities of aliens who appeared to be acting in an official or quasi-official capacity for foreign governments have given us a great deal of trouble. If all such persons were prohibited from acting as the agents of foreign governments, except in cases where the United States was first notified and its consent obtained, the whole matter would be at once so simplified that our government could easily handle it.

Another powerful weapon the Administration is asking the Congress to put into its hand, in this fight against the activities of resident alien spies, is the search warrant. Heretofore there seems to have been no provision for the issuance of a general search warrant in the enforcement of the Federal criminal laws. Such warrants were authorized only in statutes relating to customs and internal revenue, and in certain particular cases, such as introduction of liquor into the Indian country, presence of unmailable matter, and vessels violating the Alaska Fisheries Law.

No plan of general procedure against espionage in the country could be effective without adequate search-warrant authority.

The government must have the right to search localities it has reason to believe may be used as spy headquarters, the domiciles of suspected resident aliens, and the like. If it were unable to act under search warrants the arrest of an individual spy or group in an organization might prove entirely barren of results.

The recent experience of the government with the German liners in our ports has suggested the need of fuller authority on the part of the Federal Government to deal with dangerous situations that may at any time arise. The customs officers have not had sufficient authority to enable them to keep the government informed with respect to the uses made of these vessels. They have not been able to inspect them or to prevent them from being dismantled, injured or used as headquarters for activities at variance with our national policy.

The Congress has been asked to give the government authority to inspect any foreign private vessel within the jurisdiction of the United States for the purpose of detecting any use of such vessel in violation of our statutes or treaties; and, if it sees fit, to take entire charge of such vessels, removing their officers and crews.

In the face of the present international situation there must be no locality in this country that is not open to governmental surveillance. Any place that is exempted, in any degree, would be the very locality selected by spy organizations. The demand of the Administration for this right is amply justified and must be apparent to everybody.

One is astonished at the inadequate authority of the government to protect the country against espionage before the presentation of the measures requested by the Administration.

These measures undertake to cover this deficiency in a number of directions. They prohibit anybody, who does not act with lawful authority, from endeavoring to obtain any information with respect to the national defense. One cannot approach or even fly over any war craft or navy yard, naval station, submarine base, coaling station, fort, battery, torpedo station, dock yard, canal, railroad, arsenal, factory, mine, telegraph, telephone, wireless or signal station building, office, or any other place connected with the national defense, owned by the United States or under the control of the United States; or any place in which any vessel, air craft, arms, munitions or other materials or instruments for use in time of war are being made, prepared, repaired or stored, under any contract or agreement with the United States.

Everybody is prohibited from making any sketch or photograph, writing or note of anything connected with the national defense. Severe penalties are provided for the punishment of anybody who obtains from any source whatever any document, writing, code book, signal book, sketch, photograph, blueprint, plan, model, instrument, appliances or note of anything connected with the national defense.

The greatest care is provided to see that no code or signal book of the United States is permitted to fall into the hands of any person not entitled to have control over it; and anybody who undertakes to turn over to a foreign government any information relating to our national defense can be imprisoned for a period of twenty years.

In addition to this, any person who harbors or conceals anybody whom he knows or has reasonable grounds for believing or suspecting to be a spy may be fined ten thousand dollars and imprisoned in a Federal penitentiary for two years.

The President of the United States is given authority to extend the law to cover any other places he may wish to exclude from public inspection. He may also enlarge the scope of the law, with respect to information relating to the national defense, if he considers it necessary in order to protect the country from espionage.

A Battery To *Suit* Your Car

START the new touring season fully prepared against battery troubles. Insure yourself complete satisfaction by the greater power, energy and durability of the Prest-O-Lite Storage Battery—backed up by universal Prest-O-Lite Service.

There is a Prest-O-Lite Battery of correct size for *your* car. It is the result of years of conscientious effort, exacting tests, and large expenditures. It is designed and built to give you the maximum power, service and value—to eliminate the greater part of battery troubles.

No matter where you may be—no matter what car you drive—the great country-wide Prest-O-Lite System of Special Service Stations and Direct Factory Branches is at your disposal—carrying a complete stock of new batteries and battery parts for *all* makes of cars—offering expert inspection, repair and recharging service for *all* battery owners.

Sooner or later you will need a new battery. Remember—there is a Prest-O-Lite Battery of correct size for your car and it will give you the utmost in service and satisfaction.

300,000 BROTHERS PLUS *SOUND* INSURANCE

THIS states briefly the benefits that come with membership in The Maccabees—a practical demonstration of the giant protecting force in the Brotherhood Idea—mutual help and family conservation which have been brought to working perfection and made *economically practical* by The Maccabees.

The order of The Maccabees is on a *bedrock business basis,* and is able to assure you not only the benefits of friendship and brotherly aid, but sound insurance protection at lowest possible rates.

A Maccabee Certificate is as good as gold. Over $90,000,000 has already been paid in their redemption. Present assets over $21,000,000. Write for our list of securities.

At the close of 1916, The Maccabees had a membership of over 300,000 in more than 5,600 subordinate bodies.

Whole Life Twenty Annual Payment Certificates

This is one of the many popular forms of insurance protection now offered by The Maccabees. It appeals strongly because it enables men to provide, in fruitful years, *a paid up certificate* which will guard them against want and dependence in later and less prosperous times. White persons from 18 to 50 years of age are eligible if in sound health. If there is no local lodge (Tent) near your home and you would like one there, or if you desire further information as to plans and benefits, fill out the coupon below and mail to our general offices at Detroit, Mich.

The Noncombatant

By IAN HAY

WE WILL call the village St. Gregoire. That is not its real name; because the one thing you must not do in wartime is to call a thing by its real name. To take a hackneyed example, you do not call a spade a spade; you refer to it, officially, as Shovels, General Service, One. This helps to deceive—and ultimately to surprise—the enemy, and as we all know by this time surprise is the essence of successful warfare. On the same principle, if your troops are forced back from their front-line trenches you call it "successfully straightening out an awkward salient."

But this is by the way. Let us get back to St. Gregoire. Hither, mud-splashed, ragged, hollow-cheeked, came that redoubtable battalion, the Seventh, after four months of continuous employment on the firing line. Ypres was a household word to them, Plugstreet was familiar ground; Givenchy they knew intimately; Loos was their washpot—or rather, a collection of washpots; for in winter all the shell craters are full to overflowing. In addition to their prolonged and strenuous labors in the trenches, the Seventh had taken part in a push—a part not altogether unattended with glory, but prolific in casualties. They had not been "pulled out" to rest and refit for over six months, for divisions on the Western Front were not at that period too numerous, the voluntary system being at its last gasp, while the legions of Lord Derby had not yet crystallized out of the ocean of public talk which held them in solution. So the Seventh were bone tired. But they were as hard as a rigorous winter in the open could make them—and they were going back to rest at last. Had not their beloved colonel told them so? And he had added, in a voice not altogether free from emotion, that if ever men deserved a solid rest and a good time "you boys do!"

So the Seventh trudged along the long, straight, nubbly French road well content, speculating with comfortable pessimism as to the character of the billets in which they would find themselves.

Meanwhile, ten miles ahead, the advance party were going round the town in quest of billets. Billet hunting on the Western Front is not quite so desperate an affair as hunting for lodgings at the seaside, because in the last extremity you can always compel the inhabitants to take you in—or at least exert pressure to that end through the *mairie*. But at the best one's course is strewn with obstacles, and fortunate is the adjutant who has to his hand a subaltern capable of finding lodgings for a thousand men without making a mess of it.

The billeting officer on this, as on most occasions, was one Cockerell—affectionately known to the entire battalion as Sparrow—and his qualifications for the post were derived from three well-marked and invaluable characteristics—namely, an imperious disposition, a thick skin, and an attractive *bonhomie* of manner.

Behold him this morning dismounting from his horse in the Place de St. Gregoire. Round him are grouped his satellites—the quartermaster sergeant, four company sergeants, some odd orderlies, and a forlorn little man in a neat drab uniform with light blue facings, the regimental interpreter. The party have descended, with the delicate care of those who essay to perform acrobatic feats in kilts, from bicycles—serviceable but appallingly heavy machines of government manufacture, the property of the "Buzzers," or Signalers, but commandeered for the occasion. The quartermaster sergeant, who is not accustomed to strenuous exercise, mops his brow and glances expectantly round the *place*. His eye comes gently to rest upon a small but hospitable-looking *estaminet*.

Lieutenant Cockerell examines his wrist watch.

"Half past ten!" he announces. "Quartermaster sergeant!"

"Sir-r!" The quartermaster sergeant unglues his longing gaze from the *estaminet* and comes woodenly to attention.

"I am going to see the town major about a billeting area. I will meet you and the party here in twenty minutes!"

Master Cockerell trots off on his mud-splashed steed, followed by the respectful and appreciative salutes of his followers—appreciative, because a less considerate officer would have taken the whole party direct to the town major's office and kept them standing in the street, wasting moments which might have been better employed elsewhere, until it was time to proceed with the morning's work.

"What is your strength?" inquired the town major.

Cockerell told him. The town major whistled.

"That all? Been doing some job of work, haven't you?"

Cockerell nodded, and the town major proceeded to examine a large-scale plan of St. Gregoire, divided up into different-colored plots.

"We are rather full up at present," he said; "but the cemetery area is vacant. The Seventeenth Geordies moved out yesterday. You can have that." He indicated a triangular section with his pencil.

Master Cockerell gave a little deprecatory cough.

"We have come here, sir," he intimated dryly, "for a change of scene!"

The stout town major—all town majors are stout—chuckled.

"Not bad for a Scot!" he conceded. "But it's quite a cheery district, really. You won't have to doss down in the cemetery itself, you know. These two streets here"—he flicked a pencil—"will hold practically all your battalion, at its present strength. There's a capital house in the Avenue Jean Jacques Rousseau, which will do for battalion headquarters. The corporal over there will give you your *billets de logement*."

"Are there any other troops in the area, sir?" asked Cockerell, who, as already indicated, was no child in these matters.

"There ought not to be, of course. But you know what the Heavy Gunners and the A. S. C. are! If you come across any of them fire them out. If they wear too many stars and crowns for you, let me know, and I will perform the feat myself. You fellows need a good rest and no worries, I know. Good morning."

At ten minutes to eleven Cockerell found the quartermaster sergeant and party, wiping their mustaches and visibly refreshed, at the exact spot where he had left them; and the hunt for billets began.

A Company was easily provided for, a derelict tobacco factory being encountered at the head of the first street. Lieutenant Cockerell accordingly detached a sergeant and a corporal from his train and passed on. The wants of B Company were supplied by commandeering a block of four dilapidated houses farther down the street—all in comparatively good repair except the end house, whose roof had been disarranged by a shell during the open fighting in the early days of the war.

This exhausted the possibilities of the first street, and the party debouched into the second, which was long and straggling and composed entirely of small houses.

"Now for a bit of the retail business!" said Master Cockerell resignedly. "Sergeant McNab, what is the strength of C Company?"

"One hunner and thairty-fower o' ther ranks, sir-r," announced Sergeant McNab, consulting a much-thumbed roll book.

"We shall have to put them in twos and threes all down the street," said Cockerell. "Come on; the longer we look at it the less we shall like it. Interpreter!"

The forlorn little man, already described, trotted up and saluted with open hand, French fashion. His name was Baptiste Bombominet—"or words to that effect," as the adjutant put it—and may have been so inscribed upon the regimental roll; but throughout the rank and file Baptiste was affectionately known by the generic title of Alphonso. The previous seven years had been spent by him in the congenial and blameless atmosphere of a ladies' tailor's in the West End of London, where he enjoyed the status and emoluments of chief cutter. Now, called back to his native land by the voice of patriotic obligation, he found himself selected, by virtue of a residence of seven years in England, to act as official interpreter between a Scottish regiment which could not speak English and Flemish

Use fewer eggs in baking by using Royal Baking Powder

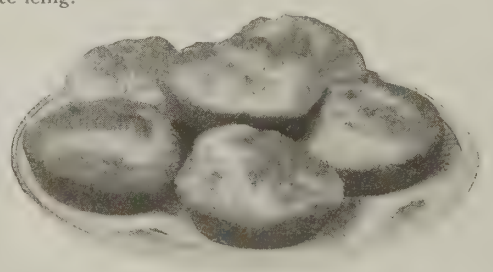
In many recipes requiring several eggs, excellent results may be obtained and considerable saving in cost realized by reducing the number of eggs or leaving them out altogether and using an additional quantity of **Royal Baking Powder,** about a teaspoon, for each egg omitted. The following recipes are given as practical illustrations.

CREAM LAYER CAKE

1 cup sugar
1 cup milk
2 cups flour
4 teaspoons Royal Baking Powder
1 egg
2 tablespoons shortening
1 teaspoon flavoring

The old method called for 3 eggs

DIRECTIONS:—Cream the sugar and shortening together, then mix in the egg. After sifting the flour and Royal Baking Powder together two or three times, add it all to the mixture. Gradually add the milk and beat with spoon until you have a smooth pour batter. Add the flavoring. Pour into greased layer cake tins and bake in a moderately hot oven for 20 minutes. This cake is best baked in two layers. Put together with cream filling and spread with white icing.



EGGLESS MUFFINS

2 cups flour
1 cup milk
4 teaspoons Royal Baking Powder
2 tablespoons shortening
2 tablespoons sugar
1 teaspoon salt

Makes 18 muffins

The old method for plain muffins called for 2 eggs

DIRECTIONS:—Mix and sift dry ingredients. Add milk, stirring until all lumps are out; add melted shortening. Beat well and bake in greased muffin tins in hot oven from 20 to 25 minutes.

Booklet of practical recipes which economize in eggs and other expensive ingredients mailed free on request. Address ROYAL BAKING POWDER CO., 104 Fulton St., New York.

Royal Baking Powder

Made from Cream of Tartar, derived from Grapes

No Alum **No Phosphate**

peasants who could not speak French. No wonder that his pathetic brown eyes always appeared full of tears. However, he followed Cockerell down the street and meekly embarked upon a contest with the lady inhabitants thereof, in which he was hopelessly outmatched from the start.

At the first door a dame of massive proportions but keen business instincts announced her total inability to accommodate *soldats,* but explained that she would be pleased to entertain *officiers* to any number. This is a common gambit. Twenty British privates in your attic, though extraordinarily well-behaved as a class, make a good deal of noise, buy little and leave mud everywhere. On the other hand, two or three officers give no trouble, and can be relied upon to consume and pay for unlimited omelets and bowls of coffee.

That seasoned vessel, Lieutenant Cockerell, turned promptly to the sergeant and corporal of C Company.

"Sergeant McNab," he said, "you and Corporal Downie will billet here." He introduced hostess and guests by an expressive wave of the hand. But shrewd madame was not to be bluffed.

"*Pas de sergents, monsieur le capitaine!*" she exclaimed. "*Officiers!*"

"*Ils sont officiers—sous-officiers,*" explained Cockerell, rather ingeniously, and moved off down the street.

At the next house the owner—a small wizened lady of negligible physique but great staying power—entered upon a duet with Alphonso which soon reduced that very moderate performer to breathlessness. He shrugged his shoulders feebly and cast an appealing glance toward the lieutenant.

"What does she say?" inquired Cockerell.

"She say dis 'ouse no good, sair! She 'ave seven children, and one *malade*—seek."

"Let me see," commanded the practical officer.

He insinuated himself as politely as possible past his reluctant opponent and walked down the narrow passage into the kitchen. Here he turned and inquired:

"Er—*où est la pauvre petite chose?*"

Madame promptly opened a door and displayed a little girl in bed—a very flushed and feverish little girl.

Cockerell grinned sympathetically at the patient, to that young lady's obvious gratification, and turned to the mother.

"*Je suis très triste,*" he said; "*j'ai grande miséricorde. Je ne placerai pas de soldats ici. Bonjour!*"

By this time he was in the street again. He saluted politely and departed, followed by the grateful regard of madame.

No special difficulties were encountered at the next few houses. The ladies at the house door were all polite; many of them were most friendly; but naturally each was anxious to get as few men and as many officers as possible—except the proprietress of an *estaminet,* who offered to accommodate the entire regiment. However, with a little tact here and a little firmness there, Master Cockerell succeeded in distributing C Company among some dozen houses.

One old gentleman, with a black alpaca cap and a six-days' beard, proprietor of a lofty establishment at the corner of the street, proved not only recalcitrant but abusive. With him Cockerell dealt promptly.

"*Çà suffit!*" he announced. "*Montrez-moi votre grenier!*"

The old man, grumbling, led the way up numerous rickety staircases, to the inevitable loft under the tiles. This proved to be a noble apartment, thirty feet long. From wall to wall stretched innumerable strings.

"We can get a whole platoon in here," said Cockerell contentedly. "Tell him, Alphonso. These people," he explained to Sergeant McNab, "always dislike giving up their lofts, because they hang their laundry there in winter. However, the old boy must lump it. After all, we're in this country for his health, not ours; and he gets paid for every man who sleeps here. That fixes C Company. Now for D! The other side of the street this time."

Quarters were found in due course for D Company; after which Cockerell discovered a vacant building lot which would serve for transport lines. An empty garage was marked down for the quartermaster's ration store, and the quartermaster sergeant promptly faded into its recesses with a grateful sigh. An empty shop in the Avenue Jean Jacques Rousseau, conveniently adjacent to battalion headquarters, was appropriated for that gregarious band, the regimental Signalers and Telephone section; while a suitable home for the Anarchists, or Bombers, together with their stock in trade, was found in the basemen of a remote dwelling on the outskirts of th area.

After this, Lieutenant Cockerell, lef alone with Alphonso and the orderly i charge of his horse, heaved a sigh of exhaus tion and transferred his attention from hi notebook to his watch.

"That finishes the rank and file," h said. "I breakfasted at four this morning and the battalion won't arrive for a coupl of hours yet. Alphonso, I am going to hav an omelet somewhere. I shall want yo in half an hour exactly. Don't go wander ing off for the rest of the day, pinching sof billets for yourself and the sergeant majo and your other pals, as you usually do!"

Alphonso saluted guiltily—evidently th astute Cockerell had touched the spot— and was turning away, when suddenly th billeting officer's eye encountered an illegi ble scrawl at the very foot of his list.

"Stop a moment, Alphonso! I have for gotten those condemned machine gunners as usual. *Strafe* them! Come on! Once more into the breach, Alphonso! There is a little side alley down here that we have not tried."

The indefatigable Cockerell turned down the Rue Gambetta, followed by Alphonso, faint but resigned.

"Here is the very place!" announced Cockerell almost at once. "This house, number five. We can put the gunners and their little guns into that stable at the back, and the officer can have a room in the house itself. Ring the bell—for the last time before lunch!"

The door was opened by a pleasant-faced young woman of about thirty, who greeted Cockerell—tartan is always popular with French ladies—with a beaming smile, but shook her head regretfully upon seeing the *billet de logement* in his hand. The inevitable dialectics with Alphonso followed. Presently Alphonso turned to his superior.

"Madame is ver' sorry, sair, but an *officier* is here already."

"Show me the *officier!*" replied the prosaic Cockerell.

The duet was resumed.

"Madame say," announced Alphonso presently, "that the *officier* is not here now; but he will return."

"So will Christmas! Meanwhile I am going to put an Emma Gee* officer in here." Alphonso's desperate attempt to translate the foregoing idiom into French was interrupted by madame's retirement into the house, whither she beckoned Cockerell to follow her. In the front room she produced a frayed sheet of paper, which she proffered with an apologetic smile. The paper said:

"This billet is entirely reserved for the supply officer of this district. It is not to be occupied by troops passing through the town. BY ORDER."

Lieutenant Cockerell whistled softly and vindictively through his teeth.

"Well," he said, "for consummate and concentrated nerve give me the underlings of the Army Service Corps! This pot-bellied blighter not only butts into an area which doesn't belong to him, but actually leaves a chit to warn people off the grass even when he isn't here! He hasn't signed the document, I observe. That means that he is a newly joined subaltern, trying to get mistaken for a brass hat! I'll fix him!"

With great stateliness Lieutenant Cockerell tore the offending screed into four portions, to the audible concern of madame. But the lieutenant smiled reassuringly upon her.

"*Je vous donnerai un autre, vous savez,*" he assured her.

He sat down at the table, tore a leaf from his field-service pocketbook and wrote:

"The supply officer of the district is at liberty to occupy this billet only at such times as it is not required by the troops of the combatant services.

"Signed, F. J. COCKERELL, Lt. & Ass. Adj.,
"7th B. & W. Highes."

"That's a pretty nasty one!" he observed with relish. Then, having pinned the insulting document conspicuously to the mantelpiece, he observed to the mystified lady of the house:

"*Voilà, madame.* I shall see this bloke when he turns up, myself! *Bonjour!*"

And with this dark saying Sparrow Cockerell took his departure.

The battalion, headed by their tatterdemalion pipers, stumped into the town in due course and were met on the outskirts

*Emma Gee, or M. G., stands for machine gun.

(Continued on Page 57)

STETSON HATS

HAVE you ever thought of the desirability of owning a Stetson Derby, a Soft Hat—and possibly a very *light weight* Negligee?

Each of the types illustrated has a very definite use:

The Stetson feature hat—a *Soft Hat* which comes naturally to most men for business and general wear.

The *Derby*—for formal occasions—is more and more in favor with careful dressers.

The light weight *Negligee* hat—always popular when a man has time to play.

All can find a place in the complete wardrobe—just as important as your alternative suits, shoes, shirts and cravats.

Wherever you find the Stetson wearer you meet a man who appreciates a good hat, who knows the comfort and satisfaction which comes from the use of materials of the highest quality and the touch of the master craftsman.

Style is good form only when it keeps a man *individual*. The fact that there is not only one Stetson for every occasion *but several*, and each authentic, puts the Stetson wearer in a class by himself if he so chooses.

The Stetson dealer has authority behind his suggestion for your Easter hats. His stock of Stetsons will give you ample choice, and the better the quality the more comfort you will have from your Stetson.

JOHN B. STETSON COMPANY
PHILADELPHIA

Make this Chart your guide

Look for it on your dealer's wall

Your oil runs low. You stop for a fresh supply.

You now come to a vital question. What oil will the dealer pour into your oil-reservoir? Will it be just "oil"—or will it be the correct lubricant for *your* engine?

Among thousands of dealers this is what happens:

The dealer recognizes the make of your car—and the year's model. He runs his finger down the Vacuum Oil Company's Chart (shown above in miniature) until he finds your car's make and model. Then he supplies you with the grade of Gargoyle Mobiloils specified for your car by the Chart. This oil will effectively seal your piston rings against power-waste, gasoline-waste and oil-waste.

Why are thousands of dealers placing such reliance in this Chart?

Experience has taught them that something like 50% of all engine troubles are due to incorrect lubrication.

They realize that scientific lubrication is a problem for specialists. Since the dealer has neither time nor equipment for studying this intricate subject he draws on the experience of a recognized authority.

That is why you find on his walls the large Chart of Recommendations, issued by the Vacuum Oil Company.

If you inquire about the Chart you will find this:

The Vacuum Oil Company for 50 years have specialized in scientific lubrication. Today their world-wide leadership in lubrication matters is unquestioned in scientific circles.

For years their Chart of Recommendations has been recognized as the only standard guide to correct automobile lubrication.

In keeping this Chart up to date, each new model of every automobile is carefully analyzed. This work involves lengthy and painstaking engineering study by the Vacuum Oil Company's Board of Engineers. The recommendations of this Chart are proven correct by repeated practical tests.

But nothing has given dealers such faith in this Chart as their experience with the oils themselves. For no one knows better than the dealer how difficult it is to secure efficient lubrication—and how much efficient lubrication means.

Write for new 56-page booklet containing complete discussion of your lubrication problems, list of troubles with remedies and complete Charts of Recommendations for Automobiles, Motorcycles, Tractors and Marine Engines.

Mobiloils

A grade for each type of motor

In buying Gargoyle Mobiloils from your dealer, it is safest to purchase in original packages. Look for the red Gargoyle on the container. If the dealer has not the grade specified for your car, kindly write our nearest branch, giving dealer's name and address.

VACUUM OIL COMPANY, Rochester, N. Y., U. S. A.

Specialists in the manufacture of high-grade lubricants for every class of machine. Obtainable everywhere in the world.

Domestic Branches: Detroit New York Philadelphia Minneapolis Boston Chicago Indianapolis Pittsburgh Kansas City, Kan. Des Moines

Correct Automobile Lubrication

Explanation—The four grades of Gargoyle Mobiloils, for engine lubrication, purified to remove free carbon, are:

Gargoyle Mobiloil "A"
Gargoyle Mobiloil "B"
Gargoyle Mobiloil "E"
Gargoyle Mobiloil "Arctic"

In the Chart below, the letter opposite the car indicates the grade of Gargoyle Mobiloils that should be used. For example, "A" means Gargoyle Mobiloil "A," "Arc." means Gargoyle Mobiloil "Arctic," etc. The recommendations cover all models of both pleasure and commercial vehicles unless otherwise noted.

Electric Vehicles: For motor bearings and enclosed chains use Gargoyle Mobiloil "A" the year 'round. For open chains and differential, use Gargoyle Mobiloil "C" the year 'round.

Exception: For *winter lubrication* of pleasure cars use Gargoyle Mobiloil "Arctic" for worm drive and Gargoyle Mobiloil "A" for bevel gear drive.

(Continued from Page 54)

by the billeting party, who led the various companies to their appointed place. After inspecting their new quarters and announcing with gloomy satisfaction that they were the worst, dirtiest and most uncomfortable yet encountered, everybody settled down in the best place he could find and proceeded to make himself remarkably snug.

Battalion headquarters and the officers of A Company were billeted in an imposing mansion which actually boasted a bathroom. It is true that there was no water, but this deficiency was soon made good by a string of officers' servants bearing buckets. Beginning with Colonel Kemp, who was preceded by an orderly bearing a small towel and a large loofah, each officer performed a ceremonial ablution; and it was a collection of what Major Wagstaffe, the second in command, termed "bright and bonny young faces" which collected round the mess table at seven o'clock.

It was in every sense a gala meal. First, it was weeks since anyone—except Second Lieutenant McCorquodale, newly joined and addressed, for painfully obvious reasons, as Tiny—had found himself at table in an apartment where it was possible to stand upright. Secondly, the mess president had coaxed glass tumblers out of the ancient *concierge;* and only those who have drunk from army ironware for weeks on end can appreciate the pure joy of escape from the indeterminate metallic flavor which such vessels impart to all beverages. Thirdly, these same tumblers were filled to the brim with inferior but exhilarating champagne, purchased—as they euphemistically put it in the supply column—locally. Lastly, the battalion had several months of hard fighting behind it, probably a full month's rest before it, and the conscience of duty done and recognition earned floating like a halo above it. For the moment memories of Nightmare Wood and the Kidney Bean Redoubt—more especially the latter—were effaced. Even the sorrowful gaps in the ring round the table seemed less noticeable.

The menu, too, was almost pretentious. First came the *hors d'œuvre*—a tin of sardines. This was followed by what the mess corporal described as a savory omelet, but which the second in command condemned as "a regrettable incident."

"It is false economy," he observed dryly to the mess president, "to employ mark-one* eggs as anything but hand grenades."

However, the tide of popular favor turned with the haggis, contributed by Lieutenant Angus McLachlan, from a parcel from home. Even the fact that the mess cook, an inexperienced æsthete from Islington, had endeavored to tone down the naked repulsiveness of the dainty with discreet festoons of tinned macaroni failed to arouse the resentment of a purely Scottish mess. The next course—the beef ration, hacked into the inevitable gobbets and thinly disguised by a sprinkling of curry powder—aroused no enthusiasm; but the unexpected production of a large tin of Devonshire cream, contributed by Captain Bobby Little, relieved the canned peaches of their customary monotony. Last of all came a savory—usually described as the savory—consisting of a raft of toast a person, each raft carrying an abundant cargo of fried potted meat and provided with a passenger in the shape of a recumbent sausage.

A compound of grounds and dishwater, described by the optimistic mess corporal as coffee, next made its appearance, mitigated by a bottle of liqueur and a box of panetelas; and the mess turned itself to more intellectual refreshment. A heavy and long-overdue mail had been found waiting at St. Gregoire. Letters had been devoured long ago. Now each member of the mess leaned back in his chair, straightened his weary legs under the table and settled down, cigar in mouth, to the perusal of the Spectator or the Tattler, according to rank and literary taste.

Colonel Kemp, unfolding a week-old Times, looked over his glasses at his torpid disciples.

"Where is young Sandeman?" he inquired. Young Sandeman was the adjutant.

"He went out to the orderly room, sir, five minutes ago," replied Bobby Little.

"I only want to give him to-morrow's orders. No doubt he'll be back presently. I may as well mention to you fellows that I propose to allow the men three clear days' rest, except for bathing and reclothing. After that we must do company drill, good and hard, so as to polish up the new draft, who are due to-morrow. I am going to start a bombing school too; at least seventy-five per cent of the battalion ought to pass the test before we go back to the line. However, we need not rush things. We should be here in peace for at least a month. We must get up some sports, and I think it would be a sound scheme to have a sing-song one Saturday night. I was just saying, Sandeman"—this to the adjutant, who reëntered the room at that moment—"that it would be a sound ——"

The adjutant laid a pink field-telegraph slip before his superior.

"This has just come in from brigade headquarters, sir," he said. "I have sent for the sergeant major."

The colonel adjusted his glasses and read the dispatch. A deathly sickening silence reigned in the room. Then he looked up.

"I am afraid I was a bit previous," he said quietly. "The Royal Stickybacks have lost the Kidney Bean, and we are detailed to go up and retake it. Great compliment to the regiment, but a trifle mistimed! You young fellows had better go to bed. Parade at four A. M. sharp! Good night! Come along to the orderly room, Sandeman."

The door closed and the mess, grinding the ends of their cigars into their coffee cups, heaved themselves resignedly to their aching feet.

"There ain't," quoted Major Wagstaffe, "no word in the blooming language for it!"

The Kidney Bean Redoubt is the key to a very considerable sector of trenches. It lies just behind a low ridge. The two horns of the bean are drawn back out of sight of the enemy, but the middle swells forward over the skyline and commands an extensive view of the country beyond. Direct observation of artillery fire is possible; consequently an armored observation post has been constructed here, from which gunner officers can direct the fire of their batteries with accuracy and elegance. Lose the Kidney Bean and the boot is on the other leg. The enemy has the upper ground now; he can bring observed artillery fire to bear upon all our tenderest spots behind the line. He can also enfilade our front-line trenches.

Well, as already stated, the Seventeenth Royal Stickybacks had lost the Kidney Bean. They were a battalion of recent formation, stout-hearted fellows all, but new to the refinements of intensive trench warfare. When they took over the sector, they proceeded to leave undone various vital things which the Seventh had always made a point of doing and to do various unnecessary things which the Seventh had never done. The observant Hun promptly recognized that he was faced by a fresh batch of opponents, and, having carefully studied the characteristics of the newcomers, prescribed and administered an exemplary dose of frightfulness. He began by tickling up the Stickybacks with an unpleasant engine called the *Minenwerfer*, which dispatches a large, sausage-shaped projectile, in a series of ridiculous somersaults, high over No Man's Land into the enemy's front-line trench, where it explodes and annihilates everything in that particular bay. Upon these occasions one's only chance of salvation is to make a rapid calculation as to the bay into which the sausage is going to fall and then, to double speedily round a traverse—or, if possible, two traverses—into another. It is an exhilarating pastime, but presents complications when played by a large number of persons in a restricted space, especially when the persons aforesaid are not unanimous as to the ultimate landing place of the projectile.

After a day and a night of these aërial torpedoes, the Hun proceeded to an intensive artillery bombardment. He had long coveted the Kidney Bean, and instinct told him that he would never have a better opportunity of capturing it than now. Accordingly, two hours before dawn, the redoubt was subjected to a sudden, simultaneous and converging fire from all the German artillery for many miles round, the whole being topped up with a rain of those crowning instruments of demoralization—gas shells. At the same time an elaborate curtain of shrapnel and high explosive was let down behind the redoubt, to serve the double purpose of preventing either the sending up of reënforcements or the temporary withdrawal of the garrison.

The Oscar Saenger Course in Vocal Training for any of the voices mentioned above, may be procured from any Victor dealer at $25—the cost of a *one-hour* lesson at the Saenger Studio in New York.

The Victor Records of the Oscar Saenger Course in Vocal Training will be the means of developing thousands of voices and new musical talent all over the world. Such development will not in future be a question of large financial risk and long periods of study away from home, because this training is as effective on the farm as it is in the studios of any big cities.

To schools and colleges, to such organizations as the Y. M. C. A. and Y. W. C. A., this course will be a welcome adjunct to other educational features.

It will be of great value to music teachers in the smaller towns and cities far removed from the great musical centers, by enabling them to measure their own work and illustrate their own ideas.

In throwing a new light on all that has to do with song and singing, this new course will bring about a wider understanding and appreciation of music on the part of the public. Musical clubs will have endless opportunities for the most exhaustive and detailed exposition of the art of song.

The Oscar Saenger Course in Vocal Training is within the reach of all, for it involves a relatively small outlay and demands nothing more than conscientious study along prescribed lines.

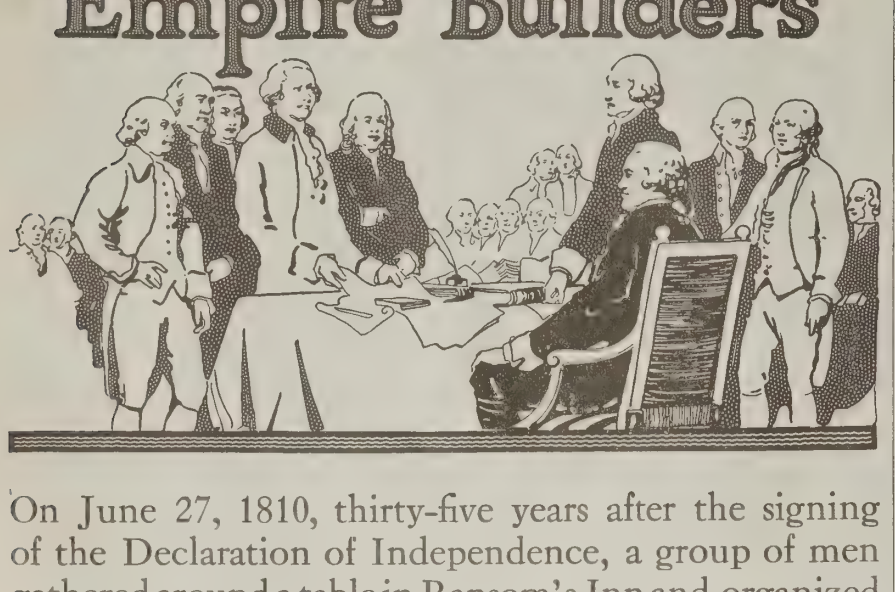
Founded by Empire Builders



On June 27, 1810, thirty-five years after the signing of the Declaration of Independence, a group of men gathered around a table in Ransom's Inn and organized the Hartford Fire Insurance Company of Hartford, Conn. They were men of the same character and affiliations as the founders of the United States—business men, mayors, governors, members of the legislature and of Congress—and as Jefferson and his associates planned the foundations of the United States of America, so Nathaniel Terry and his associates laid a firm basis for the

INSURANCE *Service* OF THE TWO HARTFORDS

The Hartford Fire Insurance Company and the Hartford Accident and Indemnity Company write practically every form of insurance except life insurance. For over a century Hartford losses have been fairly and promptly paid. Descendants of the Hartford's founders are still stockholders in the company today. The same high standards of financial strength and integrity have been responsible for the Hartford's steady growth through all these years.

Are you fully insured? Look over the list below and check the forms of insurance which interest you. Ask your agent or broker to get you a Hartford policy, or write to us and we will tell you the name and address of an agent who can give you rates and particulars.

(Continued from Page 57)

At the first streak of dawn the bombardment was switched off, as if by a tap; the curtain fire was redoubled in volume; and a massed attack swept across the disintegrated wire into the shattered and pulverized redoubt. Other attacks were launched on either flank; but these were obvious blinds, intended to prevent a too concentrated defense of the Kidney Bean. The Royal Stickybacks—what was left of them—put up a tough fight; but half of them were lying dead, or buried, or both, before the assault was launched, and the rest were too dazed and stupefied by noise and chlorine gas to withstand—much less to repel—the overwhelming phalanx that was hurled against them. One by one they went down, until the enemy's troops, having swamped the redoubt, gathered themselves up in a fresh wave and surged toward the reserve-line trenches, four hundred yards distant. Here, however, they met a strong counter attack, launched from the brigade reserve, and, after heavy fighting, were bundled back into the redoubt itself. Here the German machine guns had staked out a defensive line, and the German retirement came to a standstill.

Meanwhile a German digging party, many hundred strong, had been working madly in No Man's Land, striving to link up the newly acquired ground with the German lines. By the afternoon the Kidney Bean was not only "reversed and consolidated," but it was actually included in the enemy's front-trench system. Altogether a well planned and admirably executed little operation.

Forty-eight hours later the Kidney Bean redoubt was recaptured, and remains in British hands to this day. Many arms of the service took honorable part in the enterprise—heavy guns, field guns, trench mortars, machine guns; sappers and pioneers; infantry in various capacities. But this narrative is concerned only with the part played by the Seventh.

"Sorry to pull you back from rest, colonel," said the brigadier, when the commander of the Seventh reported; "but the divisional general considers that the only feasible way to hunt the Boche from the Kidney Bean is bomb him out of it. That means trench fighting, pure and simple. I have called you up because you fellows know the ins and outs of the Kidney Bean as no one else does. The brigade who are in the line just now are quite new to the place. Here is an aëroplane photograph of the redoubt, as newly constituted. Tell off your own bombing parties; make your own dispositions; send me a copy of your provisional orders; and I will fit my plan in with yours! The corps commander has promised to back you with every gun, trench mortar, culverin and arquebus in his possession."

In due course battalion orders were issued and approved. They dealt with operations most barbarous, amid localities of the most homelike sound. Number Nine Platoon, for instance—commander, Lieutenant Cockerell—was to proceed in single file, carrying so many grenades per man, up Charing Cross Road, until stopped by the barrier which the enemy were understood to have erected in Trafalgar Square, where a bombing post and at least one machine gun would probably be encountered. At this point they were to wait until Trafalgar Square had been suitably dealt with by a trench mortar. Here followed a paragraph addressed exclusively to the Trench Mortar Officer. After this the bombers of Number Three Platoon would cross the Square and bomb their way up the Strand. Another party would clear Northumberland Avenue, while a Lewis gun raked Whitehall, and so on. Every detail was thought out, down to the composition of the parties which were to clean up afterward—that is, extract the reluctant Boche from various underground fastnesses well known to the extractors. The whole enterprise was then thoroughly rehearsed in some dummy trenches behind the line, until everyone knew his exact part. Such is modern warfare.

Next day the Kidney Bean redoubt was in British hands again. The Hun—what was left of him after an intensive bombardment of twenty-four hours—had betaken himself back over the ridge, via the remnants of his two new communication trenches, to his original front line. The two communication trenches themselves were blocked and sand-bagged and were being heavily supervised by a pair of British machine guns. Fighting in the redoubt itself had almost ceased, though a humorous sergeant, followed by acolytes bearing bombs, was still combing out certain residential districts in the center of the maze. Ever and anon he would stoop down at the entrance of some deep dugout, and bawl:

"Ony mair doon there? Come away, Fritz! I give ye five seconds! Yin—twa—three ——"

Then, with a rush like a bolt of rabbits, two or three close-cropped, grimy Huns would scuttle up from below and project themselves from one of the exits, to be taken in charge by grinning Caledonians, wearing tin hats very much awry, and escorted back through the barrage to the prisoners' base in rear.

All through the day, amidst unremitting shell fire and local counter attack, the Seventh reconsolidated the Kidney Bean; and they were so far successful that when they handed over the work to another battalion at dusk, the parapet was restored, the machine guns were in position, and a number of knife-rest barbed-wire entanglements were lying just behind the trench, ready to be hoisted over the parapet and joined together in a continuous defensive line as soon as it was sufficiently dark.

One by one the members of Number Nine Platoon squelched—for it had rained hard all day—back to the reserve line. They were utterly exhausted and still inclined to feel a little aggrieved at having been pulled out from rest; but they were well content. They had done the state some service, and they knew it; and they knew that the higher powers knew it too. There would be some very flattering reading in divisional orders in a few days' time.

Meanwhile, their most pressing need was for something to eat. To be sure, every man had gone into action that morning carrying his day's rations. But the British soldier, improvident as the grasshopper, carries his day's rations in one place and one place only—his stomach. The Seventh had eaten what they required at their extremely early breakfast; the residue thereof they had abandoned.

About midnight Master Cockerell, in obedience to a most welcome order, led the remnants of his command, faint but triumphant, back from the reserve line to a road junction two miles in the rear, known as Dead Dog Corner. Here the battalion was to rendezvous and march back by easy stages to St. Gregoire. Their task was done.

But at the crossroads Number Nine Platoon found no battalion—only a solitary subaltern with his orderly. This young Casabianca informed Cockerell that he, Second Lieutenant Candlish, had been left behind to bring in stragglers.

"Stragglers?" exclaimed the incensed Cockerell. "Do we look like stragglers?"

"No," replied the youthful Candlish frankly; "you look more like sweeps. However, you had better push on. The battalion isn't far ahead. The order is to march straight back to St. Gregoire and reoccupy former billets."

"What about rations?"

"Rations? The quartermaster was waiting here for us when we rendezvoused, and every man had a full ration and a tot of rum." Number Nine Platoon cleared their parched throats expectantly. "But I fancy he has gone on with the column. However, if you leg it you should catch them up. They can't be more than two miles ahead. So long!"

But the task was hopeless. Number Nine Platoon had been bombing, hacking and digging all day. Several of them were slightly wounded—the serious cases had been taken off long ago by the stretcher bearers—and Cockerell's own head was still dizzy from the fumes of a German gas shell.

He lined up his disreputable paladins in the darkness and spoke:

"Sergeant McNab, how many men are present?"

"Eighteen, sir-r." The platoon had gone into action thirty-four strong.

"How many men are deficient of an emergency ration? I can make a good guess, but you had better find out."

Five minutes later the sergeant reported. Cockerell's guess was correct. The British private has only one point of view about the portable property of the state. To him, as an individual, the sacred emergency ration is an unnecessary encumbrance, and the carrying thereof a fatigue. Consequently, when engaged in battle, one of the first—of many—things which he jettisons is this very ration. When all is over he reports with unctuous solemnity that the provender

in question has been blown out of his haversack by a shell. The quartermaster sergeant writes it off as "lost owing to the exigencies of military service," and indents for another.

Lieutenant Cockerell's haversack contained a packet of meat lozenges and about half a pound of chocolate. These were presented to the sergeant.

"Hand these round as far as they will go, sergeant," said Cockerell. "They'll make a mouthful a man, anyhow. Tell the platoon to lie down for ten minutes; then we'll push off. It's only fifteen miles. We ought to make it by breakfast time!"

Slowly, mechanically, all through the winter night the victors hobbled along. Cockerell led the way, carrying the rifle of a man with a wounded arm. Occasionally he checked his bearings with map and electric torch. Sergeant McNab, who, under a hirsute and attenuated exterior, concealed a constitution of ferro-concrete and the heart of a lion, brought up the rear, uttering fallacious assurances to the faint-hearted as to the shortness of the distance now to be covered, and carrying two rifles.

The customary halts were observed. At ten minutes to four the men flung themselves down for the third time. They had covered about seven miles and were still eight or nine from St. Gregoire. The everlasting constellation of Verey lights still rose and fell upon the eastern horizon behind them, but the guns were silent.

"There might be a heavy battery dug in somewhere about here," mused Cockerell. "I wonder if we could touch them for a few tins of bully beef. Hello! What's that?"

A distant rumble came from the north, and out of the darkness loomed a British motor lorry, lurching and swaying along the rough cobbles of the *pavé*. Some of Cockerell's men were lying dead asleep in the middle of the road, right at the junction. The lorry was going twenty miles an hour.

"Get into the side of the road, you men," shouted Cockerell, "or they'll run over you! You know what these motor transport drivers are!"

With indignant haste, and at the last possible moment, the kilted figures scattered to either side of the narrow causeway. The usual stereotyped and vitriolic remonstrances were hurled after the great hooded vehicle as it lurched past.

And then a most unusual thing happened: The lorry slowed down and finally stopped, a hundred yards away. An officer descended and began to walk back. Cockerell rose to his weary feet and walked to meet him.

The officer wore a major's crown upon the shoulder straps of his sheepskin-lined British Warm, and the badge of the Army Service Corps upon his cap. Cockerell, indignant at the manner in which his platoon had been hustled off the road, saluted stiffly and muttered:

"Good morning, sir!"

"Good morning!" said the major. He was a stout man of nearly fifty, with twinkling blue eyes and a short-clipped mustache. Cockerell judged him to be one of the few remnants of the original British Army.

"I stopped," explained the older man, "to apologize for the scandalous way that fellow drove over you. It was perfectly damnable; but you know what these converted taxi drivers are! This swine forgot for the moment that he had an officer on board and hogged it as usual. He goes under arrest as soon as we get back to billets."

"Thank you very much, sir," said Master Cockerell, entirely thawed. "I'm afraid my chaps were lying all over the road, but they are pretty well down and out at present."

"Where have you come from?" inquired the major, turning a curious eye upon Cockerell's prostrate followers.

Cockerell explained. When he had finished, he added wistfully: "I suppose you have not got an odd tin or two of bully to give away, sir? My fellows are about ——"

For answer the major took the lieutenant by the arm and led him toward the lorry.

"You have come," he announced, "to the very man you want. I am practically a department store. In fact, I am a brigade supply officer. How would a Maconochie ration apiece suit your boys?"

Cockerell, repressing the ecstatic phrases which crowded to his tongue, replied that that was just what the doctor had ordered.

"Where are you bound for?" continued the major.

"St. Gregoire."

"Of course. You were pulled out from there, weren't you? I am going to St. Gregoire myself as soon as I have finished my round. Home to bed, in fact. I haven't had any sleep worth writing home about for four nights. It is no joke tearing about a country full of shell holes, hunting for a brigade that has shifted its ration dump seven times in four days. However, I suppose things will settle down again, now that you fellows have fired Brother Boche out of the Kidney Bean. Pretty fine work too. Tell me: what is your strength, here and now?"

"One officer," said Cockerell soberly, "and eighteen men."

"All that's left of your platoon?"

Cockerell nodded. The stout major began to beat upon the tailboard of the lorry with his stick.

"Sergeant Smurthwaite!" he shouted.

There came a muffled grunt from the recesses of the lorry. Then a round and ruddy face rose like a harvest moon above the tailboard, and a stertorous voice replied respectfully:

"Sir?"

"Let down this tailboard; load this officer's platoon into the lorry; issue them with a Maconochie and a tot of rum apiece; and don't forget to put Smee under arrest for dangerous driving when we get back to billets."

"Very good, sir."

Ten minutes later the survivors of Number Nine Platoon, soaked to the skin, dazed, slightly incredulous, but at peace with all the world, reclined, closely packed, upon the floor of the swaying lorry. Each man held an open tin of Mr. Maconochie's admirable ration between his knees. Perfect silence reigned.

A pleasant aroma of rum mellowed the already vitiated atmosphere.

In front, beside the chastened Mr. Smee, sat the major and Master Cockerell. The latter had just partaken of his share of refreshment and was now endeavoring, with lifeless fingers, to light a cigarette.

The major scrutinized his guest intently. Then he stripped off his British Warm coat—incidentally revealing the fact that he wore upon his tunic the ribbons of both South American Medals and the Distinguished Service Order—and threw it round Cockerell's shoulders.

"I'm sorry, boy!" he said. "I never noticed. You are chilled to the bone. Button this round you!"

Cockerell made a feeble protest, but was cut short.

"Nonsense! There's no sense in taking risks after you've done your job."

Cockrell assented, a little sleepily. His allowance of rum was bringing its usual vulgar but comforting influence to bear upon an exhausted system.

"I see you have been wounded, sir," he observed, noting with a little surprise two gold stripes upon his host's left sleeve—the sleeve of a noncombatant!

"Yes," said the major. "I got the first one at Le Cateau. He was only a little fellow; but the second, which arrived at the second show at Ypres, gave me such a stiff leg that I am only an old crock now. I was second in command of an infantry battalion in those days. In these I am only a peripatetic Lipton. However, I'm lucky to be here at all; I've had twenty-seven years' service. How old are you?"

"Twenty," replied Cockerell. He was too tired to feel as ashamed as he usually did at having to confess to the tenderness of his years.

The major nodded thoughtfully.

"Yes," he said; "I judged that would be about the figure. My son would have been twenty this month, only—he was at Neuve Chapelle. He was very like you in appearance—very. His mother would have been interested to meet you. You might as well take a nap for half an hour. I have two more calls to make, and we shan't get home till nearly seven. Lean against me, old man! I'll see you don't tumble overboard."

So Lieutenant Cockerell, conqueror of the Kidney Bean, fell asleep, his head resting, with scandalous disregard for military etiquette, upon the shoulder of the stout major.

An hour or two later, Number Nine Platoon, distended with concentrated nourishment and painfully straightening its cramped limbs, decanted itself from the lorry into a little *cul-de-sac* opening off the Avenue Jean Jacques Rousseau in St. Gregoire. The name of the *cul-de-sac* was the Rue Gambetta.

Their commander, awake and greatly refreshed, looked round him and realized, with a sudden sense of uneasiness, that he was in familiar surroundings.

The lorry had stopped at the door of Number Five.

"I don't suppose your battalion will get back for some time," said the major. "Tell your sergeant to put your men into the stable behind this house—there's plenty of straw there—and ——"

"Their own billet is just round the corner, sir," replied Cockerell. "They might as well go there, thank you."

"Very good. But come in with me yourself and doze here for a few hours. You can report to your C. O. later in the day, when he arrives. This is my *pied à terre*"—rapping on the door. "You won't find many billets like it. As you see, it stands in this little backwater and is not included in any of the regular billeting areas of the town. The town major has allotted it to me permanently. Pretty decent of him, wasn't it? And Madame Vinot is a dear. Here she is! *Bonjour, Madame Vinot! Avez vous un feu—er—inflammé pour moi dans la chambre?*" Evidently the major's French was on a par with Cockerell's.

But madame understood him, bless her!

"*Mais oui, m'sieur le colonel!*" she exclaimed cheerfully—the rank of major is not recognized by the French civilian population—and threw open the door of the sitting room, with a glance of compassion upon the major's mud-splashed companion, whom she failed to recognize.

A bright fire was burning in the open stove. Immediately above, pinned to the mantelpiece and fluttering in the draft, hung Cockerell's manifesto upon the subject of noncombatants. He could recognize his own handwriting across the room. The major saw it too.

"Hello, what's that hanging up, I wonder!" he exclaimed. "A memorandum for me, I expect; probably from my old friend Dados.* Let us get a little more light!"

He crossed to the window and drew up the blind. Cockerell moved too. When the major turned round his guest was standing by the stove, his face scarlet through its grime.

"I'm awfully sorry, sir," said Cockerell, "but that notice—memorandum—of yours has dropped into the fire."

"If it came from Dados," replied the major, "thank you very much!"

"I can't tell you, sir," added Cockerell humbly, "what a fool I feel."

But the apology referred to an entirely different matter.

GOODYEAR

AKRON

THE NET OF THE PROPOSITION

AS far back as 1904, we realized the limitations of the fabric tire.

Designed to resist simultaneously pressure from within and punishment from without, its chiefest virtue was at once its sternest foe.

That the unbending strength of its carcass—the strength of hardy fiber gripped and reinforced by tight cross-weave—gravely hampered its efficiency, we knew and strove to remedy.

And the tire which we believe today most closely approximates final perfection—the Goodyear Cord Tire—grew out of this endeavor.

It must not be inferred that the fabric tire was not a good tire. It was a very good tire, and is still.

It was stout and staunch and serviceable; it disencumbered random transportation of its most serious impediment; it localized all distance, and gave the motor car its first seven-league boots.

But in exercising the dual resistance intended by its makers, the fabric tire sacrificed some things.

It fell short of the ultimate in speed, due to the rigidity of its construction; it suffered frequent mishap, from the same cause; it taxed power and fuel unnecessarily, and it grudged complete comfort.

These are minor disadvantages, it is true, and inconsiderable perhaps in view of the fabric tire's immense usefulness, but they are disadvantages none the less.

It was to overcome them—to foster and amplify the fabric tire's virtues while excluding its faults—that the type of construction was contrived then which now has reached its highest development in the Goodyear Cord Tire.

The aim of this construction is the preservation of the fabric tire's strength in combination with an unparalleled resilience—that comfort shall match mileage, that speed shall join with security, that activity shall equal endurance, that economy shall accompany satisfaction.

To this end Goodyear Cord Tires are made strong and supple both—stalwart and spry. Unlike the fabric tire they do not fight the road, but yield and recover under impact, *absorbing* shocks, not resisting them.

They are built up of thousands of tightly-twisted, long-fibre cords, densely strong, established in the tire structure layer upon layer *without interweave*—many layers, of pliant cords.

Each cord and each layer is insulated and upholstered with a springy cushion of pure rubber—each cord and each layer is free to exercise, flex and recover independently of the rest, without contact, without friction.

To the multiplied stoutness of the cords thus is joined the unhampered elasticity of quick rubber, and over all is treaded a fine-grained, wear-resisting, amazingly vigorous stock, in both the big-blocked All-Weather and easy-steering Ribbed tread designs.

More material is used in this peculiar Goodyear construction, more labor is needed, more cost is inevitable—but the result is worth it.

For the result is—a tire so strong that it is ably defended against stone-bruise, puncture or blow-out; so flexible that comfort rides above it wherever it travels; so enduring that under the grind and burn of the race course it seldom falters; so simply and expertly made that in case of accident it can be repaired permanently by any repairman.

A tire that will last you longer, carry you faster, deliver you more mileage from every gallon of gasoline, protect your satisfaction, and redeem your investment.

A tire whose quality makes it higher-priced—and *better*.

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

THE PULLMAN COMPANY

Coast to Coast. Through the far-reaching service of the Pullman Company it is often possible to arrange a railroad journey so that the night may be spent on the train, thus effecting a saving in hotel accommodations and the hours often unnecessarily used for daytime travel.

The Pullman car includes in its construction not only the asset of increased safety, but every convenience afforded by the most modern hotel that can possibly be adapted to the limitations of car construction. And the service further includes the personal attention of employés trained to anticipate the individual requirements of the traveling public.

In the deserts of the Southwest; in the western mountains; in rural communities throughout the country, everywhere, regardless of local conditions, the traveler today can obtain, wherever he may board a Pullman, the same high standard of service that he would find in a Pullman car leaving the terminal of the great metropolis.

Standardized and extended to serve in equal measure travelers in practically every community, the facilities which the Pullman Company affords for convenience, safety and comfort are equalled by no other similar organization in the world.

UP AND DOWN

(Continued from Page 28)

themselves, and that their customers were banks and capitalists. The brokers brought to active business in one city money, desiring investment, lying idle in another part of the country. They were media through which credit might be interchanged among different communities. But at that time the house which had agreed to fund twenty thousand dollars of our indebtedness for a fee of only fifty dollars seemed to me to be operating on much too small a margin of profits to make any money. As a manufacturer I was always used to figuring safely. I did not believe until I saw the check that the brokers would really make the loan.

We cleaned up at our depository as had been planned. Two months later we started borrowing there again. The vice president, with whom our business was transacted, welcomed us as applicants for discounts. I had overcome my earlier feeling of awe when I approached that officer's desk at the bank. I now was as nonchalant when I shook hands with a banker as when I greeted any other acquaintance. I had no fear of my creditors. I knew I was good for more than my debts. The monthly statements of profits my partner prepared, and which I signed as president of the corporation, were all true for several years. The rating our company had was only what our worth entitled us to; the business was growing. I considered myself a prosperous man—as I was, in fact.

My partner seldom mentioned to me his individual business affairs. But I believed he was very successful in all his multifarious undertakings. He told me one day that he intended to sever his connection with the bank, where he had been head of the trust department. He announced he was about to be elected president of another, smaller bank. It was his desire that our company should transfer its account to the depository of which he expected to become the executive. He told me we should be given the same discount line we had been granted by the other bank and as much more credit as the development of the business warranted.

Of course I assented to the transfer, very much pleased that the new bank would be so intimately acquainted with our concern. In a few weeks my partner resigned his old position and moved into the president's office of the smaller financial institution. In a distant, cold way he was proud of his elevation. I congratulated him warmly on the honor he had attained. But in a little while I came to resent the attitude he now adopted. He acted aloof when he talked to me, as if he were on a much higher plane in the business world than I myself. There had been no friendliness before; but after he became a bank president the relations between my partner and myself were only rigidly courteous.

The Financial End

He knew banking thoroughly and he understood human nature. But he had acquired all his knowledge with his brain; none of it through his heart. His highest ambition was to be recognized as a leader among the city's financiers. He took pride in our manufacturing company because it was making money. But when he visited the factory he seldom set foot in the shop. That was dirty, noisy, and full of uncouth workmen. There was no rhythm, to him, in the punch presses; no songs, but only screeching, in the shifting belts of screw machines and lathes. He irritated me every time he did go through the shop. It was his habit to stalk past a man in overalls haughtily, as if he did not see him. He would tuck the skirts of his long-tailed coat about his legs whenever he walked close to an oily machine that was making dollars for him. Without any sharp provocation, my lack of liking for the man intensified to definite dislike.

We did not see each other often now. He was busy with his ambitions in the financial district, where I did not go once in three months. Weeks would pass between our meetings. I knew he was interested only in our making earnings that he could translate into monthly statements of assets and liabilities, with tabulations of comparative profits. Our sales were increasing steadily. We were shipping a third of a million dollars' worth of goods a year. We had a fine factory, fully equipped. On our books were accounts receivable amounting to over seventy-five thousand dollars. We had a valuable stock of raw material and finished products in our storeroom.

Our indebtedness for borrowed money, however, had grown pretty large. Most of the time we owed about a hundred thousand dollars on our notes. Approximately half of our obligations were carried by the bank of which my partner was president. As treasurer of our corporation he placed our notes with various other banks and brokers. There never had been even the slightest hitch in our securing all the credit we required.

For years I had taken it for granted that I need not worry about money matters. It was my custom to sign and to indorse, and then give to my partner, from time to time as he asked for them, various notes of the company, payable to its own order, with the dates and amounts blank. He requested me to do this, so that he might have a supply of our paper on hand in his private box at the bank, to facilitate our financing. When I made the first of these notes in blank I was a tyro in banking. Later I executed them from habit, as a matter of course. I did not suspect my partner of misappropriating any of the paper. I thought he was rich and the soul of business honor. He managed our finances, and I ran the shop and the sales organization. I was entirely contented with the situation.

Real Troubles Begin

My partner had told me he intended to double the capitalization of the bank he headed. The capital had been five hundred thousand dollars. He wanted to be president of a million-dollar institution. He did not explain to me at the time how he purposed to increase the stock. I was only casually interested in his plans. He was moving in a different world. The principal impression his announcement made on me was an increased idea of his wealth. I believed then that he must be very rich. I knew he controlled a majority of the half-million-dollar stock of the bank. I assumed he purposed to put in a quarter of a million more, to insure for himself at least fifty-one per cent of the increased capital.

Three or four months after my partner first referred to his intention of doubling the stock of the bank he came to the factory late one afternoon. The moment I saw him I knew he was under a tremendous strain. His face was haggard. His eyes dodged my look. He walked into my private office, shut the door, and dropped heavily on a chair.

The man had nerve. In a tone that, at first, was even and firm he started to tell me of the disaster that had struck his ambitions like a lightning bolt.

"We had the stockholders' meeting at the bank to-day," he said. "The increased capitalization was voted. I had made arrangements with certain men, whom I trusted implicitly, to take a big block of the new stock. They agreed to vote it in combination with me. I never guessed they would double-cross me. They did. When the new directors were elected I found a plot had been made to oust me. Another man was chosen president of the bank. I was given a vice presidency as a sop. But I have lost control over there."

For the first time my heart warmed to my associate. I realized what a blow to his pride this was. My hand shot out to him impulsively.

"That was a dirty trick!" I cried. "But never mind, Pard, you can start another bank on your own hook."

He did not take my hand, but flinched as if I had struck at him. He looked ghastly. His eyes were narrow slits, almost hidden by wincing lids. Suddenly he stiffened. He faced me boldly now. Without a doubt it had been his intention until that moment to admit the knavery he was guilty of. But he changed his mind in a second, and took advantage of my expression of sympathy. Instead of confessing what he had done, he continued to deceive me, relying on my complete trust in him.

So I did not learn until long afterward, by his own admission, that he had covertly discounted our company's notes for enormous sums and had misappropriated the proceeds for his individual speculations.

"I must stay on at the bank temporarily," he said, "to protect our manufacturing

Westinghouse

ELECTRIC AND MANUFACTURING CO.

MEN

Money, machines and methods are three great factors in modern industrial progress, but each is dependent on a greater factor—men.

Machines and methods may increase output, decrease cost and eliminate liability to human error, but for their perfection and successful operation we must have human resourcefulness, ingenuity and experience.

Money—representing the solid financial backing of great enterprises—is available only because of public confidence in human integrity and business ability.

Therefore, man-building is the first duty and it is the greatest achievement of the far-reaching organization known to the world as Westinghouse.

It is your best guaranty that when you buy any electrical product stamped with the name of Westinghouse, you can rely upon it as representing the quality of materials, excellence of design and care in construction that mean efficiency and durability.

George Westinghouse surrounded himself with men capable of visioning the best possibilities of the coming electrical age.

And to this nucleus were attracted other men whose abilities have added greatly to the human resources of an already great institution.

Men who knew how to create organization, increase engineering and financial resources and provide manufacturing equipment.

Thus the Westinghouse Electric organization today includes many individuals who have gained wide recognition, and is constantly developing others from within its own ranks.

Its engineering and manufacturing resources range over the entire electrical field from the electrification of a great railway system to the construction of a small meter with the accuracy and precision of a watch. They also extend to the selecting and testing of materials, the designing of machines and tools, the mastery of economical production and the solving of the individual problems of customers.

Whether you are equipping a power plant or purchasing an electrical convenience for the home, you can rely upon the human factor represented by the name Westinghouse.

The Westinghouse Electric trade-mark assures you of the highest specialized training of men whose abilities are devoted to any specific group of products *plus* the engineering, manufacturing and financial resources of an organization covering the whole range of electrical generation, transmission, application and control.

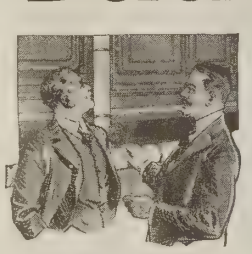
"Defend your steam"



"I HAVE brought you down here to show you how you must *defend your steam,*" says the Consulting Engineer to his new client, "*for to defend steam is as important as to produce it.*"

The Engineer Explains

The Engineer tells how the giant energy of steam is fought at every degree by lower temperatures that steal its power. How the iron pipes are no protection against this incessant attack — they leak heat as a sieve leaks water.

He explains that, for the steam to get from its birthplace to its destination, those pipes require the very best insulating armor. That insulation is as necessary to *defend* the steam as is the coal to make it, or the metal to pipe it.

"85% Magnesia" Saves Coal

"But there's a big difference," says the Engineer, "among pipe-coverings. Because all are white they may look alike, but in their power to *hold in the heat* the '85% Magnesia' Coverings do the best work and save the most coal.

"Put your hand on that '85% Magnesia.' See how cool it is? That coolness means that at least *seven-eighths of the steam is on its job.*"

Millions of Air Cells

When applied according to the best-established practice, "85% Magnesia" is the most efficient armor known to defend steam against loss. Every inch contains millions of tiny air cells, made by Nature herself. Each cell imprisons "dead air" through which the heat has no chance to escape.

To every 85 parts of Carbonate of Magnesia, is added asbestos as a binder to give structural strength. *No wear-out is possible.* After twenty-five years of service these "85% Magnesia" Coverings have been stripped off and re-applied, as efficient as when new.

"85% Magnesia" is Standard

The matchless efficiency of "85% Magnesia" is why it is the regulation covering in the United States Navy; why all modern locomotives use it; why most Power-plants, Terminals, Skyscrapers, and Hotels are equipped with it.

Where coal economy is imperative, "85% Magnesia" is imperative.

A complete Specification for the scientific application of "85% Magnesia" is sent free upon request to all architects and engineers by the Magnesia Association of America.

company. I can't fight those fellows now. On the other hand, they will do everything they can to placate me. They're afraid I'll expose how they double-crossed me. That would react to their detriment. I accepted the vice presidency this afternoon in order to preserve our present credit line while I make other arrangements. The bank holds our demand notes for thirty thousand dollars. If that paper should be called it would smash us! We must gain time until we can turn ourselves."

Thus he subtly unloaded on me part of the onus of responsibility for deciding what course we should pursue. He took a memorandum slip from his pocket and laid it on my desk. Even in his rascality, then and afterward, he always was the perfect bookkeeper. His masterly skill as an expert accountant fooled me easily for months, until I was trapped. It was to deceive some of the shrewdest financiers in America too. When my partner was tried and convicted, many years later, for obtaining money and credit under false pretenses, he was paid the tribute in court that he was the most ingenious crook the Bankers' Association ever had caught.

"Here's a list of our outstanding bills payable, with their maturities." He swiftly explained the memorandum to me. "You know that as president of the bank I was able to discount our paper in various places outside the city. Most of our former sources of credit are likely to be cut off, now that I no longer have a free hand to dispose of our notes to country correspondents of the bank. I must establish other credit lines as rapidly as possible, to yield us an amount of new money equal to what we owe at present.

"Previously our indebtedness was not a menace. My position at the head of the bank protected us. Now we are in a very different situation. We cannot count on the discount line at the bank; nor shall I be able to scatter notes all over the country, as heretofore. We are in jeopardy. But our fine reputation will save us if we act at once and keep cool."

Getting in Deeper

I was stunned when my high hopes of wealth came toppling down on my head. I groped dazedly toward comprehension.

"How can we go broke?" I cried. "We've been making money every year."

"Could we pay the thirty thousand dollars we owe on our demand notes if they were to be called to-day?" he snarled. "Should a single piece of our paper be protested, the company would have to make an assignment. But we're wasting time talking about what won't happen. We must save our business. Our rating with the commercial agencies will enable me to raise all we need. This is my plan:"

I leaned forward in tense eagerness to understand his purpose.

"To start with," he elucidated, "it is vitally important not to let anybody suspect we're in straits. It won't do to say we are borrowing at new places in order to clean up with our present bank. The officials over there might hear about it, and would guess that I intended to quit as vice president and fight them. They'd call our loans to break me. I'm indorser on all our paper, you realize. If I should be forced into bankruptcy it would ruin me."

I roused with a start.

"Have you lost all your money in this double-cross deal?" I exclaimed.

He flinched again. His eyes wavered. But he made a specious explanation of his predicament.

"Of course not. I am just tied up in some heavy investments I should not have made if I had thought for a second that I'd be ousted from the presidency of the bank. It will take me several months to extricate myself. I'm short of cash at present. And I have hypothecated most of my bank stock as collateral for some big loans."

I slumped in my chair as if a prop had broken behind me.

"You see, we're in a ticklish situation," he continued. "But I mean to put a bold face on the matter and work out. First, I shall apply to our notebroker to float fifty thousand dollars of our paper. I'll exhibit some of the contracts we have from customers and tell him we need more cash to handle increased business. Our statement of assets and liabilities, our business rating and our fine record will secure the money.

"Then I shall go to New York and open a checking account there, ostensibly to facilitate the handling of our Eastern business. I'll deposit half of the proceeds of the notes I sell our broker. I will say when I open the New York account that a little later we shall need more money to finance some large contracts. I'll request that the bank look us up through the commercial agencies and advise us whether or not we can have fifty thousand dollars in about six weeks. No doubt we shall be welcomed. Our standing is very good, and we have been in business long enough to be regarded as firmly established.

"The hundred thousand dollars I expect to get from those two sources will enable us to pay all our present notes as they mature. As soon as the New York credit line is assured I intend to apply to another bank here in the city to discount our paper for fifty thousand dollars additional, and will transfer our local account there from our present bank. Then we'll be safe."

"But that makes one hundred and fifty thousand dollars you intend to borrow!" I reminded. "A hundred thousand will be enough."

"No," he declared. "We'll need considerable elasticity and large cash balances for a while, until we are well known to our new banks. It will pay us to carry fifty thousand dollars or more on deposit in order that we may appear as strong as possible."

I comprehended his plan and knew it was feasible. I realized he meant to work under cover and that he had suggested an intention to bluff a good deal. But it did not occur to me there was anything shady about the methods he purposed to use. His scheme looked like the clever strategy of a fellow who was cornered. I could understand how even a very rich man might become involved and temporarily be short of cash. I had no reason then to suspect that my partner was not wealthy. The program he outlined confirmed my previous impression that he was a wizard of finance. I felt utterly unable to cope with the crisis myself. Unhesitatingly I agreed to his proposals.

Of course I coöperated thereafter as best I could. I certified to the correctness of the assets-and-liabilities statements he prepared. I executed dozens of new blank notes. His plan was carried through without a hitch. He reported the various successful steps and from time to time brought to the office old notes he had taken up. Our bank balances grew bigger than they had ever been before. I breathed easily again. I did not meddle at all in the financing. But one feature of the situation puzzled me. I asked my partner about it. He had reported that all the scattered notes were paid, but for some reason he had not cleaned up at our old bank, though we were borrowers at the new depository for a large discount line. I asked him why he did not close the first account.

"I do not want to break there until I have perfected certain personal plans," he replied vaguely to my question. "So long as they are willing to renew our paper, I think it best to divide our deposits between the two local accounts."

Jolted Awake

Then he hinted at the possibility of his regaining control of the bank at the next stockholders' election. I surmised he was unwilling to confide all his designs to me. I made no more inquiries. I fully expected he would turn the tables on the men who had tricked him and that before long our company would be protected again by his powerful standing as a bank president. I was free now from the worries of finance. My partner managed all our money matters. I only hoped we should soon be relieved of the large burden of interest we were carrying for money borrowed that we did not need.

I was jolted awake from my delusion. When, with my full knowledge and assent, we had piled up debts only a little less than a quarter of a million dollars, my partner brazenly informed me that he had juggled our funds for years, and had used in his own speculations about a hundred thousand dollars of additional money, which he obtained by the secret sale of company notes through various agencies of distribution he had. He had scattered the paper adroitly. Doubtless, if he had been successful in his private ventures I never should have learned of his misuse of our company credit.

He told me because he was in difficulties. He had left the bank and was devoting all his time now to personal enterprises. In finance he was a genius, but he had talent

Whitman's

Do you know the idea behind this Sampler Package?

We originated this package as a "get acquainted" assortment, and put in it candies from ten different standard packages of Whitman's, the "Fussy" Assorted Chocolates, "1842" Bitter Sweets, Chocolate Covered Liquid Cherries, Honey White Nougat, Jordan Almonds, and other famous Whitman's specialties. We thought people would buy a Sampler, and thereafter buy the separate packages that they liked best. They did this, but they also adopted the Sampler as the winning assortment in the whole candy field, with a popularity that is astonishing.

The Sampler is the leader among Whitman's—the National Sweets. Buy it from the nearest Whitman agency (usually the leading drug store). If no agency is convenient, send us $1.00 for a 17 ounce box, prepaid.

Stephen F. Whitman & Son, Inc., Philadelphia, U. S. A.

Makers of Whitman's Instantaneous Chocolate, Cocoa and Marshmallow Whip.

Savage for Sureness!

SAVAGE ability to build a product of high merit has not been a thing of mushroom growth. The careful and painstaking designing of its several products to meet each new conclusion of its experimental laboratories is never hurried or hastily decided. The entire organization must be a unit in favor of each detail. That's why the

Makers of the famous Lewis Automatic Machine Gun and of military, high power and small caliber sporting rifles.

(Continued from Page 68)

for any business except banking. He seemed to blight everything else he touched. As he finally confessed, he never had been rich. For twenty years he had operated on "a shoestring." He had pyramided legitimate borrowings when he began his financial career. He would secure a loan for a thousand dollars at five or six per cent; then he would use the money to buy some security yielding the same interest. He made no profit on such "washes," but built up a reputation for capital that he did not have. Less than twenty-five thousand dollars was the most he ever owned. But he made it look like ten times that much money by keeping it active.

His speculative ventures had promised rich returns at the start, but he had sunk all the cash he raised surreptitiously on our company notes. The endless chain of his maturities and fresh issues of paper threatened to break. He dared not try to float any more of the notes without my knowledge, lest I discover and repudiate some illicit transaction. He was tantalized by the surplus money available to our corporation. Exposure threatened him in a few days. He pretended to make a clean breast to me of what he had done. When I had been told, he ignored his dishonest acts and at once began to show me how ruin might be averted.

"It's a bad mess," he said; "but we mustn't lose our heads. This business can be saved. The important thing is to keep the big debt secret until I can sell out my personal investments. We must avoid suspicion and play our cards carefully."

The Crooked Way Out

He implied that the problem was joint. He had glossed over his deceit and lies. The heinousness of what he confessed did not strike me then with full force; though, of course, my previous faith in his integrity had been shattered. Perhaps I was so dumfounded that vindictiveness did not begin to burn in me at once. Somehow I wasn't instantly furious. I sat silent a minute or two and listened to his scheme, while chills crept up my back.

Suddenly I realized he was proposing not merely that I remain passive, and give him a chance to work out of his predicament, but that I coöperate actively in his desperate plans. All my frozen wrath burst out in a second.

"You go to hell!" I exploded.

I amplified my rage. I made a verbal picture of my partner that stripped him to the bone of all his suavity and smugness. He squirmed. He had avoided using plain words in his confession. Neither then nor afterward, when he and I in concert committed almost every imaginable financial crime, did my partner bluntly recognize the truth in speaking of his knavery. He had expected, undoubtedly, that I should be infuriated. He was ready for my declaration now that I would have him arrested. Instantly he countered with a threat:

"If I go to jail you'll be locked up too! Every one of those notes I discounted has your signature on it. You certified, as president, to the correctness of our company statements of assets and liabilities, the foundation of our credit. Those statements did not show all our present actual obligations by two hundred thousand dollars. Do you think anybody will believe you were ignorant of the facts? You'll be charged with obtaining money under false pretenses. That's a penitentiary offense. You'd better not shout to the world what I've told you. You'd be a fool to let this fine business be destroyed. We can save it by coöperating in my plans."

I am not of powerful physique. I never have been especially pugnacious. Yet, before that moment, I should have resented with my fists an insinuation that I was "yellow." But there must have been a saffron streak in me then. I did not leap at my partner and start a rough-and-tumble fight. I sat in my chair and shivered under the cold malice of his steel eyes. I was scared stiff. I make no defense of my moral cowardice. There is no extenuation for me. I was yellow. Later, retribution brought my pusillanimity its deserts. I wore a shameful uniform for three years and a half. But no other punishment has hurt so much as my own self-contempt.

That afternoon, however, I made excuses for myself. I said in my thoughts it was unjust I should lose by no fault of my own the business I had developed through years of devoted work. I loved every machine in the factory. The life of the company was my own blood and spirit. My partner had a plan that seemed feasible. He assured me that in a few months he would be able to dispose of his personal investments and square his defalcation. Surely it would be foolish to let the business be wrecked when there was a good chance to save it! I realized it was unlikely that a jury would credit my denial against my partner's flat accusation of complicity in his frauds. Even if I should be acquitted in court, the business world's verdict would damn my reputation forever. I decided I might as well die for a sheep as for a lamb. I consented to become a party in the criminal schemes proposed to me. I was afraid to refuse.

If I had not been a fatuous fool I should have foreseen that ultimate disaster was only postponed. It was inevitable. But that afternoon I hoped I could extricate myself from the tangle in which I had been enmeshed. My one thought was of getting free as soon as possible. I wasted no time on recriminations. I sullenly demanded of my partner all the details of his scheme. He smiled his relief and took out his lying pencil. With perfect sang-froid he demonstrated the infallibility of his plan. Before we two crooks separated that night we had agreed on an elaborate plot of deception. The very next day we started to put it into effect.

The basis of the fraud we jointly instituted then was an ingeniously false statement of our assets and liabilities, to the truth of which my partner and I both certified. The mercantile agencies accepted our figures without suspicion. We had a fine history of veracity to substantiate our lies. Our ratings were promptly raised. Thus we laid the foundation for the credit we built. We were well known to have been operating prosperously for many years. No one guessed that we had exaggerated our profit showing.

Brokers were eager to buy our notes. Country banks took them gladly. We opened three new checking accounts in the city and borrowed the money to keep attractive balances. We "kited" checks between our local banks and our New York depository. Sometimes we had as much as forty thousand dollars "in the air." The legitimate debts of our company, with the burden fraudulently foisted on the concern by my partner's outside speculations, amounted to approximately a quarter of a million dollars. But we had to borrow a hundred thousand more to keep up appearances.

A Chain of Bogus Deals

After I started to play the crooked game I balked at nothing. It was a tremendously difficult thing to raise the large amounts of money we needed without seeming unduly eager. Lie bred lie as we made explanations of our purposes in applying for loans. My partner and I acted boldly always. We obtained money from a dozen independent sources, none of which suspected we were getting big credits elsewhere by similar misrepresentations of our needs. We would negotiate successfully discounts of from ten thousand to twenty-five thousand dollars for the purchase of raw material to fill a contract with some customer. Then straightway we would exhibit the same contract to another bank or broker, and secure as much more there, for the same ostensible purpose. I learned that a bank is apt to be favorably disposed toward loan applications made by depositors who carry substantial balances. We kept on hand always an elastic fund that enabled us to pay every note as it matured. Our credit actually seemed to be improved by every bogus transaction we carried through.

I knew the amount of attention and work our intricate operations demanded of my partner. I was spending larger and larger portions of succeeding days in systematic lying myself. I had to neglect the factory and the sales department often while I went about preying on financiers. It was not strange to me that my associate had little time to look for purchasers of his private investments. I continually prodded him to hurry the disposition of his properties at sacrifice prices. I knew that we could get permanent relief only when his locked-up capital should be freed.

But none of the enterprises in which he had sunk cash was an earner. On the contrary, all were losing. There was no possibility of selling out such concerns. My partner had been throwing good money after

(Concluded on Page 73)

How Hudson Solved the Gasoline Problem

Now Furnished on the New Light Super-Six

The gasoline saver is one more new invention of the Hudson Super-Six.

It was shown for the first time at the New York Automobile Show in January. Now most all Hudson dealers are showing the new cars equipped with this and ten other important new features. The gasoline saver is the only new feature shown on automobiles at this year's shows.

Overcomes the Poor Gasoline

Hard starting and wasteful gasoline consumption due to cold weather and the low grade gasoline are overcome. Radiator and hood covers are not needed on the new Hudson Super-Sixes even in the coldest weather.

This device has been in use on hundreds of Hudson Super-Sixes during the coldest winter weather. Its effectiveness has been proved. It is as easily operated as the damper on a stove.

Low grade gasoline gives low mileage and is wasteful and harmful to the engine, unless the motor is operated steadily at a high temperature.

Primer Insures Easy Starting

In zero weather, even at 20 below, the new Hudson Super-Six motor starts. The primer is another new feature of the new Super-Six.

On the new cars there are also other worth-while features you should see. There is the new plaited upholstering, more attractive door fasteners, hard rubber handles, an improved body finish and other details you can see. And then we have made many improvements in the building of the car. The car that last year won every worth-while record is a much better automobile now because we have learned to build them better.

We made those records of endurance for acceleration and speed with cars of the earlier production. No one has yet equaled anything we have done with stock Super-Six cars. And yet the cars we turn out today are infinitely better because of the increased skill and experience Hudson workmen have acquired in building the 25,000 cars that were produced last year.

Think What a Year Has Shown

Remember what was claimed for the Super-Six one year ago. Then we had only our own records to show—records proving the Hudson Super-Six the fastest stock car built.

We then had established only the 100-mile and the one-hour records for a fully equipped stock touring car. But since we have won the 24-hour record for a stock chassis, the Transcontinental Run both ways, the fastest stock chassis mile, and have outsold any other high grade car in the world. So if you want a fine car that out-performs any other car that is built your choice must be a Hudson Super-Six.

Buyers Waited for Months

At this time last season orders exceeded our production by 8,000. At no time during the season were there enough Hudsons to go around. From this you can see what the demand will be this year. We are only producing 30,000 cars as against last year's 25,000 because we cannot build more and build them well. That is not a large increase. It shows, however, that if you want a Hudson you cannot afford to postpone buying. Unless you act now you may be like other thousands who will be disappointed this year because they could not get prompt deliveries.

Don't fail to see the gasoline saver.

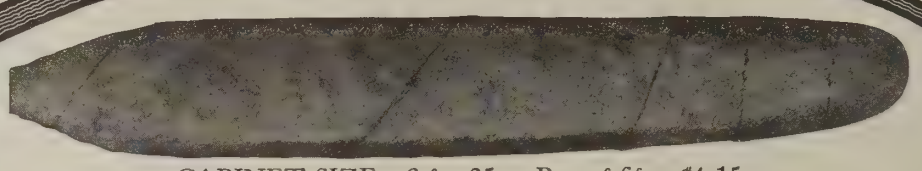
HUDSON MOTOR CAR COMPANY, DETROIT, MICHIGAN

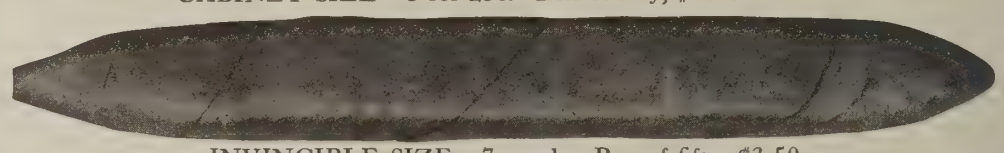
RICORO

the "Self-Made" cigar

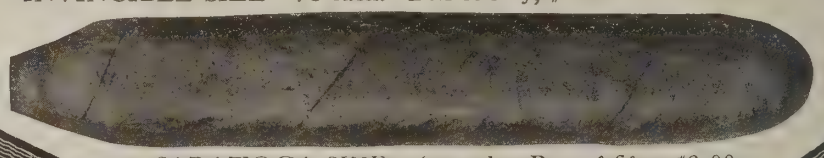
Im-ported from Porto Rico



CABINET SIZE—3 for 25c. Box of fifty, $4.15



INVINCIBLE SIZE—7c each. Box of fifty, $3.50



SARATOGA SIZE—6c each. Box of fifty, $3.00

"Be Sure You're Right—Then Go Ahead"

We knew we were right when we decided to advertise RICORO—the "self-made" cigar—some months ago. We knew we were right because RICORO already had made good *without* advertising—selling a million a week on merit alone. That is why we call it the "self-made" cigar.

But even then we did not know how "right" we were about RICORO. We *expected* great returns from spreading the news about RICORO—but the results have *amazed* us. RICORO sales have jumped to three millions a week—350 cigars a minute. Every fourth man who buys cigars in a United Cigar Store now asks for RICORO.

Do these figures mean anything to you, Mr. Smoker? They ought to. They ought to make you *hurry* to try this great cigar which—because it pays no duty—sells at *half* the prices of other fine *imported* cigars.

MAKE THIS TEST

Buy a box of RICOROS today at any United Cigar Store—or by mail. Smoke ten of them and if you do not agree that this is the greatest cigar value you have ever had at the price, return what is left of the box and get your money back in full. Could anything be fairer?

RICORO is made in Porto Rico and imported from there, but it pays no duty. Therefore, we can sell it at 6, 7 and 10 cents each and up to 2-for-25c, depending upon the size and shape. Select your favorite size and make your own test *at our risk*. DO IT NOW.

THANK YOU.

UNITED CIGAR STORES COMPANY

1000 STORES OPERATED IN 300 CITIES—EXECUTIVE OFFICES NEW YORK CITY

MAIL ORDERS: We prefer that every customer visit one of our stores in person and in this way not only secure the exact shade suited to his taste, but also become familiar with our store service.

If no store is convenient to you, we will ship one or more boxes by mail or express, all charges prepaid, on receipt of price.

Use order blank on coupon at lower right-hand corner of this advertisement.

(Concluded from Page 70)

bad. When I realized the situation I knew our little company had saddled on it an enormous debt, with no hope of relief. I had committed crimes enough then to make it certain I should be sent to prison if detected.

Now began a frenzied and desperate long struggle to ward off punishment. The skill in crookedness that my fellow criminal and I developed is well-nigh incredible. For years we found ways to meet all the emergencies that arose. We kept his enterprises going, though they were constant drains, in order to utilize them as manufacturers of "accommodation" notes, which we discounted at our various banks and through brokers as genuine bills receivable for merchandise sold. This kind of fictitious commercial paper netted us in excess of ninety thousand dollars at one time, scattered among a dozen sources of credit. We kited checks almost daily to maintain deposit balances at our banks. We assigned our open accounts at discounts for spot cash. We borrowed wherever and whenever we could on our false statements of assets and liabilities. Brokers floated our notes in half the states of the Union.

Caught at Last

Our enormous interest charges, the cost of discounts, the losses we constantly had to meet in carrying my partner's dead horses, mounted until the drain was more than the earnings of our prosperous little manufacturing concern. In desperation we resorted to the forgery of bills of lading and secured heavy advances of cash on fictitious accounts receivable. We would take up these fraudulent obligations at maturity by sending New York or Boston drafts for the amounts. When the credit companies checked up the accounts we had sold them, my partner, the expert bookkeeper, had our falsified records inspection-proof.

Twice an informal audit was made by sending certification blanks to the real concerns we carried on our books for doctored sales. We steamed open the letters that were mailed back to us with certifications of the trifling amounts our customers actually owed. We inserted forged certifications of the fraudulent items. Then the envelopes were resealed and forwarded to our big creditors. There were a thousand and one crises and hairbreadth escapes. We wriggled out of danger every time.

Day after day, week upon week, month in and month out, for year succeeding year, my accomplice and I dodged just out of reach of the clutches of retribution.

Our total debt swelled to three-quarters of a million dollars. At last my partner and I saw we were nearing the end of our rope. Ruin could not be postponed more than a few months. Already there were indications of the disaster. Our banks began to caution us not to let our manufacturing company grow so fast, even if profits were attractive. Then, when the outlook seemed darkest, my partner and I severally had inspirations.

He proposed that we go to our largest creditor and confess the exact situation. He declared that this large creditor was unlikely to have us arrested, because he would lose so much if we were to be smashed. The factory was earning honest profits of more than six thousand dollars a month, not counting the added burden of interest and discounts on our fraudulent excessive borrowings. This one creditor was a capitalist who had loaned us about two hundred thousand dollars. My partner believed that the man would hush up our frauds and buy off other creditors to whom we were paying more than banking interest. The company was worth, in tangible assets, half of its debts if it could be continued as a going concern. Its goodwill was as valuable. It would pay ten per cent on a capitalization equal to all its obligations.

The one idea my partner had now was to escape arrest. I did not believe the big creditor would swallow the truth if we two liars should tell him the real earnings of the business after confessing our deceptions. I felt there was little chance of avoiding retribution in that way. So I proposed the course that my own inspiration suggested as an alternative:

"If the business will pay our creditor ten per cent in case he should liquidate our debts so that the excessive interest charges and losses would be cut off, it will pay that much to anybody else. We are reputed to be very prosperous. Let's sell out for half a million dollars, if possible. That would cancel all our fraudulent debts and leave only the legitimate obligations of the concern. You and I own all the capital stock now. We can use the proceeds of selling it and clean up the company. We could turn the business over to new stockholders on a basis that would make them big dividends. True, we individually should have nothing left; but we'd keep out of jail."

"It's impossible to find a buyer without offering our operations for close investigation that would expose us," he objected.

"An investigation can be avoided," I argued. I knew a great deal about finance now. "I'll pretend I'm buying you out. I'll sell the stock to the public. Plenty of people in our trade will be glad to have it as an investment."

He saw the scheme was feasible, though the odds against success were heavy. We started work at once on our final strategy. A prospectus was prepared in which truth and lies were cunningly mixed. The sale of stock began auspiciously. Checks came in a steady stream. It seemed as if the impossible would happen—that we should escape punishment. But when our prospects appeared brightest the long-cheated law grabbed us. One of our forgeries was discovered—quite by accident. A bank confronted us with the proof of our fraud. After years of dodging we were caught at last. Our elaborate edifice of credit tumbled in a moment, like a house built of cards.

The shame shriveled me. I slunk out of the bank to hide my face while I awaited arrest. When the sheriff brought the warrant to my house I was thankful for the night that cloaked me on my way to jail. I was glad to be locked out of the world's sight. I did not think, then, I ever could look my fellowmen in the face. I made no fight against the inevitable. I felt tired—utterly tired. I told the judge I was exactly fifty per cent guilty of all the crimes that had been committed. I asked him to sentence me at once. I was sent to prison for a term of from four to fourteen years. My partner demanded a trial. He employed the best criminal lawyers. He delayed his conviction two years. Then a jury found him guilty.

To the Last Penny

I wore the felon's uniform of disgrace three years and a half. I have paid the debt the law claimed from me. Now I am paying the obligations of money I owe. Hundreds of people, even some of my creditors themselves, tell me I am a quixotic fool to attempt to square up. They say I paid at the penitentiary in suffering for my crimes. Those good people are wrong. I have not paid. I did not suffer in prison. There I gained again my self-respect and the respect of other men. Prison was not punishment to me, but opportunity. I still owe the debt of restitution.

I am not quixotic. I shall earn the money to discharge my debts. I have a plan. There were a million chances to one against my success in making myself a writer. I have an easier task now. I am only forty-three, and I am earning a thousand dollars a month. I shall be rich, in money as well as in friends, very soon. Fate did not destroy me utterly and then help me build from the wreckage a new man destined to accomplish only a little success. I have done big bad things. I am granted a tremendously larger chance to make good. I have a big theme of life now. Nothing is impossible to a square man with brains! I shall prove that true.

I am writing a vital book. It is to be a record of accomplishment—not a visionary dream. The royalties from that will help. I divide into halves every check I receive for a story or an article I sell to a magazine; one equal share is paid immediately to my creditors. I deliver addresses from the platform in many cities. Fifty per cent of the receipts from my speaking are applied on my debts. I have abundant proof that all the world is with me! I have millions of partners now. They are just the opposites of the two old ones I had. The new firm is a winner. It will earn the quarter of a million dollars necessary to wipe out my past losses.

This has not been a pleasant story to write. It has been unpleasant to read. All of us are glad the chapter is done. The happy ending is in sight. I am home again. My little family is continually happier. I have an ever-broadening circle of old and new friends. And round the corner there are no clutching fingers, waiting to grip my shoulder. Ahead are opportunities. I am not wasting my strength in futile, hopeless struggles. The battle I fight now is worth while.

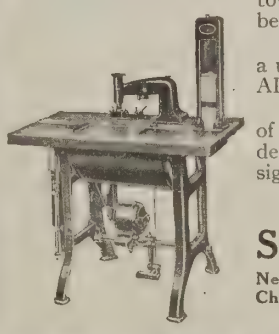
"2½ Days' Addressing Done In 2½ Hours"

Time Saved Here

"We are pleased to advise that we have found the DIREX-ALL all you claim it to be: If we were to address our envelopes for circulars, of which we send out about 2500 to 3000 the end of each month, it would probably take a stenographer two to two and a half days to get them out, whereas with your machine the entire number can be addressed in about two and a half to three hours."

(Signed) F. C. BOWEN,
Barber & Co., Inc.,
Steamship Agents,
17 Battery Place, New York



Doesn't matter whether you're "going it alone" in a one-man office, or are handling big mailings in a large establishment, there's the very size and style of DIREX-ALL machine for your business.

More than a mailing machine—*more* than a listing machine—*more* than a billing machine. Combines the functions of all three, and can be used for miscellaneous other work now done by hand.

Speed, accuracy, convenience, simplicity, versatility. Mailings out on time. Returns back on time.

Read Barber & Company's letter to the left. Hundreds more like it. Some from concerns in your own line of business.

The DIREX-ALL is the addressing machine that prints through a ribbon—the machine that uses one-piece metal plates. Your mailings have the touch of individuality. No parts of the plate to become lost or inter-mixed.

The plates that do the printing also serve as a useful index. A boy can do it all. The DIREX-ALL makes no mistakes.

"Doing the Day's Work *Better*." That's the title of a book you may have for the asking. Pictures and describes the DIREX-ALL for you—the one designed to save your time and money—*guaranteed.*

The heart of an Economy renewable Fuse is the "Drop Out" Renewal Link. It is the only part you have to replace in order to restore a blown Economy Fuse to its original efficiency.

ECONOMY renewable FUSES

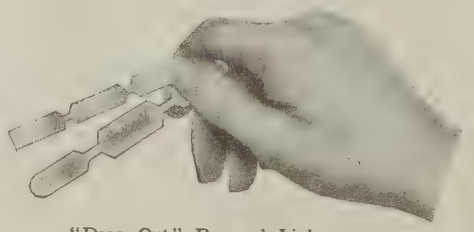
are used over and over again, not discarded as are "one time" fuses that are useless after operation. Saving the costly parts and renewing the inexpensive fusible element of Economy Fuses means **a reduction in annual fuse expense of 80 per cent.**

Safety at a Saving of 80%

Protect your electric light, heat and power circuits with Economy renewable Fuses. Whether you use one or thousands of fuses per year, it will pay you to abandon old-fashioned, wasteful and oftentimes undependable methods of fusing circuits, in favor of Economy Fuses—accurately rated, safe under all conditions of service and effecting a cut of 80% of yearly fuse maintenance expense when used instead of "one time" fuses.

In Your Home

Be sure to use Economy Fuses in your home, not only because they save money, but because they are the best protection obtainable against the fire and accident hazards of overloads, short circuits and effect of lightning discharges on electrical circuits.



"Drop Out" Renewal Links are accurately rated, inexpensive, and their use renews an Economy Fuse over and over again. A quantity always on hand represents only a small investment.

Take advantage of this offer:

Send ten cents in stamps for one 3 to 30 ampere, 250 volt, ferrule type, Economy renewable Fuse, with two "Drop Out" Links. (Retail price, one fuse only, 35 cents; in Canada 40 cents.)

Send for the sample today. Ask for Bulletin S.

ECONOMY FUSE & MFG. CO.

Also made in Canada at Montreal

Economy Renewable Fuses have been carefully investigated by the U. S. Government Bureau of Standards.

THE FORTUNE MAKER

(Continued from Page 5)

leave believe the whole gang up there was in cahoots on the bribery business; but Walter Hayes undertook to put it across, and when it came to a show-down old friend John just let him hold the bag. That's what I'd just as soon believe as not. Anyway, there's John Turner's testimony. Repeated on the witness stand, it meant stripes for Hayes, and Hayes knew it.

"You can guess whether he'd be sore about that or not. How deep the woman mess went, and what cause for soreness there was in that, I don't pretend to know. Probably you can find out if you want to. I've got an unverified story about Mrs. Hayes going to Turner's house one evening a few days before the murder. You can look into that if you're interested. Now to go back to this bribery business a minute.

"Walter Hayes and a man named McGregor, who was general manager at the motor works, had just bought a controlling interest in the Arcum Company here and were putting a lot of fresh money into it. Well, I've got the goods on the Arcum Company. You see, these pious, new-rich plutocrats had been running the city and county here to suit themselves, on the beautiful theory that they were making the place rich; and the twenty or thirty thousand poor devils whose labor created all the wealth, including the huge graft of the plutocrats, shouldn't have anything to say about it.

"They practically assessed themselves, and when they wanted any public property they just politely took it.

"I promised to make this Arcum Company cough up a great wad of back taxes and tear down part of its plant that's built over a public alley. Now Hayes, you see, was just getting out of the motor company and into the Arcum Company. If he could use the motor company's money to defeat me that would be a fine stroke of business for his Arcum Company. That explains why he was so hot for the bribery and undertook to put it across himself.

"Well, he was caught. Just one thing could save him. If John Turner testified, it was the pen for him. He took his little gun in hand and made sure Friend John didn't testify. There's that business of the duplicate key to Turner's office. Somebody on the inside must have got that. Well, Walter Hayes was right on the inside. The man who fired that shot was very familiar with the place. He had some means of knowing just when Turner would be alone. Inside workings again. More than that, right at John Turner's finger was a push button that rang a bell out in the anteroom. If a stranger had stepped in there from the hall wouldn't John Turner have pushed that button? You bet he would! It was no stranger that stepped in.

"And get this: I can put you in touch any time with four perfectly responsible witnesses who will swear they saw Walter Hayes at the mouth of the alley beside the general office building within a minute or two of the murder. He went down that alley, climbed into his car, which he'd left some distance from the plant, and drove off. Remember, he'd resigned from the motor company then. He had no business there—no business he was talking about, I mean.

"Now there's the truth about John Turner's murder. Check it up. You'll find there ain't a crack in it anywhere."

Well, I asked him some questions, and went away with some thoughts and emotions surging round in my head that I didn't expect to have when I entered his office. It was clear enough that Dent had a violent prejudice against everybody in what he called the plutocratic gang; clear enough, too, that he was given to reckless statements. For all that, it was a decidedly interesting sort of story.

Of course, if Dent's theory of the murder was right, it was not a case for the Government at all and I had nothing to do but go back to Washington. I was interested in the case, however. Breyfogle and I had worked together more or less on it; that being, in fact, the beginning of our long association. I had a great opinion of him. Certainly I paid no attention to Dent's absurd charges against him.

So I told Breyfogle what Dent had told me. Later on, when he was more famous, they said Breyfogle could make an iron dog talk if that dog had seen anything worth knowing. In time Breyfogle got Walter Hayes' statement, from which, supplemented a little here and there from other sources, the following true account is made up.

II

THINKING all these things over last night, I hunted round the house until I got hold of a Bible and found this half-remembered passage in Ecclesiastes: "The race is not to the swift, nor the battle to the strong, neither yet bread to the wise, nor yet riches to men of understanding, nor yet favor to men of skill; but time and chance happeneth to them all." That was our case, as you will see.

This strange adventure, with its monstrous issue, began in the little tailor shop at the rear of the People's Clothing Emporium, in Marthasville, Illinois, the middle of November, 1895.

Marthasville had a population of about two thousand and not enough business to go round comfortably. The population had been substantially the same ever since Civil War times. It was the sort of town that would naturally hold a low opinion of foreigners. But it made an exception in favor of Simon Weil, proprietor of the People's Emporium—a pursey, round-shouldered, dim-eyed, worried-looking little man. The town's best opinion allowed that Simon was a very respectable man.

Twice before Simon's cousin, Sol Rosenbaum, had appeared in Marthasville for a sojourn of several months. These appearances were coincident with periods of such extreme adversity that the cot in the little tailor shop at the rear of the Emporium and such fare as Simon's wife chose to provide were Sol's only means of keeping body and soul together. He was then about thirty, five feet six or seven inches high, and weighed not much over a hundred pounds. His face was mostly nose, with a stubbly little black mustache. The top of his head was just big enough to hold a hat. Among many other bootless enterprises, he had been in the show business; and in this back room of the Emporium he was secretly rehearsing a vaudeville company.

The members of the company were John Turner, Walter Hayes and Wade Carter. The two former were respectively twenty and nineteen years old; the latter was twenty-one. John Turner and Walter Hayes had grown up together. Between them a romantic boys' friendship subsisted, with the romance rather more on Walter's side perhaps than on John's. John was the leader—active, adventurous, daring, with a great stock of confidence in himself. Walter was really timid by nature—always conscious of it and always trying to hide it; so that whatever John suggested Walter promptly seconded with a bold front, though his heart might be quaking in his boots at the time. The boys had gone together to Macfarlane College, a little fresh-water institution that tried, on wholly insufficient means, to provide higher education with a strong church flavor. Together—under John's active leadership—they had been expelled in disgrace.

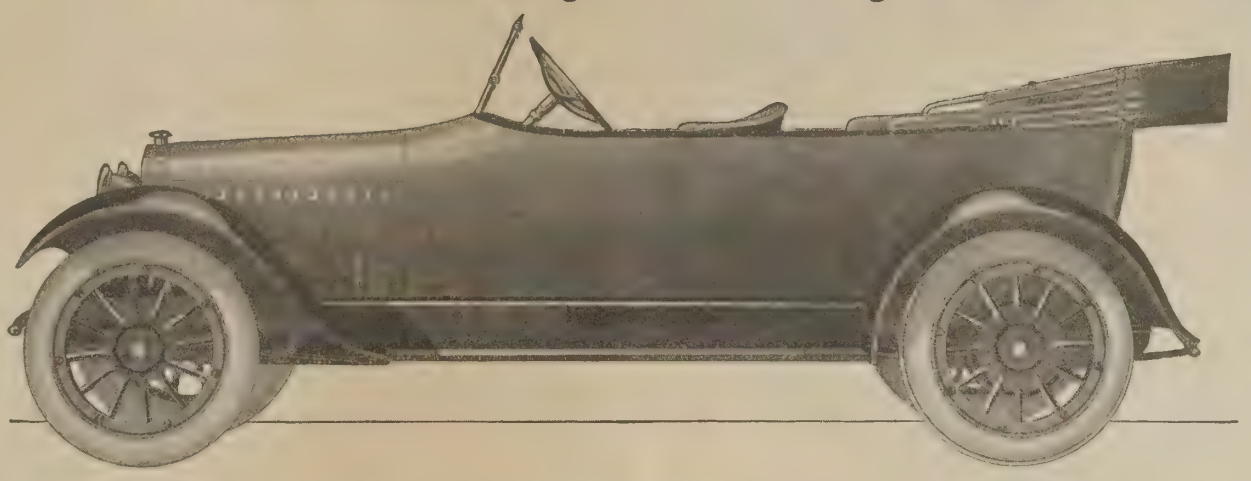
John's father was proprietor of the carriage works, Marthasville's only manufacturing industry, and not much of an industry at that. Stories were still current about the elder Turner's unregenerate youth—drinking, gambling, and so on. Now he was a chief pillar of the church and excessively rigorous in his judgments. He had grown stout, and had a fat, pasty white face, with dark, sharp little eyes twinkling out of the infolding flesh. His only worldly indulgence, except business, was shooting. He held the local record for quail and prairie chicken, and possessed a wonderful, much-ornamented shotgun that he had won at a state tournament. The cost and virtues of this gun were a sort of legend among the boys of Marthasville; but it was kept like a crown jewel, to be exhibited on rare occasions and never used.

It was only three years before that he had given over horsewhipping his rebellious son—judging it hardly safe any more. The two hated each other pretty cordially and frankly. After the expulsion from college John was put to work in the carriage factory on a kind of bread-and-iron regimen. He was now nearly six feet tall, well made, handsome, with brown eyes that were dark almost to blackness, and hair to match.

Walter Hayes was shorter and slighter, but agile. He had an almost girlishly fair

(Continued on Page 76)

Unnecessary to Pay More



Chalmers 5-Passenger 6-30—$1250

"How unnecessary to pay more than $1250 for a high grade 5-passenger touring car!" Those may not be your words, but that surely will be your thought when you examine this 5-passenger 6-30 Chalmers. This is not the first high grade Chalmers car at a surprising price. Chalmers has been building exceptionally good cars at exceptionally low prices for a good many years.

Uncommon—Distinctive—Attractive

No need to caution you not to miss the Chalmers lines and Chalmers curves. They are too uncommon. Too distinctive. Too attractive. In the front, a high, narrow radiator. A hood with a long straight slope. Chalmers unique molded oval fenders. Large, brilliant double-bulb lamps. A body that is handsome and comfortable.

Note the rear seat cushion. It is three inches wider than it needs to be. And the front seat has four inches more room than you require.

The wheelbase is long. That gives length to the body. There is four inches more room in the front compartment than you need, and eight inches surplus leg room in the rear compartment. The seats are unusually wide.

Abundance of Power

The motor, after all, is what interests both men and women. And that is where and why this Chalmers excels. It is the most famous and most used of all Chalmers motors. It has high power capacity. It is never under strain. At 45 and 50 miles an hour it is using only a part of its power.

Speed—Endurance—Economy

Scores of gold, silver and bronze trophies adorn the reception room of the Chalmers factory. They were won for speed, for hill climbing, for endurance and economy.

Just recently, in 1916, Chalmers led its class in the Pike's Peak hill climb, carried off the Giant's Despair climbing classic, set a new record from Chicago to New York, and won many other events.

But these feats are largely taken for granted with a motor so widely used as Chalmers, and with such great power-reserve and power-capacity.

Pay the Sensible Price

You need what Chalmers gives. Beauty plus reliability plus performance. You get those things in the Chalmers at a sensible price. Why go higher? Moreover to go lower may prove poor economy. So pay the sensible price for a sound and sensible car.

Prices

Five-passenger Touring	$1250	Seven-passenger Sedan	$1850

CHALMERS MOTOR COMPANY, DETROIT, MICHIGAN

We've Anticipated Your Towel Needs

When you reach for a ScotTissue Towel you instinctively feel that it's the *right* towel for you to use. After you have used a ScotTissue Towel, you fully realize what a completely satisfactory towel it is. Besides its pure-white cleanness and sanitary features, it gives superior service.

After years of exhaustive study and practical experimenting we have produced this perfect towel—the towel that is not merely a substitute for ordinary public fabric towels, but an actual improvement on them. The ScotTissue Towel is a specially manufactured paper texture—a real towel for every towel purpose.

The soft, absorbent ScotTissue texture has thousands of tiny cells to suck up every drop of moisture, leaving your skin dry and comfortable. And the new ScotTissue Cabinet gives you this perfect towel in perfect condition—absolutely clean—and folded ready for use. Every ScotTissue Towel bears the special ScotTissue trade-mark. It's your guarantee of satisfaction.

For all public and semi-public wash-rooms ScotTissue is the logical, practical and most satisfactory Towel Service both for the user and the owner. Heads of stores, office buildings, hotels, theatres, restaurants, factories, offices, schools and institutions should investigate ScotTissue and send for further interesting and valuable information.

(Continued from Page 74)

complexion, with blue eyes and reddish hair, which he wore pompadour. His father was assistant cashier of the First National Bank—a strict, precise, rather dry man. He had put Walter humbly at work in the bank. The two youths, under their deep cloud of reprobation, were profoundly dissatisfied, aseethe with vague rebellion, ready for any sort of enterprise that would get them away from Marthasville.

Wade Carter had come to Marthasville that spring, his father having bought the Weekly Herald, which was a dubious, unstable sort of proposition. John and Walter someway took up with Wade Carter—or Smiley, as he at once came to be called. He was just twenty-one then, spare, lean-necked, with a thin face and gray-green eyes. His ambition was to be an actor, which his father regarded as only the vagary of a lazy youth who would rather do anything than work. So Smiley, in a desultory and unsatisfactory manner, was learning the printer's trade in his father's office—also seething with unrest and rebellion. He really had a droll humor and a notable gift of mimicry. He was always learning little monologues and reciting them. Finally, under his prompting, the three youths played a farce, followed by some vaudeville sketches, in the old town hall, charging ten cents admission.

There were the three restless youths, talking together and incidentally talking with Sol Rosenbaum—greatly interesting to them as a person who could tell many strange adventures. Only a little of what Sol told was true, but it was all exciting. Now Sol himself was aching for any sort of stake that would get him away from Marthasville. He proposed the vaudeville business.

Smiley Carter took it up in heart-thrilling earnest as a means of achieving his ambition for the stage. Probably John and Walter would have been attracted by the mere adventure, but Sol flattered them outrageously—especially John, who was naturally responsive to that stimulant. John's acting, in fact, was mostly a display of vocal and muscular vigor; but Sol declared it was great. He was astute enough to see that John, once won, would pull the others. It wasn't long before he had John convinced that a promising stage career awaited him.

There was the question of capital. Sol said they ought to have a couple of hundred dollars, for even a show as meritorious as this was going to be might encounter a streak of lean before it struck the fat. The boys managed among them to scrape together a hundred and forty dollars.

Getting away was not so difficult. Inspired by Sol, they said they were going to Newcomb, thirty miles distant, to give an amateur stage performance like the one they had given in the town hall. So, with parental scoffs and objections, but no positive outburst, they got themselves on the train, with a big, old trunk, which Sol had borrowed from the basement of the Emporium, containing the properties.

The less said of the show the better. Sol had two or three dog-eared, paper-bound books of monologues, dialogues, stock jokes, and the like, for Smiley Carter, who really had a talent for comic acting. Walter Hayes could do some amateur conjuring tricks. John Turner had a good, untrained barytone voice. He and Walter knew some college gymnasium stunts. All three of them could dance after a fashion.

Oddly enough, the little show succeeded for about three weeks in making expenses. This was altogether due to Smiley Carter. It was he who made the audience laugh and got the applause. Sol had sense enough to see that; so the thing soon took the form of an entertainment by Mr. Carter, with incidental accompaniments by Messrs. Turner and Hayes.

Smiley lighted and expanded under it. For him it had the sweet and heady taste of success. He felt sure now of making his way to the real stage. His thin face was always shining, always expanding in a happy grin. He was tireless for the show, continually patching up new monologues, thinking out new strokes of "business," working the other two into a position where a comic result could be got. He devised droll handbills and composed funny advance notices for the village papers to print in consideration of a handful of tickets; but he never crowed over the other two or indicated that they weren't contributing as much as he. On the mere money side, as a matter of fact, he had supplied seventy-five dollars, to John's forty an Walter's twenty-five.

The show had been out two weeks, head ing southwest and playing in countr towns, when Sol sprung a surprise on hi associates—a wonderful piece of good luck he said. They were barely making expenses he pointed out; they couldn't make an real money unless they had a woman char acter. That's what would attract the men And by most extraordinary fortune th very woman they needed had fallen righ into their hands; so he had engaged he forthwith at only twenty dollars a week t begin with.

The boys took their godsend in glum as tonishment. The notion of having a strang woman along in their jolly little company was highly disconcerting. But Sol was managing the show. Taken by surprise, it didn't occur to them to rebel. So they suffered themselves to be led up to the dingy little hotel parlor and introduced to their good fortune—Miss Madeline Jones by name, though she appeared on the bills as Señorita Juanita.

She said she was eighteen, and probably wasn't over twenty-three or twenty-four. She also said her mother was Spanish and her father owned a large cattle ranch in Texas. The boys guessed afterward that her descent on the maternal side was Mexican and the ranch largely imaginary. She had dark hair and eyes, and an olive complexion—rather handsome after a fashion, but getting stout. She could dance passably in her threadbare comic-opera costume of a Spanish señorita; also, she could make a loud rhythmic noise, which she called singing, to the strumming of a guitar.

So Señorita Juanita was plumped on their hands. It developed very soon that Sol had known her somewhere and had been writing to her in Chicago, inviting her to join the show. That was how she happened to appear so miraculously in Kirkton, where the boys were introduced to her. In fact, Madeline herself let the company know this, in Sol's presence, the very next day. She said he had deceived her grossly as to the character and prospects of the show. She had a temper that went along with her black eyes and was not at all nice in her choice of adjectives. When she finished wiping up the floor with poor, big-nosed, lying little Sol the boys were almost sorry for him.

Madeline's onslaught, in the presence of the boys, reduced Sol to the state of a trampled worm. His little face and figure had never before been particularly expressive of anything. Now they were as eloquent of dejection as a kicked dog is. From that time on Madeline refused to have anything whatever to do with him—talking to Smiley Carter instead whenever there was a bit of business to be discussed; treating Smiley, in fact, as though he were the manager.

Little Sol bore his humiliation four days—always with his abject air of a kicked dog, keeping himself out of sight as much as possible. Then he silently betook himself and his unrequited love to parts unknown, without saying good-by. Incidentally he took all the company's funds except sixteen dollars, which the boys happened to have among them. Madeline was disgusted with them for letting Sol hold all the money, but she stayed on, perforce, hoping the show would make enough to give her her twenty dollars at the end of the week. Sol's defection, however, was practically the end.

By that time Smiley Carter had fallen in love with Madeline Jones and the show business went to smash pretty rapidly—in a dismal fashion John Turner had already got enough of it. The applause was all for Smiley. Really it was Smiley's show; and trailing along as an unimportant accessory to another man's success was not in the least to John's taste. The audiences were cold to him—sometimes jeered him. He was disgusted with the pigs, and wouldn't appear on the stage at all any more except in some gymnastic exercises that exhibited his fine figure and strength.

It may as well be said for Señorita Juanita that she hadn't the slightest notion of involving herself with any one of three raw youngsters who would probably soon be wiring their parents for railroad fare home. Still, if one penniless youngster was in love with her she didn't mind smiling on the others enough to keep his jealousy awake.

Older people talk with foolish derogation of a youth's love affairs. Anybody who has been a youth and in love knows better.

(Continued on Page 78)

The heat in your automobile engine ranges from 200° to 1000°. This terrific heat breaks down all ordinary oil. After only a few hours' use a large volume of sediment is formed.

Engineering tests show that over 50% of ordinary oil is turned into sediment in a fifty-hour run and loses all lubricating value. This means a loss of four to five horse power.

How the U. S. Bureau of Standards tests automobile oils

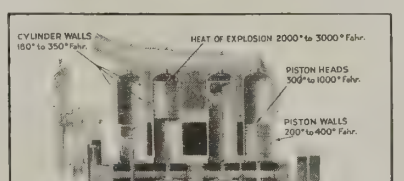
What heat does to automobile oil. How sediment causes friction and wear. What the Faulkner Process means to motorists. 60c to make test will save you over $50 a year

Do you know the greatest weakness of ordinary automobile oils? Do you know the chief cause of wear and expense? Do you know how the U. S. Bureau of Standards tests automobile oils—what test this Bureau considers important?

You will find the answer to these questions in the U. S. Bureau of Standards Technologic Paper No. 73—"Data on the Oxidation of Automobile Cylinder Oils." This publication explains the testing of automobile oils by the sedimentation method and shows the great importance of this test. It sums up as follows:

"The carbonization value of an oil (sediment test) is coming to be recognized as a valuable criterion in testing, and methods for its determination are finding their way into text-books."

Today it is a generally accepted fact that absence of sediment is the best test of a lubricant's efficiency.



Showing Operating Temperatures
These high operating temperatures cause rapid destruction of ordinary automobile oil.

How sediment causes permanent damage

Oil that contains sediment causes metal to metal friction because the sediment takes the place of a large part of the liquid oil. Then the metal surfaces are pressed into each other and the microscopic teeth grab and cut in. That means friction, wear and expense.

The damage caused by sediment cannot be repaired. Eventually the worn parts must be thrown away and new parts purchased and installed.

How to reduce sediment 86%

The illustration at the top of the page shows the sediment test which the U. S. Bureau of Standards has approved. Notice that the left-hand bottle contains fully seven times as much sediment as the other bottle. The first bottle contains ordinary oil after 500 miles of running. The other contains Veedol.

Notice that there is only 5% or 6% sediment in Veedol as against 50% in ordinary oil. This means that by using Veedol you will save friction and wear and greatly reduce your operating expenses.

The Faulkner Process

Veedol is unlike ordinary oil because it is made by the Faulkner Process. This is a new discovery used exclusively by this company, that gives Veedol its remarkable heat-resisting and wear-resisting properties. New equipment for this process costs over $300,000.

Ordinary automobile oil *cannot* be made like Veedol and *cannot* have the same lubricating properties. Veedol resists heat, does not evaporate rapidly, does not carbonize if your motor is in good condition — and finally, reduces sediment 86%.

60c to make test will save you over $50

Five gallons of Veedol will only cost you about 60c more than five gallons of ordinary oil. With five gallons of Veedol you can drive 2000 to 5000 miles, probably two or three times the mileage you get from ordinary oil. Thus you can easily compare costs.

Since sediment is the chief cause of friction, when you eliminate 86% of the sediment you save wear and save expense. Users of Veedol who have kept records say these savings run from $50 to $115 a year.

Make the test as follows: Clean out the crank case of your engine. Fill it with kerosene. Run your motor about *thirty seconds* under its own power. Draw out all kerosene and refill with Veedol. Then make a test run over a familiar road, including steep hills and straight level stretches.

You will find your motor has acquired new pick-up and hill-climbing ability. It will have less vibration and will give greater gasoline mileage. You save friction and cut down expense.

Among the users of Veedol are many large companies that keep a careful record of operating costs, such as the Hudson Motor Car Company, Fifth Ave. Coach Co., the largest bus line in the United States, the Mercer Automobile Co., the Bell Telephone Co. of New York, U. S. Quartermaster's Department, U. S. Navy, Adams Express Company, and the American Express Company.

These users pay more per gallon for Veedol because they save money by using it.

Buy Veedol Today

Over 12,000 dealers sell Veedol. Each dealer has a Veedol Lubrication Chart which specifies the correct grade of Veedol for your car or tractor for both Summer and Winter use. If you cannot get Veedol write for name of dealer who can supply you. Buy a can of Veedol today—begin now to get full efficiency from your car.

A convenient pouring device is supplied with each metal container.

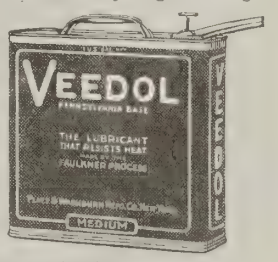
Supplied in—

Sealed Cans
½-gallon, 1-gallon, 5-gallons

Steel Drums
15-gallons, 28-gallons, 53-gallons

Oak Barrels
28-gallons, 50-gallons

Guaranteed when sold in the original package.



Send 10c for 88-page book

Send 10c for our new 88-page book on the construction and lubrication of automobiles, motor boats, tractors and stationary engines. No other book at any price contains as much information on this subject.

PLATT & WASHBURN REFINING COMPANY
1806 Bowling Green Building **New York**

Use Grease of Tested Quality

The Sediment Test shows you how far Veedol excels ordinary oil; Veedol Grease is equally superior to ordinary grease.

There is a Veedol Grease for every purpose:—

1. VEEDOL CUP GREASE.
2. VEEDOL GRAPHITE GREASE—For general lubrication, springs and water pump.
3. VEEDOL TRANS-GEAR COMPOUND—For gears where the housings are *not* tight.
4. VEEDOL TRANS-GEAR OIL—For gears enclosed in *tight* housings.

For washing your car try Keal, the new soap.

(Continued from Page 76)

Often enough it is exactly round twenty-one that the deepest infatuation occurs. So it was with thin-faced, eager, gray-green-eyed Smiley Carter. He had the right intense bilious temperament for it. He went quite daffy over the girl and she made him helplessly, wretchedly jealous. That, also, disgusted John.

More than ever the show fell on Smiley's shoulders, for John would have hardly anything to do with it. There was not only the acting, but the managing, posting up bills, distributing dodgers, seeing the local papers. Walter Hayes helped, yet he was always taking his cue from John. Well, Smiley worked desperately at it in a hell of longing and jealous pangs—gnawing his thumb nail, hardly sleeping, growing visibly hollow-eyed. And Madeline helped him on by coquetting with John or Walter. She was in bad temper all the time, because of her own unpromising plight.

They got to Planters' Grove with six dollars in the bank roll. The town hadn't been billed; so they must lay over a day, which meant they must get two days' expenses out of one night's receipts. That was unpromising enough, the town itself being only a slow place of some fifteen hundred inhabitants. But there was another reason for discouragement. The leading grocer died the day they came to town. The week before a burglar had broken into his house. Rousing, the grocer grappled with him and received two pistol wounds that proved fatal. The whole town was under the stir and pall of the tragedy—not in quite the frame of mind for a dubious vaudeville entertainment.

John Turner and Walter Hayes talked it over very soberly in the shabby hotel that evening—for, in the dismal division that had befallen, Smiley kept pretty much to himself and found it sorry enough company. Walter said they might as well throw up their hands and telegraph home for funds.

"I'll rot first!" said John gloomily. "You know how I got the forty dollars I put in? I sold father's prize shotgun to a traveling man."

He hadn't told that before, and somehow it struck Walter Hayes with awe, as a kind of crime beyond the imagination. Selling Mr. Turner's prize shotgun seemed to him a thing stupendous, fairly superhuman—vaguely belonging in the awful category of Paradise Lost. He realized that John couldn't go back home. And John even then retained an unshakable confidence in himself. It wasn't a great way to St. Louis, he said. They'd beat their way there if they had to, and get good jobs. He stood up tall and straight as he said it, looking so handsome and confident that it seemed a good job must come to him, hat in hand.

Smiley was miserable enough, too, for Madeline had treated him badly that day. He and John and Walter had a dingy double room, with two beds in it and the old property trunk in a corner. Madeline had a room across the hall.

Smiley came into the double room about half past nine, gnawing his thumb nail, his gray-green eyes smoldering, and dropped down on the trunk. As it happened, Walter Hayes had gone down to the hotel office. After a minute—probably with a helpless stirring of jealousy, for Madeline and Walter had been playing cards that afternoon—he said: "Where's Pips?"

"He's across in Madeline's room playing cards with her," said John maliciously.

"That's a lie!" Smiley shot back, his eyes blazing.

"Oh, well, if you want a row, you know ——" said John, standing up.

Walter Hayes came in just then and it was smoothed over. But it left a mark all round.

The next afternoon John and Walter took a long walk, though the day was lowering, with a nasty drizzle, half rain and half snow. Tickets for the evening's performance were on sale at the cigar store near the hotel. They had put off inquiring about the sales—having a presentiment they would get little comfort from the report. Now, however, they stopped at the cigar store to learn their fate. Their forebodings had hardly prepared them for the appalling fact that only four tickets at twenty-five cents each had been sold. Evidently they wouldn't have money enough to pay the hotel bill—say nothing of railroad fare.

The owner of the cigar shop was a lank and sociable person, in his shirt sleeves—a calico shirt without a collar—and the sleeves were rolled up to his elbows, so his red-flannel undershirt showed from the elbows down to his wrists. He said the proprietor of the opera house had just been in looking up the ticket sales and had said he wouldn't open his opera house for the show unless the management paid him some cash before half past seven. The cigar-store man advised the boys to go see the opera-house man. Having two complimentary tickets, he was anxious that the show should be given.

When John and Walter got out on the sloppy sidewalk they had to stop and laugh. Luck was so bad that it was really amusing. They were still laughing when Smiley Carter materialized out of the soggy gloom in front of them—also coming to inquire about the ticket sales. There was no particular reason for it, but the laughter mysteriously grated on him. Walter, with his irrepressible friendliness and a desire to be on good terms, sang out:

"It's grand, Smiley! Only four tickets sold and the opera-house man won't open up for us unless we pay him some money. Run over and slip him a hundred-dollar bill."

And John, with some undigested irritation in his system, was mysteriously moved to remember that Smiley had called him a liar the night before; so he chipped in:

"You're the whole show, anyway, you know."

Then Smiley:

"All you've done so far is sponge on the rest of us. Suppose you dig up!"

So there they were again, scowling and bristling at each other. Again Walter interposed:

"Aw, for Pete's sake, fellows, cut that out! Great Scott! Can't we be friends? We're all broke together, anyway. Come on; let's all go have a bottle of beer!"

It was seldom any of them drank as much as a glass of beer, but that was still a symbol of good fellowship—as well as a bit of bravado against their bad luck. Possibly it would have answered, but John Turner was still cross-grained. It always irked and nettled him to have anybody bristle at him—there was that much belligerence in his composition. So he said:

"I won't drink with a fellow that's called me a liar and not taken it back."

"Not drinking won't keep you from being a liar," Smiley retorted, and turned on his heel and started toward the hotel.

So there was the fighting word again and John Turner started after him. Walter Hayes slipped his hand through John's arm, pleading with him and holding him back. What difference did it make? They knew Smiley was nutty about the girl; let it go.

There was a narrow, smelly barroom in the basement of the hotel, with stairs that led down to it from the street and other stairs at the rear that led up into the yard back of the hotel, where there was a tumble-down livery stable and a long shed, open in front and divided off into stalls, in which farmers hitched their teams in bad weather while doing their marketing. Smiley went down the front steps into the barroom. John yielded somewhat to Walter's brake and even halted at his entreaty, yet finally kept on; so he and Walter went down into the barroom a couple of minutes behind Smiley—and saw something that changed John's intentions.

Near the front door, when Smiley entered, was a farmer—a gaunt old fellow with a long reddish beard, a tousled cap stuck on one side of his head, and a faded brown overcoat that dangled about his frame. He was so drunk he could barely stand. Lurching unsteadily round at the opening of the door, he bumped into Smiley, who gave him an impatient little push and was going on to the bar.

But the farmer clutched out with an unsteady hand, caught the belt of Smiley's ulster, and hung on. So when John and Walter entered they saw the wabbling old man hanging to Smiley's ulster and inquiring incoherently whether he wanted to fight or to wrestle. Wrestling, it appeared, was his strong point. He could throw any man in the county and was anxious to wager any amount on it.

John and Walter stood against the wall, grinning at Smiley's ridiculous position; and Smiley, mad, but realizing the absurdity of a row with the muddled old sot, tried to get away from him. The bartender, in an amazingly dirty white shirt, came from behind the bar and induced the old fellow to let go. The wrestler lurched over to the bar, before which another man stood; but

Three Carpenter-Morton Money Saving Products Each One Makes Old Things New

CAMPBELL'S VARNISH STAIN

For Floors, Furniture and Interior Surfaces

ANY ONE CAN USE IT

Three Reasons Why It Is Better:

1. Because it dissolves grease spots.
2. Because it penetrates the wood fibre.
3. Because it is a perfect union of stain and varnish without sediment.

Those are the big reasons why Campbell's Varnish Stain is so much better than so-called "stains" that obscure the grain of the wood, dry with streaked color and fail to wear.

Campbell's Varnish Stain gives a beautiful, even color. It brings out the full beauty of the grain of the wood—it penetrates the wood fibres and covers with a tough, hard finish that will withstand the hardest use.

Easily applied and dries hard in twelve hours with a smooth, glossy finish.

There are thirteen colors: Natural Wood Color, Light Oak, Dark Oak, Golden Oak, Walnut, Cherry, Mahogany, Green, Rosewood, Flat Black, Gloss Black, Piazza Green and Piazza Red.

Be sure you ask your dealer for Campbell's Varnish Stain and see that you get the yellow can with the famous picture of the camel on it.

In ordering, be sure to give color wanted and the name of the dealer nearest you. Read our special offer opposite. $1.30 value for 45 cents.

Colorite

COLORS OLD AND NEW STRAW HATS

Nothing Just As Good

ANY ONE CAN USE IT

Don't discard your old straw hat just because it is dingy and faded. Colorite will make it as fresh and dainty as new and will color it any shade you desire; you can even match your new dress.

Over two million women last year made new hats out of old ones by the use of Colorite.

Colorite is a liquid, sold in a bottle with a brush for applying. It is waterproof and durable. Easily applied by any one and it dries in 30 minutes.

There are 14 colors: Jet Black, Dull Black, Cardinal Red, Yellow, Navy Blue, Cadet Blue, Sage Green, Cerise, Burnt Straw, Brown, Violet, Lavender, Old Rose and Natural.

Directions on every package for mixing to get most any desired shade.

Colorite is also fine for coloring Satin, Silk and Canvas Slippers and Basketry.

Sold by drug and department stores throughout the United States and Canada. Ask your dealer. If he cannot supply you, we will send a bottle of Colorite (any color) postpaid upon receipt of 25c. See our special offer below.

CAMPBELL'S VIRGIN WHITE

The New Permanent Finish

Made in High Gloss and No Gloss

ANY ONE CAN USE IT

The universal search for a satisfactory white finish that will stand up under all conditions has at last been successfully met by our remarkable new product, Campbell's Virgin White.

It is a pure white finish produced by a new process that makes it wonderfully elastic, durable and washable. Can be used equally well on metal, plaster, wood or any surface, interior or exterior. Cannot crack, chip or peel off.

Campbell's Virgin White is sold with the Carpenter-Morton iron-clad guarantee of satisfaction or money back. The finest finish for living rooms, halls, dining rooms, bathrooms, kitchens, bedrooms, and other woodwork—white beds and other furniture. Easily applied and keeps virgin white under all conditions.

Don't accept just a white enamel. Insist upon Campbell's Virgin White and be sure of satisfaction. Read our special offer below. $1.30 value for 45c.

SPECIAL OFFER—$1.30 Value for 45 Cents

If you are interested in improving the appearance of your home—if you welcome ideas from a national authority on how to select and arrange furniture, rugs, curtains and decorations—this offer of Ekin Wallick's famous book "The Attractive Home" will specially appeal to you.

"The Attractive Home" is a thoroughly practical book, for the family of moderate income. It is superbly illustrated in six colors. Attractively bound in gray boards, it is a book fit to grace your library table and well worth the price of one dollar.

Go to your nearest dealer. He will give you one of Mr. Wallick's books "The Attractive Home" and a ½ pint can of Campbell's Varnish Stain, any color, for 45c, or a 25c bottle of Colorite for 40c. You will be buying $1.30 worth for 45c.

If your dealer cannot supply you we will send you, postpaid, Mr. Wallick's book and the ½ pint can of Campbell's Varnish Stain, any color, for 45c, or the 25c bottle of Colorite upon receipt of 40c, or the book and ½ pint can of Virgin White for 60c.

Lights Legal Anywhere— No Glare

A Soft Flood of Diffused Light

Warner-Lenz at a Road Turn

Daylight on Every Hand

Some use Warner-Lenz because the laws forbid a glare. And safety argues not to blind the drivers and pedestrians ahead.

But where laws don't reach, and roads are lonely, there are overwhelming reasons for the Warner-Lenz.

Note the turn we picture. What good are ordinary shaft-lights, as shown below, piercing straight ahead?

So it is at every turn and corner. The best way to light those turns is with the Warner-Lenz.

All For $3.50 to $5

The Warner-Lenz makes dimmers unnecessary. Everywhere, in country or city, you can use your full-power light.

There is no glare, no dazzle. The light is softened and diffused. Each Warner-Lenz is 176 lenses in one.

The light still reaches 300 to 500 feet ahead. But it also lights almost a full half-circle. It floods the roadside and the road.

Uphill or downhill, straight ahead or turning, all that lies before you is well-lighted. Night-driving becomes like day-driving.

And all these advantages, for the life of your car, cost but $3.50 to $5. See price list below.

Already 350,000 Cars

The Warner-Lenz is a new invention—only a few months old. But 16 famous makers already have adopted them as standard equipment for all their 1917 cars. Note the names of those makers. All made exhaustive tests. All compared the Warner-Lenz with every other type. And all are paying for Warner-Lenz seven times the price they have previously paid.

Already, too, some 350,000 owners have displaced old lenses with the Warner-Lenz. Never in the history of Motordom has a new accessory met such sudden, widespread welcome.

All because the Warner-Lenz means safety. Because it complies with all laws. And because no man who once drives with it will ever again drive without it.

Get Them for Tonight

You are bound to adopt them. But this is to urge that you get them for tonight. Don't use dim lights any longer. Don't use lights which dazzle others. Don't use lights which leave the nearby roadside dark. The Warner-Lenz are lenses only. Simply remove your present lenses and put these in their place.

Go to your accessory dealer or send to us. But remember that Warner-Lenz is the one type which leading engineers are adopting. Let no one convince you that others are as good.

Hatch
ONE-Button
UNION SUIT

NEW YORK has $330,000,000 invested in subways to save a few minutes in getting about town. Yet you can save time every day by wearing the HATCH ONE-BUTTON UNION SUIT without paying a cent more than for the old-fashioned kind of union suit. Its one master button at the chest does all the work that a row of eight or ten used to do, and does it more comfortably too. This popular, sensible, stylish, unique garment will appeal to you for its quality fabrics and splendid workmanship.

You can get these suits in knit goods or in the famous Keep Kool mesh at most good department stores and haberdashers', but if you have the least difficulty send your size with remittance to the manufacturers at Albany, N. Y., and we will gladly supply you direct, delivery prepaid. Satisfaction guaranteed.

PRICES:

Men's Suits—$1, $1.50, $2, $2.50
Boys' Suits—75 cents

(Continued from Page 78)

his sodden brain had just grip enough to hold the idea that he had somehow been affronted. He managed to open his vest and take a long yellow wallet from the inner pocket. Then he kept idiotically slapping the bar with the wallet, calling the bartender and the other man there, and Smiley and everybody in general, to witness that he would wager any amount on a wrestling match between himself and Smiley, or anybody else. Meantime the bartender and the other man were coaxing him to go home.

Presently he staggered over to the rear door. Going out, he attempted to put the wallet in his inner overcoat pocket, but his unsteady hand missed its aim and the wallet fell to the floor by the doorsill. Smiley, John and Walter saw it plainly lying there, and all three started toward it, but Smiley had the advantage of distance, seeing which the other two halted. They saw him open the door and give the wallet a kick with his foot, sending it outside. Then he went out after it.

Immediately John and Walter wondered how much money Smiley had found and whether he was going to divide. It did not occur to either of them that he would restore the money to its owner. Neither of them would have thought of doing that if he had picked up the wallet. They were on a far adventure in a strange country and they frankly regarded the wallet as treasure-trove.

They loitered in the barroom a few minutes and then drifted up to the little hotel office, their minds busy with this odd freak of fortune. They sat over in the corner, speculating under their breaths about the contents of the wallet—all the time rather hoping Smiley would appear and offer to share. After half an hour or so they went up to their room, still in the same frame of mind. Smiley was not there, but after they had sat round some time he came in.

Smiley entered the room quickly, his nervous gray-green eyes shining. It occurred to Walter that he had come from Madeline across the hall. He shut the door after him and sat down on the edge of the trunk. Whatever had been in his mind before respecting them was all swept away in the rush of a new drama.

"There won't be any show to-night," he said. "You fellows can have the properties and go on if you like. I'm going to pull out for Chicago on the night train. We may as well split up."

He pulled the wallet out of his ulster pocket and extracted a sheaf of bills from it. The others caught their breaths as they saw how many there were. With fingers that trembled a little in their eagerness Smiley counted out a hundred and fifty dollars, which he handed over to John.

"There's Pips' share and yours," he said.

They could see that only a few bills remained in his hand. He put them back in the wallet, stuck the latter in his ulster pocket, and stood up, apparently about to go out.

It was the old Smiley's tall, spare frame, his lean face and features; but they felt a certain strangeness in him. He seemed suddenly to have grown up and grown away from them. In his deep excitement there was a man's decision. He took a step and halted.

"We've been all right together," he said. "I wish you fellows good luck. Shake hands."

He held out a lean hand to John, who took it blankly; then to Walter, who managed to say:

"Well, good luck, Smiley!"

He strode out, in his dream, leaving them a good deal agape. But Walter Hayes listened and heard a door across the hall open and shut.

"Say," said he, "he's got Madeline to go with him! I'll bet there was a lot more than a hundred and fifty dollars in that pocketbook."

They stared over that a moment and John Turner vaguely resented it—another man walking off with the stellar rôle!

"Well, let him go," he said. "Smiley's a big fool, but he was square enough with us." Then, abruptly: "Look here, Pips, let's dig right out of this. What do we want to hang round for? I remember there's a train East about six o'clock. Let's take it. Smiley can have the props."

"Sure! That'll suit me," said Walter. In fact, he was nervous about the farmer's money. Neither he nor John had supposed the wallet contained more than ten or twenty dollars at most.

Make YOUR ROOMS BEAUTIFUL at less Cost

Here is a new decorative wall-coating—more beautiful, more modern, more sanitary than wall-paper. Yet in spite of all this it costs you only about One-Third as much to DRESDENIZE a room as to paper it! An average room of 12 by 10 feet can be decorated with this extraordinary paint at a total cost of about Five dollars. One gallon covers 450 to 600 square feet.

Dresden Flat Paint

It comes in a wide variety of extremely agreeable colors, shades and tints, and gives you that soft, velvety, flat effect so much sought after today in our best homes. Pictures and furniture show to best advantage against it, and from the list of colors you can find a shade which exactly harmonizes with the color scheme of your rooms.

It comes all ready for the brush, and can be applied over any surface—plaster, burlap, composition board, metal, wood, or wall-paper itself! It is germ-proof and non-absorbent; can be washed without injury.

Send for book on Dresden Flat which contains color chart and suggested color schemes. If interested in general painting ask also for book on Household Painting.

Paint Dealers, Hardware Dealers and Druggists sell Dresden Flat. If you have trouble in securing it, write us and we will see that you are supplied.

DEALERS: Our national advertising will create a heavy demand for Dresden Flat. *Stock up!* See your jobber, or if he doesn't have it, write us direct.

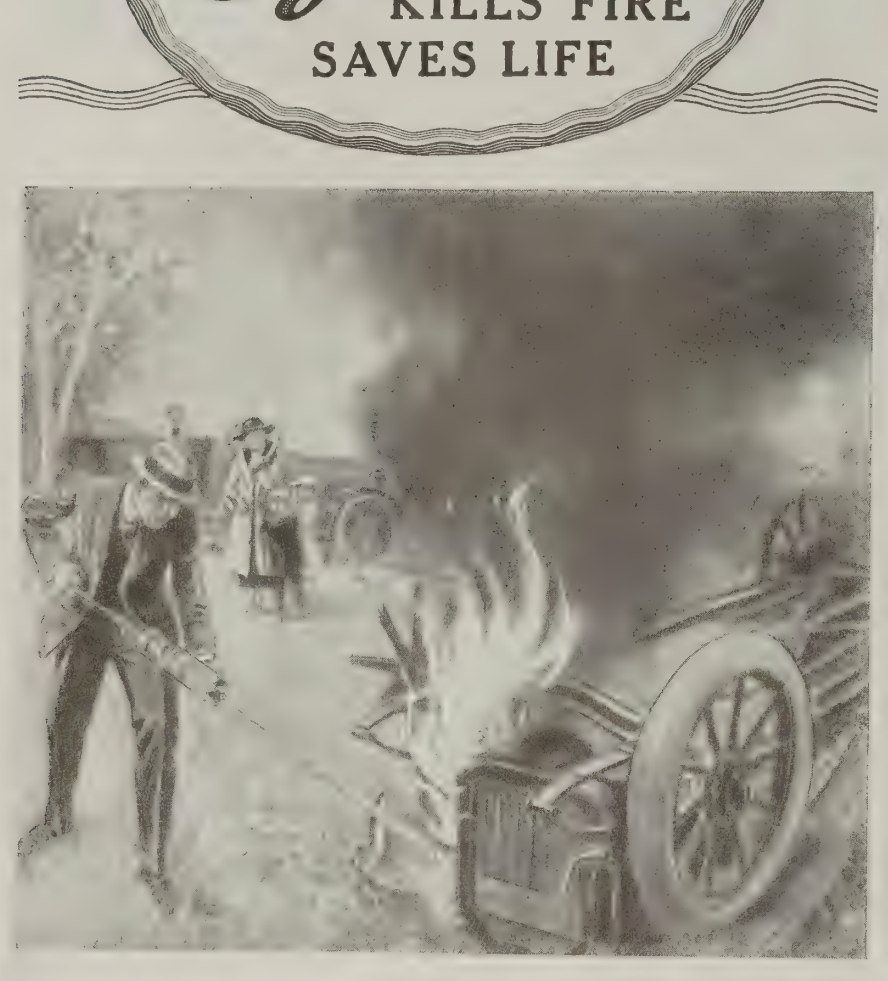
KILLS FIRE
SAVES LIFE



Two Cars Crashed. One Turned Over. Fire!

Three children pinned beneath the wreckage!

I grabbed Pyrene from our car and put out the fire before anybody was burned.

Think what a tragedy there would have been without Pyrene! The fine car burned to a skeleton. The children, imprisoned; held like rats in a trap.

What if they were your children!

Imagine yourself tugging, straining, frantic, unable to lift that 3000 pound car one inch. Your wife—dumb with horror.

Every hour you put off getting Pyrene for your automobile and Pyrene for your home is a monstrous gamble.

$8.00, bracket included. Sold by hardware and auto supply dealers.

Saves 15% on auto insurance cost.
Saves money as well as life.

Pyrene Manufacturing Company, N.Y.
Every Appliance for Fire Protection.

So the two packed their suitcases forthwith. The train East, they found, went at half past six. They didn't wait for dinner at the hotel, but paid their own bills and trudged out in the snow, suitcases in hand, remembering there was a little lunch room down by the station where they could get a bite to eat. Finishing their sandwiches, apple pie and coffee there, they went over to the platform of the small yellow station, where they strolled up and down in the dark through the soggy snow. The train went to St. Louis and they had decided to go there too.

Huddled in overcoat collars, they were taking a turn up the platform perhaps four or five minutes before train time, when they fairly walked into Madeline Jones.

"Hello!" said Walter. "Not going East, are you?"

"Yes," she said, in a way not to encourage further conversation, and turned her back.

Well, there was one more surprise, which left them staring. They thought of Smiley, of course, and looked round for him in the station and on the platform. In a moment the train was whistling.

They waited until they saw Madeline climb aboard. Then they noticed she had no baggage. This was a local train, with only a smoker and one other coach. They got into the smoker. As the train started Walter Hayes solved it.

"That going to Chicago was a blind," he said. "Smiley's sending her on ahead to St. Louis. He's going to meet her."

But Smiley's case, in fact, was very different.

Picking up the wallet and climbing the steps to the belittered yard back of the hotel, Smiley saw the farmer lurching off toward the shed where his team was hitched; so Smiley walked round the building, into the front hall and upstairs to his room. There he opened the wallet. It contained five hundred dollars, received that day from the sale of hogs.

The sight and feel of the bank notes inflamed his infatuated mind as though his dream were tangibly embodied in them. He went straight across the hall to Madeline and astonished her by talking like a man rather than a moony, miserable boy.

He showed her the money and pleaded with her to go to Chicago. Together they could get an engagement in a real show, he said. Madeline was much impressed by the money. She knew good money when she saw it, but had not encountered a bundle of that size for a long time. She agreed to go readily enough.

He told her about finding the money; but she had no interest whatever in its legal or ethical ownership. The only point in her mind was possession.

She committed herself to nothing beyond merely going back to Chicago; but for poor Smiley even that was deliriously enough, and it cost only a smile and a hand-squeeze to have three hundred dollars of the money put into her keeping. After he gave the hundred and fifty to John and Walter, Smiley had fifty left.

Leaving them he returned to Madeline, eating her up with his eyes. When she sent him away it wanted twenty minutes to the hotel's six-o'clock dinner. In his nervous agitation he went down into the barroom to get himself a glass of beer.

The bartender served him and immediately went over to two men who sat talking at a little table near the wall. Whereupon one of the men left hastily by the front door and the other came back to the bar with the bartender. Hardly aware of them, Smiley finished his beer and turned to go. Both men laid hands upon him.

"You're under arrest!" said the man who had been sitting at the table. "The sheriff will be here in a minute. Keep quiet, now!"

He took a pistol from his hip pocket and held the muzzle of it uncomfortably near Smiley's abdomen, while the bartender, scowling a menace, picked up the heavy beer glass.

Astonished, Smiley thought for a few minutes he had been mistaken for somebody else; yet it seemed pretty clear that both pistol and beer glass would come into play if he tried to break away. Then a word dropped by the bartender made him suspect it was the matter of the farmer's wallet. Still, he kept his nerve, scoffing and calling them blockheads.

Very soon the sheriff arrived hastily—a wiry person in a slouch hat and grizzled beard—accompanied by the man who had gone to summon him. The officer promptly backed Smiley against the bar and searched him, finding the wallet, with fifty dollars in it, in his ulster pocket.

Then Smiley began to explain volubly that he had found the wallet outside the barroom door. Fifty dollars was all it contained when he found it, he said. He still quite misapprehended the situation. The only real point of alarm in his mind was that they might get the three hundred dollars away from Madeline. But the businesslike sheriff was disagreeably unconcerned about his explanations. All he wanted was that Smiley should go along with him at once. This brusque treatment—a good deal as though he were a dog on a leash—suggested to Smiley that he might, after all, have to give up his treasure-trove. He wanted to get word to his companions in some way.

"Hold on a minute now!" he expostulated. "I want to speak to a friend up in the office."

The sheriff had no objection to that—presuming that any friend of Smiley's would be a subject of professional interest to him. So he led his captive up to the office. Still Smiley didn't want to involve his companions if he could help it, and he was hoping to get off with no greater loss than that of the money found in his own pocket. In the hotel office he made talk, casting about for means to communicate with those upstairs, hoping John or Walter would appear.

Of course there was a commotion in the office. The news disseminated itself, as it has a mysterious way of doing in a country town. Men drifted in, joining the group round Smiley and the sheriff. This was a few minutes past six o'clock and Madeline had just come downstairs to go to dinner. She glanced into the shabby little parlor on the opposite side of the hall from the office, then into the office. Smiley, with an anxious eye on the hall door, saw her, caught her glance but without making any sign of recognition, and at once sang out loudly:

"Well, you can lock me up if you want to; but I tell you I found the pocketbook!"

Madeline instantly divined the situation; divined, also, that it was no place for an unprotected young female. She dodged back into the shabby little parlor and waited there until the sheriff, with the crowd trooping after him, led Smiley away. Then she flew upstairs, seized her coat and hat, sped down again and made tracks for the railroad station. She, too, knew about the half-past-six train East. Smiley's three hundred dollars was in her stocking. She hadn't the least notion of involving it or her precious self in his trouble.

Smiley was taken over to the brick jail and locked up, where he awaited word from his companions. It was only the next day he learned that all three of them had gone off together on the half-past-six train. He thought they had deserted him by agreement and his heart turned to a lump of rage and despair that choked him. He imagined John and Walter and Madeline sitting together somewhere and laughing at him.

Smiley shut his teeth, refusing to tell the sheriff and the district attorney anything about himself, sullenly repeating that he'd found the pocketbook and that it contained only fifty dollars. The community was still inflamed against criminals in general by the murder of the grocer.

When John and Walter and Smiley next met strange things had happened.

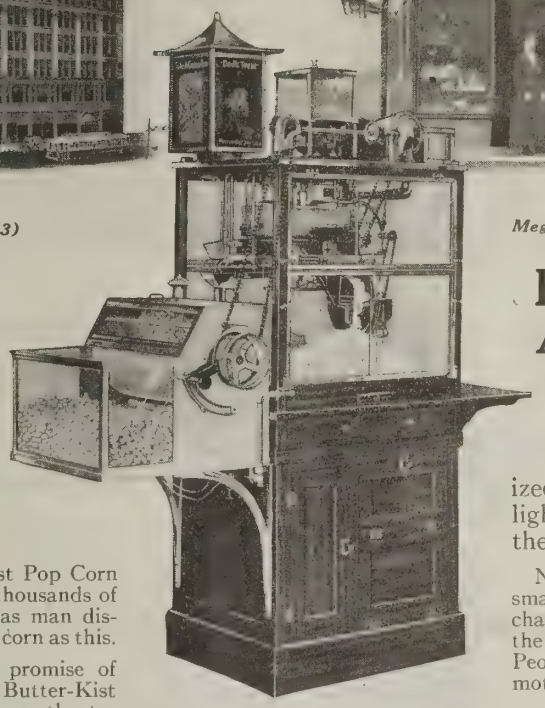
Buy BUTTER-KIST Pop Corn

At Big City Stores Like This

The Fair, Chicago (Population 2,185,283)

At Small Town Stores Like This

Meggenburg's, Manchester, Ia. (Population 2,756)



The Crackling White Pop Corn With the *Toasty Flavor!*

This is the great big difference between Butter-Kist and all other pop corn: Butter-Kist alone has the new-found toasty flavor.

It results from the super-human Butter-Kist Pop Corn machine that is now the center of interest in thousands of stores, theatres, stands, etc. Never before has man discovered a method of making such delicious pop corn as this.

Its coaxing fragrance is but the faintest promise of the tempting treat that you'll find inside the Butter-Kist Bag or Carton. Get one today from the store or theatre in your neighborhood that operates the genuine Butter-Kist machine.

Authorized operators use only pure creamery butter—not cheap fats or lard. They don't have to touch the corn with their hands because this machine does all the work. Pops, removes the unpopped grains and butters each fluffy white tit-bit evenly, *and superheats it to a piping hot toasty taste!*

That's why millions of folks walk blocks to buy Butter-Kist. You'll not be content with ordinary pop corn when you've once tasted this aristocrat of treats.

Look for the Butter-Kist trade-mark on the package. Don't miss the *toasty flavor!*

Extra Profits for Good Alert Dealers—*Write*

The Butter-Kist sales plan and beautiful machine have put the pop corn business on a dignified, organized basis. It is paying the rent, taxes, light and heat for scores of stores, stands, theatres, etc.

No store too large and no town seems too small to yield a large extra business for merchants and managers. You'll be astonished at the way the Butter-Kist machine attracts trade. People stand fascinated by its super-human motion.

Runs itself. Requires no extra help or stock investment. Stands anywhere—occupies only 26 by 32 inches floor space. Earns five times as much per square foot as anything known to trade. Capacity 75 cents to $4 per hour.

Delivered, ready for business, on payment of small sum. Balance can be paid out of Butter-Kist sales.

Amazing signed sales record for men in your line, in towns your size—also photos and full details all contained in our masterly merchandising book called, "The Little Gold Mine." It's FREE!

Get it. Read it! No obligation whatever. Don't lose $2 to $15 daily in Butter-Kist sales by delay. Send today! Use the coupon.

BUTTER-KIST

Pop Corn Machine

Dealers! Read What Owners Say

(Names on Request)

Confectioner writes: Butter-Kist sales average $20 per day. We figure about $4500 net per year. (Lexington, Ky.)

Theatre Manager writes: Profits $5.25 to $8.50 a day from Butter-Kist machine in our lobby. (Utica, N. Y.)

Cigar Store Owner writes: Receipts run $2 to $15 per day even with three competitors nearby. (Frankfort, Ind.)

Grocery Owner writes: Gross receipts from May 25th to Sept. 1st, $555.18. Bought machine for my two boys to run during their vacation. (London, Ohio)

News Stand Owner: We never expected as much business as we get from our three machines. More than satisfied with net results. (San Francisco, Cal.)

Department Store Buyer says: Sold $642.00 worth of Butter-Kist Pop Corn the first month your machine was in operation. (Lowell, Mass.)

Café Manager writes: Net profit first month $251.37 in this town of 3000 inhabitants. Have lost hundreds of dollars by not buying a machine sooner. (Logan, West Va.)

5c and 10c Store Owner: Butter-Kist machine is big advertising attraction. Took in $21.55 the first day. (Sandwich, Ill.)

Druggist Says: Machine has taken in $582.10 in last 86 days. Better returns than anything a druggist has to sell. (Ottawa, Ill.)

Get your mirror to tell you what your friends will not

GO to your mirror now and try to see your skin as others see it. Take your mirror to a window or a strong light, get close to it and really study your skin! Find out just what is keeping your complexion from being attractive.

Once you have done this, and have found out exactly what is the matter with your skin, you have taken the first step toward actually changing your skin and making it more attractive.

For whatever condition you find, *it can be changed!* Conspicuous nose pores, oily skin and shiny nose, a blemished skin, blackheads or a sallow, colorless complexion—you can begin at once to change any of these.

Don't say, "It's useless to try to change the skin itself"

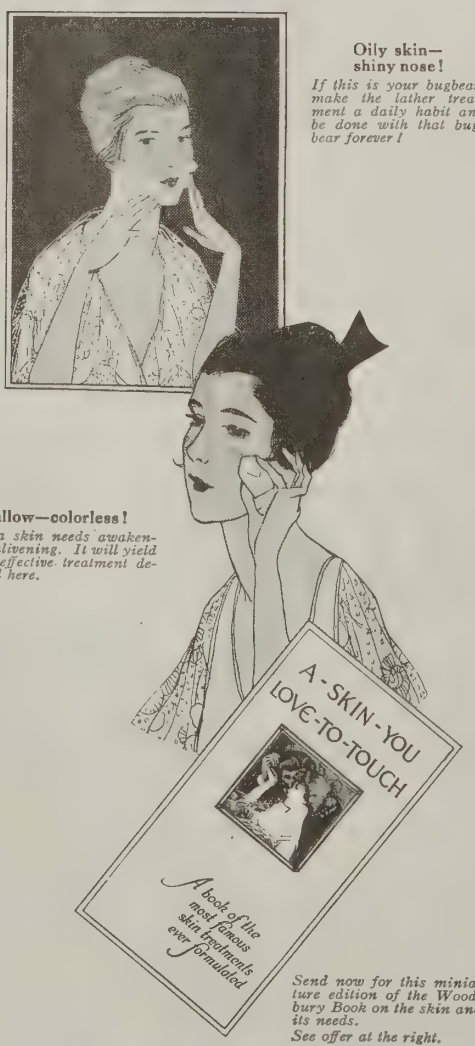
It changes every day in spite of you! As *old* skin dies, new skin forms to take its place. This new skin will be just what *you* make it, and will make or mar your entire complexion accordingly.

By giving this new skin proper external treatment, you can make your complexion just what you would love to have it. Or—by neglecting to give the new skin proper care as it forms every day, you can keep your skin in its present condition and forfeit the charm of "A skin you love to touch."

Which will you do? Will you begin at once to bring to your skin the charm you have longed for? Then start tonight one of the famous Woodbury skin treatments. Two of them are given on this page. Many others are given in the booklet shown. You will be sure to find among these one suited to the needs of *your* skin. Use it persistently, and your complexion *cannot help* taking on, gradually but surely, the greater clearness, freshness and charm of "A skin you love to touch."

Is one of these treatments yours?

If one of the two treatments given here is suited to the needs of *your* skin, you can begin at once—tonight—to bring to your complexion the charm you have longed for. Ask for Woodbury's today wherever you buy your toilet things—at your druggist's or toilet counter. A 25c cake is sufficient for a month or six weeks of either of these treatments. Get a cake today and begin your treatment tonight. You will find Woodbury's Facial Soap for sale by dealers everywhere throughout the United States and Canada.



Oily skin—shiny nose!
If this is your bugbear, make the lather treatment a daily habit and be done with that bugbear forever!

Sallow—colorless!
Such a skin needs awakening, enlivening. It will yield to the effective treatment described here.

Send now for this miniature edition of the Woodbury Book on the skin and its needs. See offer at the right.

So oily and shiny—especially my nose!

First cleanse your skin thoroughly by washing it in your usual way with Woodbury's Facial Soap and warm water. Wipe off the surplus moisture, but leave the skin slightly damp. Now work up a heavy warm water lather of Woodbury's in your hands. Apply it to your face and rub it into the pores thoroughly—always with an upward and outward motion of the finger tips. Rinse with warm water, then with cold—the colder the better. If possible, rub your face for a few minutes with a piece of ice.

So sluggish and colorless

Dip your wash cloth in very warm water and hold to your face. Now take the cake of Woodbury's Facial Soap, dip it in warm water and run the cake itself over your skin. Then dampen the skin and rub the soap in gently with an upward and outward motion. Rinse the face thoroughly, first in tepid water, then in cold. Whenever possible rub the face briskly with a piece of ice. Always dry carefully.

Send 4c now for book of famous skin treatments

One of the Woodbury treatments is suited to the needs of *your* skin. We have space to give just two of them on this page, but you can get them all, together with valuable facts about the skin and its needs, which few people know, in a miniature edition of the large Woodbury Book, "A Skin You Love To Touch." For 4c we will send you this miniature edition and a cake of Woodbury's Facial Soap large enough for a week of any of these famous skin treatments. For 10c we will send the miniature book and samples of Woodbury's Facial Soap, Facial Cream and Powder. Write today! Address **The Andrew Jergens Co., 603 Spring Grove Ave., Cincinnati, Ohio.**

If you live in Canada, address The Andrew Jergens Co. Ltd., 603 Sherbrooke Street, Perth, Ont.

THE FAMILY TREE

(Continued from Page 18)

As Olcott had expected beforehand, the talk dealt, in the main, with the Van Nicht family, which is another way of saying that it went back of and behind, and far beyond, all that might be current and timely and pertinent to the hour. There was no substance to it, for it dealt with what had no substance. As he stayed on, making brave pretense of being interested, he was aware of an interrupting, vaguely irritating sound at his rear and partly to one side of him. Patently the sound was coming from without. It was like a sustained and steady scratching, and it had to do, he figured, with one of the window openings. He took a glance over his shoulder, but he couldn't make out the cause; the window was too heavily shrouded in faded, thick curtains of a sad, dark-green aspect. The thing got on his nerves, it persisted so. Finally he was moved to mention it.

"I beg your pardon," he said, taking advantage of a pause, "but isn't somebody or something fumbling at the window outside?"

"It is a bough of the family elm," explained Mr. Van Nicht. "One of the lower boughs has grown forward and downward, until it touches the side of the house. When stirred by the breeze it creates the sound which you hear."

Internally Olcott shivered. Now that the explanation had been vouchsafed the noise made him think of ghostly fingers tapping at the glass panes—as though the spirit of the tree craved admittance to the dismal circle of these human creatures who shared with it the tribal glory.

"Don't you find it very annoying?" he asked innocently. "I should think you would prune the limb back." He halted then, realizing that his tongue had slipped. There was a little silence, which became edged and iced with a sudden hostility.

"No human hand has ever touched the tree to denude it of any part of its majestic beauty," stated Mr. Van Nicht with a frigid intonation. "Whilst any of this household survives to protect it, no human hand ever shall."

From the elder sister came a murmur of assent.

The conversation had sagged and languished before; after this it sank to a still lower level and gradually froze to death. After possibly ten minutes more of the longest and bleakest minutes he ever recalled having weathered, Olcott, being mentally chilled through, got up and, making a show of expressing a counterfeit pleasure at having been accorded this opportunity of meeting those present, said really he must be going now.

In their places Miss Rachael Van Nicht and her brother rose, standing stiff as stalagmites, and he knew he was not forgiven. It was the younger sister who showed him out, preceding him silently, as he betook himself from the presence of the remaining two.

Close up, in the better light of the hall, Olcott for the first time perceived that Miss Harriet Van Nicht was not so very old. In fact, she was not old at all. He had assumed somehow that she must be sered and soured and elderly, or at least that she must be middle-aged. With this establishment he could not associate any guise of youth as belonging. But he perceived how wrong he had been. Miss Harriet Van Nicht most assuredly was not old. She could not be past thirty, perhaps she was not more than twenty-five or six. It was the plain and ugly gown she wore, a dun-colored, sleazy, shabby gown, which had given her, when viewed from a distance, the aspect of age—that and the unbecoming way in which she wore her hair slicked back from her forehead and drawn up from round her ears. She had fine eyes, as now he saw, with a plaintive light in them, and finely arched brows and a delicate oval of a face; and she was small and dainty of figure. He could tell that, too, despite the fit of the ungraceful frock.

At the outer door, which she held ajar for his passage, she spoke, and instantly he was moved by a certain wistfulness in her tones.

"It was a pleasure to have you come to see us, Mr. Olcott," she said, and he thought she meant it too. "We see so few visitors, living here as we do. Sometimes I think it might be better for us if we kept more in touch with people who live in the outside world and know something of it."

"Thank you, Miss Van Nicht," said Olcott, warming. "I'm afraid, though, I made a rather unfortunate suggestion about the tree. Really, I'm very sorry."

Her face took on a gravity; almost a condemning expression came into it. And when she answered him it was in a different voice.

"A stranger could not understand how we regard the Van Nicht elm," she said. "No stranger could understand! Good night, Mr. Olcott."

At the last she had made him feel that he was a stranger. And she had not shaken hands with him either, nor had she asked him to call again.

He made his way out, through the black magic of the tree's midnight gloom, into the pure white chemistry of the moonlight; and having reached the open, he looked back. Except for that faint luminous blotch, like smeared phosphorus, showing through the blackness from beyond the giant tree, nothing testified that a habitation of living beings might be tucked away in that drear hiding place. He shrugged his shoulders as though to shake a load off them and, as he swung down the silvered street in the flawless night, his thoughts thawed out. He decided that assuredly two of the Van Nichts must go into the book which some day, when time served, he meant to write.

They belonged in a book—those two poor, pale, sapless creatures, enduring a grinding poverty for the sake of a vain idolatry; those joint inheritors of a worthless and burdensome fetish, deliberately preferring the shadow of a moldy past for the substance of the present day. Why, the thing smacked of the Oriental. It wasn't fit and sane for white people—this Mongolian ancestor-worship which shut the door and drew the blind to every healthy and vigorous impulse and every beneficent impulse. Going along alone, Olcott worked himself into quite a brisk little fury of impatience and disgust.

He had it right—they belonged in a book, those two older Van Nichts, not in real life. And into a book they should go—into his book. But the younger girl, now. It was a pitiable life she must lead, hived up there in that musty old house under that terrific big tree with those two grim and touchy hermits. On her account he resented it. He tried to picture her in some more favorable setting. He succeeded fairly well too. Possibly, though, that was because Olcott had the gift of a brisk imagination. At times, during the days which followed, the vision of Harriet Van Nicht, translated out of her present decayed environment, persisted in his thoughts. He wondered why it did persist.

Nearly a month went by, during which he saw no member of that weird household. One day he encountered upon the street the brother and went up to him and, rather against the latter's inclination, engaged him in small talk. It didn't take long to prove that Mr. Van Nicht had very little small talk in stock; also that his one-time air of distant and punctilious regard for the newspaper man had entirely vanished. Mr. Van Nicht was courteous enough, with an aloof and stand-away courteousness, but he was not cordial. Presently Olcott found himself speaking, from a rather defensive attitude, of his own ancestry. He came of good New England stock—a circumstance which he rarely mentioned in company, but which now, rather to his own surprise, he found himself expounding at some length. Afterward he told himself that he had been merely casting about for a subject which might prove congenial to Mr. Van Nicht and had, by chance, hit on that one.

If such were the case, the expedient failed. It did not in the least serve to establish them upon a common footing. The old gentleman listened, but he refused to warm up; and when he bade Olcott good day and limped off, he left Olcott profoundly impressed with the conviction that Mr. Van Nicht did not propose to suffer any element of familiarity to enter into their acquaintanceship. Feeling abashed, as though he had been rebuked after some subtle fashion for presumption and forwardness, Olcott dropped into the handiest bar and had a drink all by himself—something he rarely did. But this time he felt that the social instinct of his system required a tonic and a bracer.

Over-Sunday Hotels

The traveler's Sunday is comfortable and pleasant at any Hotel Statler.

Before he wakes a morning paper is put under his door—noiselessly—with the compliments of the house.

If he wants to breakfast in his room no extra charge is made for room-service.

If he wants to write letters in his room he doesn't have to ask for stationery—his desk is plentifully supplied. If he wants ice-water he has but to open a faucet.

If he wants to loaf downstairs, comfortable, luxurious lounges, with chairs and sofas built for tired men—and lazy men—await him. There is *good* music at dinner-time. Well-selected libraries are at his disposal—free, of course.

And always there is that courteous, gracious, *interested* personal service that we are proud to call Hotels Statler Service—a complete service, as befits "the complete hotels."

The Largest Hotel in the World

HOTEL PENNSYLVANIA, New York, will be a Statler-operated hotel. Now building, opposite Pennsylvania Station. With its 2200 rooms, 2200 baths, it will be larger than any other hotel now in existence or under construction—and will likewise set new high standards of convenience, service and distinction.

Hotel Statler, St. Louis, 650 rooms, 650 baths, (opens this fall)

HOTELS STATLER

BUFFALO - CLEVELAND - DETROIT

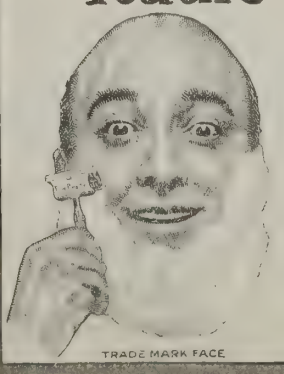
(Now building in St. Louis and New York)

Hair Tested "Radio" Blades

Every "Radio" Blade cuts a hair at a half dozen places along its edge before being wrapped in its moisture proof edge protector.

This is the last of many tests which absolutely assures a keen-cutting edge to every "Radio" Blade—a quick, clean, caressing shave every time to every user.

'Ever-Ready' Radio Blades 6 for 30¢



And "Radio" Steel holds this wonderful edge for many comfortable shaves. The process by which "Radio" Steel is made and tempered is the secret of the wonderful shaving ability of the 'Ever-Ready' Safety Razor.

"Radio" Blades fit other frames similar in construction to the 'Ever-Ready.' Try them in your razor But the 'Ever-Ready' Safety Razor and "Radio Blades are an unbeatable combination.

The 'Ever-Ready' Outfit complete with Twelve "Radio" Blades for $1.00 on sale everywhere.

Brooklyn, N. Y.

"Life Insurance Without Agents is a Distinct Public Service"

Postal Life Method Sanctioned by the United States Supreme Court

Timely Talk on a Vital Subject

(Scene: Pullman Smoking Compartment. Judge Kirkland and Lawyer Roberts continuing a conversation begun at dinner.)

Judge: "Well, this business of selling direct-by-mail throughout the country is surely very popular with the public."

Lawyer: "Yes, but some of my clients say that in the interest of local merchants the States ought to find some way to check it."

Judge: "I don't see why they should check it or how they can do it. Selling merchandise is an interstate business. I can sell and you can buy in the best market wherever it is. What can a State do about it?"

Lawyer: "You're probably right, I'll admit. The States can't very well put the 'kibosh' on legitimate interstate business."

Judge: "Certainly not. The States cannot hold up arbitrarily any direct-by-mail transaction, nor can they tax life-insurance premiums thus sent by mail."

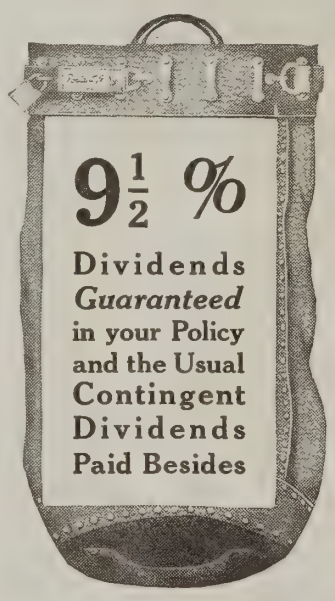
Lawyer: "How's that?"

Judge: "Policies are written for people, 'direct,' all over the country, and have been for years. The United States Supreme Court has decided unanimously that life-insurance premiums on such policies are exempt from State taxes. The usual license-fees and charges also do not apply to the Postal. All this helps policyholders."

Lawyer: "Oh, you refer to the Postal Life?"

Judge: "Yes, that Company hasn't any agents and never has had. The applicant deals direct, personally or by letter. The method is good common sense as well as sanctioned by law."

Lawyer (laughing): "Guess you're right. I wrote the Postal once myself just to find out how the Company did business, but never followed it up."



Judge (laughing): "I go you one better; I not only wrote them, but took out a policy nine or ten years ago and have carried it ever since."

Lawyer: "How's the cost?"

Judge: "Lower than in other companies for the same kind of insurance—legal reserve—and besides that they give me a free medical examination each year just so I can keep in trim."

Lawyer: "That's pretty good. You live in Idaho and deal with a New York company by mail. Did you ever look the Company up?"

Judge: "Only to know that it is chartered and licensed by New York State, whose laws are very strict, but I called on them when I was East last year. They're now in their new building on Fifth Avenue."

Lawyer: "So I heard. Believe I'll write them to figure on a policy for me."

Judge: "Don't think you could do better. Life insurance without agents is a distinct public service. The point is made, and I think it is a good one, that the Company is subject to the United States Postal Authorities. The Postal simplifies the business, saves you money, safeguards your health and will treat you right in every way. I'd take another policy myself if I hadn't passed the age limit."

That tells the story. Thoughtful insurers like Judge Kirkland take policies with the Postal and not only hold on to them but are disposed to take new insurance, while those like the lawyer Roberts, who at first write out of curiosity, at last find they can save money by taking a Postal Policy, and they do it.

Find Out What *You* Can Save

You should take advantage of Postal benefits and economies. Call at the Company's office or simply write and say: "*Mail insurance particulars as mentioned in The Saturday Evening Post for March 24th.*" In your letter be sure to give:

1. Your full name. 2. Your occupation.
3. The exact date of your birth.

You will receive full information based on official reports regularly filed with the New York State Insurance Department. Writing places you under no obligations and no agent will be sent to visit you. The resultant commission-savings go to *you* because you deal *direct*.

POSTAL LIFE INSURANCE COMPANY
WM. R. MALONE, President
511 Fifth Avenue, Cor. 43rd St., New York

New Postal Life Building

Within the next day or two chance gave him opportunity for still further insight into the estimation in which he was held by other members of the Van Nicht family. This happened shortly before the close of a cool and showery July afternoon. Leaving his desk, he took advantage of a lull in the rain to go for a solitary stroll before dinner. He was briskly traversing a side street, well out of the business district, when suddenly the downpour started afresh. He pulled up the collar of his light raincoat and turned back to hurry to the Hotel Brainard, where he lived. Going in the opposite direction a woman pedestrian, under an umbrella, met him; she was heading right into the slanting sheets of rain. In a side-long glance he recognized the profile of the passer, and instantly he had faced about and was alongside of her, lifting his soaked hat.

"How d'you do, Miss Van Nicht?" he was saying. "I'm afraid you'll make poor headway against this rainstorm. Won't you let me see you safely home?"

It was the younger Miss Van Nicht. Her greeting of him and her smile made him feel that for the moment at least he would not be altogether an unwelcome companion. As he fell in beside her, catching step with her and taking the umbrella out of her hands, he noted with a small throb of pity that her cheap dark skirt was dripping and that the shoes she wore must be insufficient protection, with their thin soles and their worn uppers, against wet weather. He noted sundry other things about her: Seen by daylight she was pretty—undeniably pretty. The dampness had twisted little curls in her primly bestowed hair, and the exertion of her struggle against the storm had put a becoming flush in her cheeks.

"I was out on an errand for my sister," she said. "I thought I could get home between showers, but this one caught me. And my umbrella—I'm afraid it is leaky."

Undeniably it was. Already the palm of Olcott's hand was sopping where water, seeping through open seams along the rusted ribs, had run down the handle. Each new gust, drumming upon the decrepit cloth, threatened to make a total wreck of what was already but little better than the venerable ruin of an umbrella.

"You must permit me to see you home then," he said. He glanced up and down, hoping to see a cab or a taxi. But there was no hireable vehicle in sight and the street cars did not run through this street. "I'm afraid, though, that we'll have to go afoot."

"And I'm afraid that I am taking you out of your way," she said. "You were going in the opposite direction, weren't you, when you met me?"

"I wasn't going anywhere in particular," he lied gallantly; "personally I rather like to take a walk when it's raining."

For a bit after this neither of them spoke, for the wind all at once blew with nearly the intensity of a small hurricane, buffeting thick rain spray into their faces and spattering it up about their feet. She seemed so small—so defenseless almost, bending forward to brace herself against its rude impetuosity. He was mighty glad it was his hand which clasped her arm, guiding and helping her along; mighty glad it was he who held the leaky old umbrella in front of her and with it fended off some part of the rain from her. They had traveled a block or two so, in company, when the summer storm broke off even more abruptly than it had started. There was an especially violent spatter of especially large drops, and then the wind gave one farewell wrench at the umbrella and was gone, tearing on its way.

In another half minute the setting sun was doing its best to shine out through a welter of shredding black clouds. There were wide patches of blue in the sky when they turned into Putnam Street and came within sight of the Van Nicht elm, rising as a great, green balloon at the head of it. By now they were chatting upon the basis—almost—of a seasoned acquaintanceship. Olcott found himself talking about his work. When a young man tells a young woman about his work, and is himself interested as he tells it, it is quite frequently a sign that he is beginning to be interested in something besides his work, whether he realizes it yet or not. And in Miss Van Nicht he was pleased to discern what he took to be a sympathetic understanding, as well as a happy aptness and alertness in the framing of her replies. It hardly seemed possible that this was the second time they had exchanged words. Rather it was as though they had known each other for a considerable period; so he told himself.

But as, side by side, they turned in at the rickety gate of the ancestral dooryard and came under the shadow of the ancestral tree, her manner, her attitude, her voice, all about her seemed to undergo a change. Her pace quickened for these last few steps, and she cast a furtive, almost an apprehensive glance toward the hooded windows of the house.

"I'm afraid I am late—my sister and my brother will be worrying about me," she said a little nervously. "And I am sorry to have put you to all this trouble on my account."

"Trouble, Miss Van Nicht? Why, it was ——"

"I shan't ask you in," she said, breaking in on him. "I know you will want to be getting back to the hotel and putting on dry clothes. Good-by, Mr. Olcott, and thank you very much."

And with that she had left him, and she was hurrying up the porch steps, and she was gone, without a backward look to where he stood, puzzled and decidedly taken aback, in the middle of the seamed flags of the walk.

He was nearly at the gate when he discovered that he had failed to return her umbrella to her; so he went back and knocked at the door. It was the elder sister who answered. She opened the door a scant foot.

"How do you do, sir?" she said austerely.

"I forgot to give your sister her umbrella," explained Olcott.

"So I perceive," she replied, speaking through the slit with a kind of sharp impatience, and she took it from him. "Thank you! We are most grateful to you for your thoughtfulness."

She waited then, as if for him to speak, providing he had anything to say—her posture and her expression meanwhile most forcibly interpreting the attitude in which he must understand that he stood here. It was plain enough to be sensed. She resented—they all resented—his reappearance in any rôle at the threshold of their home. She was profoundly out of temper with him and all that might pertain and appertain to him. So naturally there was nothing for him to say except "Good evening," and he said it.

"Good evening," she said, and as he bowed and backed away she closed the door.

Outside the fence he halted and looked about him, then he looked back over the gapped and broken palings. Everywhere else the little world of Putnam Street had a washed, cleansed aspect; everywhere else nearly the sun slid its flattened rays along the refreshed and moistened sod and touched the wayside weeds with pure gold; but none of its beams slanted over the side hill and found a way beneath the interlaced, widespread bulk of the family tree. He saw how forlornly the lower boughs, under their load of rain water, drooped almost to the earth, and how the naked soil round about the vast trunk of it was guttered with muddy, yellow furrows where little torrents had coursed down the slope, and how poisonously vivid was the mold upon the trunk. The triangular scar in its lower bark showed as a livid greenish patch. Still farther back in the shadow the outlines of the old gray house half emerged, revealing dimly a space of streaked walls and the sodden, warped shingles upon one outjutting gable of the peaked roof.

"It's not an honest elm," thought Olcott to himself in a little impotent rage. "It's a cursed devil tree, a upas tree, overshadowing and blighting everything pleasant and wholesome that might grow near it. Bats and owls and snails belong back there—not human beings. There ought to be a vigilance committee formed to chop it down and blast its roots out of the ground with dynamite. Oh, damn!"

In his pocket he had a letter from the presiding deity of the organization that owned the string of papers of which the paper he edited was a part. In that letter he was invited to consider the proposition of surrendering his present berth with the Schuylerville News-Ledger and going off to Europe, as special war correspondent for the syndicate. He had been considering the project for two days now. All of a sudden he made up his mind to accept. While the heat of his petulance and disappointment was still upon him, he went that same evening and wired his acceptance to headquarters. Two days later, with his credentials in his pocket and a weight of sullen resentment against certain animate

A Liberal Policy—a Popular One

There is a broad-minded, liberal policy back of each Stewart Product that reaches out and encompasses every bit of Stewart work.

It is a policy involving endless scientific research; skillful, high-grade workmanship and wide-awake, progressive methods.

It calls for optimism and enthusiasm. It makes all previous Stewart achievements merely range lights by which to steer our course towards even greater success.

We are the first and only builders of speedometers, gasoline systems, tire pumps, warning signals, etc., to give national service, with branches and service stations in every motoring center in the country.

Our organization—manufacturing, sales and service—is by far larger than any other in its field.

We are probably the largest advertisers of automobile accessories in the world—as well as the largest accessory manufacturers.

This widespread publicity is of immeasurable benefit to dealers handling Stewart Products. It has made these famous products the best known, most widely demanded automobile accessories built.

It also helps you. It is your safeguard—your best guarantee of Stewart dependability. The big advertiser is the one who has reliable merchandise to sell.

We test all manner of methods, materials and designs. We do not sit on the fence while others try them out. We search continually for new ideas—new improvements. We do not keep pace. We set it.

We perfected the magnetic type speedometer and are the only manufacturers building instruments of this famous type.

We gave to the world the vacuum gasoline system, making possible the streamline body for automobiles and assuring every user a smooth, positive flow of gas at all times.

We originated the magnetic type speedometer for Ford cars which today is the most popular Ford accessory built.

We built the first fool-proof motor driven tire pump now so popular both with car manufacturers and the public.

We were the first to build high grade automobile signals in large quantities and for a moderate price.

We developed the wonderful four-point V-Ray Spark Plug to the point of perfection.

And so continues the practical application of the Stewart policy—ever searching, ever striving to develop and make more nearly perfect those accessories which motorists know are necessities.

Each Stewart Product has made an instant popular hit on its own, individual merits. These are the accessories you want on your car.

Insist upon having Stewart Products.

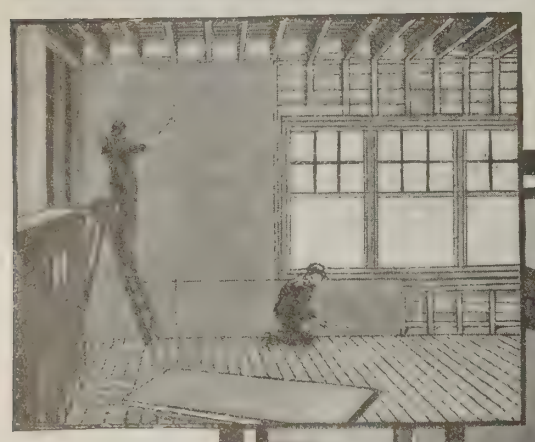
BEAVER BOARD

FOR BETTER WALLS & CEILINGS



Beaver Board is quickly and easily put up with saw, hammer and nails.

BEAVER BOARD

You can't expect Beaver Board results unless this trade-mark is on the back of the board you buy.

At First or At Last?

Sooner or later you will Beaver Board that room.

The one question is whether you will do it at first or at last. For here's a significant fact. A surprisingly large proportion of all the Beaver Board that is made is used for the purpose of covering over cracked worn-out lath and plaster walls.

You never heard of anyone putting lath and plaster over Beaver Board. When a Beaver Board wall or ceiling is up, it's up to stay.

True enough, Beaver Board will make a new room out of an old one. But even so, it isn't quite as satisfactory as if it had been Beaver Board to start with.

Why the useless expense?

Why not have your Beaver Board room at first instead of at last and avoid the extra job and extra cost?

Beaver Board is a lumber product built up from the fibre of clean white spruce. It comes in sturdy, durable, handsomely-surfaced panels without a crack, knot or blemish. It will last as long as the building in which it is used. It resists heat, cold and sound better than lath and plaster. It is completely sanitary and easy to apply. Warping is prevented by a special patented *Sealtite* process which no other manufacturer is licensed to employ.

Send for booklet—"Beaver Board and Its Uses."

THE BEAVER BOARD COMPANIES, 101 Beaver Road, Buffalo, N. Y.

Canada: 301 Wall St., Beaverdale, Ottawa.
England: 4 Southampton Row, London, W. C.
Australia: Builders' Exchange, Sydney, N. S. W.

United States Branches at Boston, New York, Baltimore, Cleveland, Detroit, Chicago, Minneapolis, Kansas City and San Francisco.

Manufacturers also of Beaver Greenboard, Beaver Blackboard and Beaverbilt Utilities

(Continued from Page 36)

and inanimate objects in his heart, he was aboard a train out of Schuylerville, bound for New York, and thereafter, by steamer, for foreign parts.

He was away, concerned with trenches, gas bombs, field hospitals and the quotable opinions of sundry high and mighty men of warcraft and statecraft, for upwards of a year. It was a most remarkably busy year, and the job in hand claimed jealous sovereignty of his eyes, his legs and his brain, while it lasted.

He came back, having delivered the goods to the satisfaction of his employers, to find himself promoted to a general supervision of the editorial direction of the papers in his syndicate, with a thumping good salary and a roving commission. He willed it that the first week of his incumbency in his new duties should carry him to Schuylerville. In his old office, which looked much the same as it had looked when he occupied it, he found young Morgan, his former assistant, also looking much the same, barring that now Morgan was in full charge and giving orders instead of taking them. Authority nearly always works a change in a man; it had in this case.

"Say, Olcott," said Morgan after the talk between them had ebbed and flowed along a little while, "you remember that old geezer, Van Nicht, don't you? You know, the old boy who wrote the long piece about his family, and you ran it?"

"Certainly I do," said Olcott. "Why—what of him?"

Instead of answering him directly, Morgan put another question:

"And of course you remember the old Van Nicht house, under that big, whopping elm tree, out at the end of Putnam Street, where he used to live with those two freakish sisters of his?"

"Where he used to live? Doesn't he—don't they—live there now?"

"Nope—tree's gone and so is the house."

"Gone? Gone where?"

"Gone out of existence—vamoosed. Here's what happened, and it's a peach of a tale too: One night about six months ago there came up a hard thunderstorm—lots of lightning and gobs of thunder, not to mention rain and wind a plenty. In the midst of it a bolt hit the Van Nicht elm—ker-flewie—and just naturally tore it into flinders. When I saw it myself the next day it was converted from a landmark into the biggest whisk broom in the world. The neighbors were saying that it rained splinters round there for ten minutes after the bolt struck. I guess they didn't exaggerate much at that, because ——"

"Was the house struck too? Was anybody hurt?" Olcott cut in on him.

"No, the house escaped somehow—had a few shingles ripped off the roof, and some of its windows smashed in by flying scraps; that was all. And nobody about the place suffered anything worse than a stunning. But the fright killed the older sister—Miss Rachael. Anyhow, that's what the doctors think. She didn't have a mark on her, but she died in about an hour, without ever speaking. I guess it was just as well, too, that she did. If she had survived the first shock I judge the second one would just about have finished her."

"The second shock? You don't mean the lightning?"

"No, no!" Morgan hastened to explain. "Lightning never plays a return date—never has need to, I take it. I mean the shock of what happened after daylight next morning.

"That was the queerest part of the whole thing—that was what made a really big story out of it. We ran two columns about it ourselves, and the A. P. carried it for more than a column.

"After the storm had died down and it got light enough to see, some of the neighbors were prowling round the place sizing up the damage. Right in the heart of the stump of the elm, which was split wide open—the stump, I mean—they found a funny-looking old copper box buried in what must have been a rotted-out place at one time, maybe ninety or a hundred years ago. But the hollow had grown up, and nobody ever had suspected that the tree wasn't solid as iron all the way through, until the lightning came along and just naturally reached a fiery finger down through all that hardwood and probed the old box out of its cache and, without so much as melting a hinge on it, heaved it up into sight, where the first fellow that happened along afterward would be sure to see it. Well, right off they thought of buried treasure, but being honest they called old Van Nicht out of the house, and in his presence they opened her up—the box I mean—and then, lo and behold, they found out that all these years this town had been worshiping a false god!

"Yes, sir, the great and only original Cecilius Jacob Van Nicht was a rank fake. He was as bogus as a lead nickel. There were papers in the box to prove what nobody, and least of all his own flesh and blood, ever suspected before. He wasn't a hero of the Revolution. He wasn't a colonel under George Washington. He wasn't of Holland-Dutch stock. His name wasn't even Van Nicht. His real name was Jake Nix—that's what it was, Nix—and he was just a plain, everyday Hessian soldier—a mercenary bought up, along with the other Hessians, and sent over here by King George to fight against the cause of liberty, instead of for it.

"As near as we can figure it out, he changed his name after the war ended, before he moved here to live, and then after he died—or anyhow when he was an old man—his son, the second Cecilius Jacob, concocted the fairy tale about his father's distinguished services and all the rest of it. The son was the one, it seems, who capitalized the false reputation of the old man. He lived on it, and all the Van Nichts who came after him lived on it too—only they were innocent of practicing any deception on the community at large, and the second Van Nicht wasn't. It certainly put the laugh on this town, not to mention the local aristocracy, and the D. A. R.'s and the Colonial Dames and the rest of the blue bloods generally, when the news spread that morning.

"Oh, there couldn't be any doubt about it! The proofs were all right there and dozens of reliable witnesses saw them—letters and papers and the record of old Nix's services in the British army. In fact there was only one phase of the affair that has remained unexplained and a mystery. I mean the presence of the papers in the tree. Nobody can figure out why the son didn't destroy them, when he was creating such a swell fiction character out of his revered parent. One theory is that he didn't know of their existence at all—that the old man, for reasons best known to himself, hid them there in that copper box and that then the tree healed up over the hole and sealed the box in, with nobody but him any the wiser, and nobody ever suspecting anything out of the way, but just taking everything for granted. Why, it was exactly as if the old Nix had come out of the grave after lying there for a century or more, to produce the truth and shame his own offspring, and incidentally scare one of his descendants plumb to death."

"What a tragedy!" said Olcott. But his main thought when he said it was not for the dead sister but for the living.

"You said it," affirmed Morgan. "That's exactly what it was—a tragedy, with a good deal of serio-comedy relief to it. Only there wasn't anything very comical about the figure the old man Van Nicht cut when he came walking into this office here about half past ten o'clock that day, with a ragged piece of crêpe tied round his old high hat. Olcott, you never in your life saw a man as badly broken up as he was. All his vanity, all his bumptiousness was gone—he was just a poor, old, shabby, broken-spirited man. I'd already gotten a tip on the story and I'd sent one of my boys out to find him and get his tale, but it seemed he'd told the reporter he preferred to make a personal statement for publication. And so here he was with his statement all carefully written out and he asked me to print it, insisting that it ought to be given as wide circulation as possible. I'll dig it up for you out of the files in a minute and let you see it.

"Yes, sir, he'd sat down alongside his sister's dead body and written it. He called it A Confession and an Apology, and I ran it that way, just as he'd written it. It wasn't very long, but it was mighty pitiful, when you took everything into consideration. He begged the pardon of the public for unwittingly practicing a deceit upon it all through his life—for living a lie, was the way he phrased it—and he signed it 'Jacob Nix, heretofore erroneously known as Cecilius Jacob Van Nicht, 4th.' That signature was what especially got me when I read it—it made me feel that the old boy was literally stripping his soul naked before the ridicule of this town and the ridicule of the whole country. A pretty manly, straightforward thing, I called it,

One of Every 7 Men Is Killed or Injured by Accident Each Year.
Which Will It Be?

YOU may be the one. Your chance is no better than those of the other six. Protect yourself and your family now—while you can. Three cents a day will do it if you are in a "Preferred" occupation. The cost of a couple of newspapers brings $1,250 to $3,250 in case of death by accident, $5 to $10 weekly income, $1,000 to $3,000 for loss of two limbs or eyes, $500 to $1,500 for loss of one hand, foot or eye, $250 for death from any cause. ($50 added to above payments for death if you insure while under 40 years of age.) Larger amounts at proportionate cost.

ÆTNA-IZE

If you have other policies, add this because it's so good. If you have no other policy, get this one now. You're in danger every moment. Send the coupon for the whole story and protect your family while you can.

You Get a Weekly Income when Disabled by Accident

It isn't only railroad wrecks and shipwrecks and falling elevators you have to fear.

One man was hit in the eye by a snapping rubber band. It put him in bed for six weeks. He was Ætna-ized, so he drew his weekly indemnity.

One man was struck in the head with a baseball. He had to have a surgical operation and was unable to leave his home for three weeks. He drew his weekly Ætna benefit and Ætna paid for his operation.

One man tripped on a flight of stairs, fell, broke his ankle, went to bed for two months. He was Ætna-ized, so he drew a weekly income and turned his hospital bill over to Ætna.

and I liked him better for having done it than I ever had liked him before.

"Well, I told him I would run the card for him and I did run it, and likewise I toned down the story we carried about the exposure too. I'm fairly well calloused, I guess, but I didn't want to bruise the old man and his sister any more than I could help doing. But, of course, I didn't speak to him about that part of it. I did try, in a clumsy sort of way, to express my sympathy for him. I guess I made a fairly sad hash of it, though. There didn't seem to be any words to fit the situation. Or, if there were, I couldn't think of them for the moment. I remember I mumbled something about letting bygones be bygones and not taking it too much to heart and all that sort of thing.

"He thanked me, and then, as he started to go, he stopped and asked me whether by any chance I knew of any opening—any possible job for a person of his age and limitations. I remember his words: 'It is high time that I was casting about to find honorable employment, no matter how humble. I have been trading with a spurious currency for too long. I have spent my life in the imposition of a monumental deceit upon this long-suffering community. I intend now, sir, to go to work to earn a living with my own hands and upon my own merits. I wish to atone for the rôle I have played.'

"It may have been imagination, but I thought there was a kind of faint hopeful gleam in his eye as he looked at me and said this; and he seemed to flinch a little bit when I broke the news to him that we didn't have any vacancies on the staff at present. I sort of gathered that he rather fancied he had literary gifts. Literary gifts? Can't you just see that poor, forlorn old scout piking round soliciting want ads at twenty cents a line or trying to cover petty assignments on the news end? I told him, though, I'd be on the lookout for something for him, and he thanked me mighty ceremoniously and limped out, leaving me all choked up. Two days later, after the funeral, he telephoned in to ask me not to trouble myself on his account, because he had already established a connection with another concern which he hoped would turn out to be mutually advantageous and personally lucrative; or words to that effect.

"So I did a little private investigating that evening and I found out where the old chap had connected. You see I was interested. A live wire named Garrison, who owned the state rights for selling the World's Great Classics of Prose and Poetry on subscriptions, had landed here about a week before. You know the kind of truck this fellow Garrison was peddling? Forty large, hard, heavy volumes, five dollars down and a dollar a month as long as you live; no blacksmith's fireside complete without the full set; should be in every library; so much for the full calf bindings; so much for the half leather; give your little ones a chance to acquire an education at a trifling cost; come early and avoid the rush of those seeking to take advantage of this unparalleled opportunity; price positively due to advance at the end of a limited period; see also our great clubbing offer in conjunction with Bunkem's Illustrated Magazine—all that sort of guff.

"Well, Garrison had opened up headquarters here. He'd brought some of his agents with him—experts at conning the simple peasantry and the sturdy yeomanry into signing on the dotted line A and paying down the first installment as a binder; but he needed some home talent to fill out his crew, and he had advertised with us for volunteers. Old Van Nicht—Nix, I mean—had heard about it, and he had applied for a job as canvasser, and Garrison had taken him on, not on salary, of course, but agreeing to pay him a commission on all his sales. That was what I found out that night."

Before Olcott's eyes rose a vision of a dried-up, bleak-eyed old man limping from doorstep to doorstep, enduring the rebuffs of fretful housewives and the insolence of annoyed householders—a failure, and a hopeless, predestined failure at that.

"Too bad, wasn't it?" he said.

"What's too bad?" asked Morgan.

"About that poor old man turning book agent at his age, with his lack of experience with the ways of the world."

"Save your pity for somebody that needs it," said Morgan, grinning. "That old boy doesn't. Why, Olcott, he was a hit from the first minute. This fellow Garrison was telling me about him only last week. All that stately dignity, all that Sir Walter Raleigh courtesy stuff, all that faculty for using the biggest possible words in stock, was worth money to the old chap when he put it to use. It impressed the simple-minded rustic and the merry villager. It got him a hearing where one of these gabby young canvassers with a striped vest and a line of patter memorized out of a book would be apt to fail. Why, he's the sensation of the book-agent game in these parts. They sick him on to all the difficult prospects out in the country, and he makes good nine times out of ten. He's got four counties in his territory, with all expenses paid, and last month his commissions—so Garrison told me—amounted to a hundred and forty dollars, and this month he's liable to do even better. What's more, according to Garrison, the old scout likes the work and isn't ashamed of it. So what do you know about that?"

As Morgan paused, Olcott asked the question which from the first of this recital had been shaping itself in the back part of his head:

"The other sister—what became of her?" He tried to put a casual tone into his inquiry.

"You mean Miss Harriet? Well, say, in her case the transformation was almost as great as it was in her brother's. She came right out of her shell, too—in fact, she seemed downright glad of a chance to come out of it and quit being a recluse. She let it be noised about that she was in the market for any work that she could do, and a lot of people who felt sorry for her, including Mayor McGlynn, who's a pretty good chap, interested themselves in her behalf. Right off, the school board appointed her a substitute teacher in one of the lower grammar grades at the Hawthorne School, out here on West Frobisher Street. She didn't lose any time in delivering the goods either. Say, there must have been mighty good blood in that family, once it got a real chance to circulate. The kiddies in her classes all liked her from the start, and the other teachers and the principal liked her, too, and when the fall term begins in October she goes on as a regular.

"On top of that, when she'd got a little color in her cheeks and had frizzed her hair out round her face, and when she'd used up her first month's pay in buying herself some good black clothes, it dawned on the town all of a sudden that she was a mighty good-looking, bright, sweet little woman instead of a dowdy, sour old maid. They say she never had a sweetheart before in her life—that no man ever had looked at her the second time; at least that's the current gossip. Be that as it may, she can't complain on that score any more, even if she is still in mourning for her sister."

"How do you know all this?" demanded Olcott suspiciously. "Are you paying her attentions yourself?"

"Who, me? Lord, man, no! I'm merely an innocent bystander. You see, we live at the same boarding house, take our meals at the same table in fact, and I get a chance to see what's going on. She came there to board—it's Mrs. Gale's house—as soon as she moved out of the historic but mildewed homestead, which was about a month after the night of the storm. The New Diamond Auto Company—that's a concern formed since you left—bought the property and tore down the old house, after blasting the stump of the family tree out of the ground with giant powder; they're putting up their assembling plant on the site. After the mortgage was satisfied and the back taxes had been paid up, there was mighty little left for the two heirs; but about that time Miss Harriet got her job of teaching and she came to Mrs. Gale's to live, and that's where I first met her. Two or three spry young fellows round town are calling on her in the evenings—nearly every night there's some fellow in the parlor, all spruced up and highly perfumed, waiting to see her—not to mention one or two of the unmarried men boarders."

"Morgan," said Olcott briskly, "do me a favor! Take me along with you to dinner to-night at your boarding place, will you?"

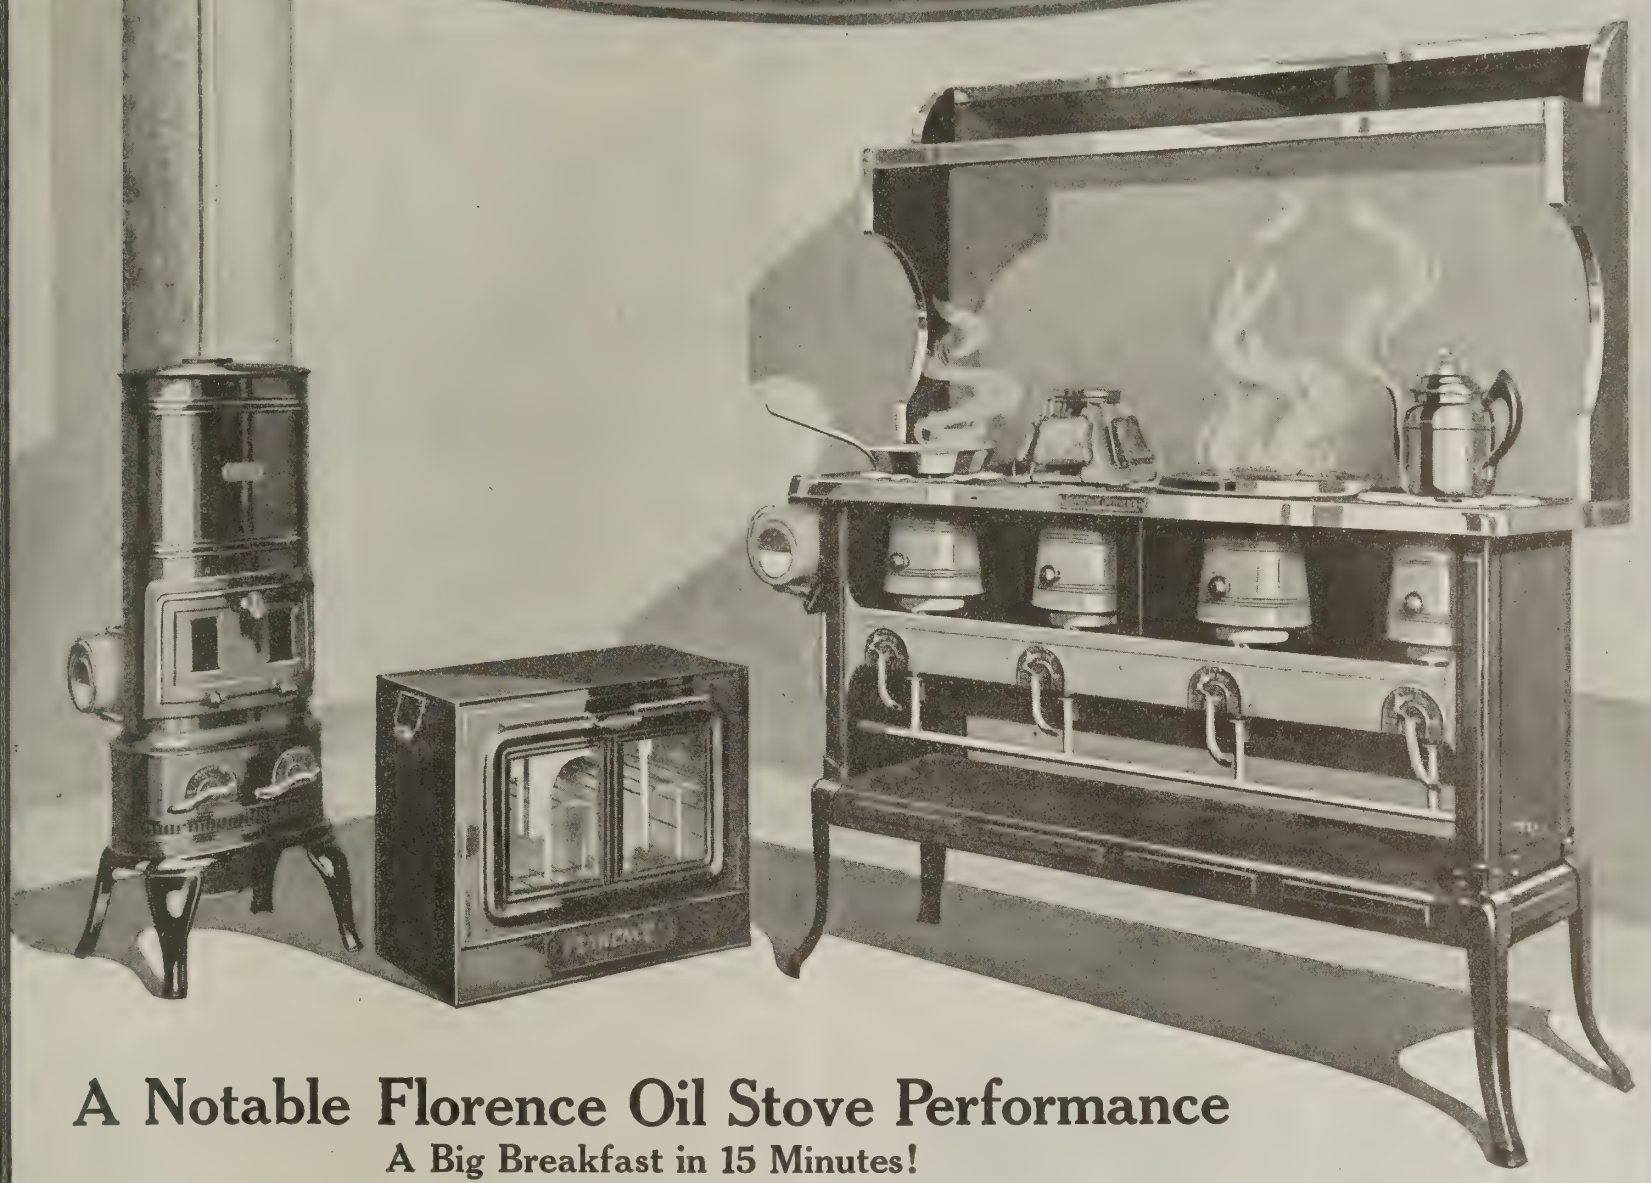
"Tired of hotels, eh?" asked Morgan. "Well, Mrs. Gale has good home cooking and I'd be glad to have you come."

"That's it," said Olcott; "I'm tired of hotel life."

"You're on," said Morgan.

"Yes," said Olcott, "I am—but you're not on—at least not yet." But Morgan didn't hear that, because Olcott said it to himself.

FLORENCE
OIL COOK STOVES



A Notable Florence Oil Stove Performance

A Big Breakfast in 15 Minutes!

Light a match, turn a lever—your fire is ready. Smell the bacon sizzling, see the pancakes turn golden brown—yet a moment or two ago your stove was stone cold. The intense blue flame of this wonderful Florence Automatic Oil Stove means a whole breakfast ready to eat in fifteen minutes.

Yet this powerful heat is most economical—cheaper than coal or gas! Just common kerosene oil mixed with oxygen of the air, producing the hottest kind of a flame, and right up near the cooking so you get its full benefit. But when you want merely simmering heat, a turn of the lever and you have it.

With safety is combined cleanliness, ease of handling (no wicks, no valves—just a lever) and the highest efficiency oil can give. And a "Florence" is so sturdily constructed that it is good for many years.

The **Florence Water Heater** gives you hot water supply for kitchen or bath in a very short time.

The **Florence Portable Oven** has special merits and features which you should know about.

The Pathé Sapphire Ball Playing a Pathé Record. (Picture very much enlarged.)

What is the Pathé Sapphire Ball?

The smooth, polished Pathé Sapphire Ball, which is used to play Pathé Disc Records, does not rip, dig into, or cut the surface of the record.

It is a smooth ball-shaped genuine sapphire used in place of a metal needle. Repeatedly have single Pathé records been played a thousand times or more without wearing out either the sapphire or the record.

Furthermore, the Pathé Sapphire Ball, because it fits the grooves in the record closely at all points of contact, brings out ALL the music from the record. Even the softest, most delicate "tone shadings" are faithfully reproduced.

Finally, the Pathé Sapphire Ball is *permanent.* You are not changing needles every time you play a record.

INVESTIGATE!

Even if the Pathé Sapphire Ball were the *only* point of superiority about the Pathephone, isn't it enough to induce you to look into the Pathé Proposition?

But there is also the wonderful Pathé Library of Records which brings to those who are tired of the regulation type of records, uniquely beautiful musical novelties. It brings you not only records by great artists known to the American public, but Europe's famous favorites as well.

Hear records by Lucien Muratore, greatest of all lyric tenors; Jacques Thibaud, master violinist; Claudia Muzio, reigning success of the Metropolitan Opera season, now making her first records; Adamo Didur, popular Metropolitan Opera basso, and hundreds of other American and European celebrities, many of whom you have never heard before. Records of unique Hungarian and Sardinian orchestras, gypsy violinists, and a whole new world of delightful foreign musical novelties.

Remember too that the Pathephone not only plays Pathé records, but also plays beautifully *every other kind of disc record.*

Therefore we say: Before you invest in any talking machine or phonograph, *hear the Pathephone.* There is a dealer near you who will demonstrate it. If you don't know where, we will tell you. Write us. Write now.

New Pathé Records for April

STRIKING NUMBERS BY OPERATIC ARTISTS

THIS month's list holds a treat in store for the many lovers of Lucien Muratore's golden tenor voice. For Muratore has sung the spirited "Halte-là" from Carmen. This is coupled with a charming French waltz song. Two striking numbers by distinguished foreign artists are also among the novelties offered. And the limpid voice of the young American coloratura, Grace Hoffman, is heard to great advantage in the favorite "Bell Song" from Lakmé, as well as the florid little Dell 'Acqua "Chanson Provençale."

LUCIEN MURATORE, Tenor, Chicago Opera
Carmen (Bizet) "Halte-là" (Halt there!) Sung in French, Orchestra Acc.
Tu ne sauras jamais! (Millandy) Sung in French, Orchestra Acc.
No. 63003. Size 29 c/m (about 12 in.) Price $3.00

GRACE HOFFMAN, American Soprano
Lakmé (Delibes) "Bell Song," Sung in French, Orchestra Acc.
Chanson Provençale (Dell 'Acqua) Sung in French, Orchestra Acc.
No. 52016. Size 29 c/m (about 12 in.) Price $1.50

MM. ALBERS, VAGUET and POUMAYRAC, Famous French Artists
Agnus Dei (Bizet) Sung by **M. Albers and M. Vaguet,** Orchestra Accompaniment
Le Crucifix (Fauré) Sung by **M. Albers and M. De Poumayrac,** Orchestra Accompaniment
No. 62028. Size 29 c/m (about 12 in.) Price $2.50

A FAVORITE QUARTETTE IN FAVORITE SONGS
A Perfect Day (Carrie Jacobs Bond) **Tempo Male Quartette,** Unaccompanied
Good Night (Dudley Buck) **Tempo Male Quartette,** Unaccompanied
No. 40051. Size 29 c/m (about 12 in.) Price $1.00

STANDARD TENOR SELECTIONS
The Maid Of Manaar (Coverly) **John Bardsley, Tenor,** Orchestra Accompaniment
I Loved You More Than I Knew (Ketelby) **John Bardsley, Tenor,** Orchestra Accompaniment
No. 35105. Size 29 c/m (about 12 in.) Price 85c

NEWEST PATHÉ INSTRUMENTAL NOVELTIES

We call special attention to the *organ solos* offered this month. Difficult to record as the organ is, we have succeeded in reproducing not only the complete character of the instrument, but its subtle tone shadings. Be sure to hear this record. Interesting orchestra and band numbers and an instrumental trio are also included.

Halleluia (Handel) Organ Solo, **Jean Guillmant**
Nocturne (Goss-Custard) Organ Solo, **Goss-Custard**
No. 35104. Size 29 c/m (about 12 in.) Price 85c

Light Cavalry Overture, Part I (Von Suppé) **Pathé Orchestra**
Light Cavalry Overture, Part II (Von Suppé) **Pathé Orchestra**
No. 35101. Size 29 c/m (about 12 in.) Price 85c

The Heart's Whisper (Anon) Waltz, **Pathé Military Band**
Lezginka (Anon) Russian Dance, **Pathé Military Band**
No. 35102. Size 29 c/m (about 12 in.) Price 85c

Regrets (Wade) Waltz, **Imperial Symphony Orchestra**
Have You Forgotten (Ring) Waltz, **Imperial Symphony Orchestra**
No. 40063. Size 29 c/m (about 12 in.) Price $1.00

National Emblem March (Bogley) **H. M. Scots Guards Band**
Cavalleria Rusticana (Mascagni) "Intermezzo," **Pathé Symphony Orchestra**
No. 35098. Size 29 c/m (about 12 in.) Price 85c

Simple Aveu (Thomé) Violin, Cello and Harp, **Ackroyd Trio**
Tannhauser (Wagner) "O Star of Eve," Cello Solo, **C. Warwick Evans,** Orchestra Acc.
No. 40064. Size 29 c/m (about 12 in.) Price $1.00

CHRISTIAN SCIENCE HYMNS
That Sweet Story Of Old (West) **Henry A. Mix, Tenor,** Organ Accompaniment
Why Is Thy Faith, O Child Of God, So Small? (Sherwin) **Henry A. Mix, Tenor,** Organ Acc.
No. 20077. Size 27 c/m (about 10½ in.) Price 75c

A NOVEL WHISTLING RECORD
Le Canari (Polackey) Whistling Duet, **Wills and Lawrence,** Orchestra Accompaniment
Havana (Palert) Waltz, Whistling Solo, **Guido Gialdini**
No. 35103. Size 29 c/m (about 12 in.) Price 85c

TWO NEW HAWAIIAN NOVELTIES
Hawaiian Hula Medley (Hawaiian Fox Trot) **Louise and Ferera Hawaiian Troupe**
He Lei Kaiulani (A Wreath for Princess Kaiulani) Waltz, **Louise and Ferera Hawaiian Troupe**
No. 20102. Size 27 c/m (about 10½ in.) Price 75c

THE MONTH'S POPULAR VOCAL HITS
Keep Your Eye On The Girlie You Love (Gerber, Johnson and Schuster) **Ruth Roye, Soprano,** Orchestra Acc.
Drip, Drip, Drip Went The Waterfall (MacDonald and Carroll) **Joe Remington, Baritone** Orchestra Acc.
No. 20136. Size 27 c/m (about 10½ in.) Price 75c

The Trail To Sunset Valley (Gilbert and Muir) Duet, **Campbell and Burr,** Orchestra Acc.
Inari (Vivian Burnett) (Japanese Song) **Joseph Phillips, Baritone,** Orchestra Acc.
No. 20138. Size 27 c/m (about 10½ in.) Price 75c

Watermelon Moon (Frost) Duet, **Campbell and Burr,** Orchestra Accompaniment
Waiting At The Old Church Door (Tony Jackson) **Henry Burr, Tenor,** Orchestra Acc.
No. 20096. Size 27 c/m (about 10½ in.) Price 75c

On The Road To Paradise (Brennan and Ball) **Joan Roger, Contralto,** Pathé Salon Orchestra Accompaniment
In The Garden Of Romance (Reynolds and Kalman) **Gordon MacHughes, Baritone,** Orchestra Accompaniment
No. 20089. Size 27 c/m (about 10½ in.) Price 75c

NEW DANCE RECORDS THAT ARE STRIKINGLY PATHÉ
Mammy's Little Coal Black Rose (Whiting) Fox Trot, **Mata's Blue and White Marimba Band**

THE CHECHAKO WIFE

(Continued from Page 21)

Mrs. Brent had given Tom a very extra special session; and, to Linus' loyal defense that there was a lady of fine principles, McGrath said she made him tired—a chechako woman always began to make over a camp that had done nicely before it ever heard of her. Tom smiled as he offered Eve moose chops at supper, but she declined overtures and angrily pushed the platter across the oilcloth.

"See here, if we was wastin' meat like a Montana elk-teeth hunter, you could land on us, girlie; but when it's all brought to camp and even the bones boiled up—fat tried out for grease too—you better just eat your grub an' be glad old Sureshot kin go git more for you," contended Bill, visiting the brown tent, where Tom and Eve sat silently. "Use your brains!"

Eve suddenly began weeping. Tom rumpled his fuzzy whitish hair, dismally regarding her; but Bill resolutely talked on until Tom exclaimed:

"Quit, can't you? And don't sit there and laugh—it's mighty real to her!"

"What'll I do—cry with her?" demanded Bill. "She's only cryin' 'cause we won't give in to her."

"I am not!" said Eve, conquering her tears to look at him. "But the law ——"

"We're going to get beef as soon as a passenger ship with cold storage will bring it from Seattle," said Tom. "I tried to contract for some on Kadiak, but the brown bears have gone after those herds till there's none to spare. Would you rather go Outside, and come back when we get things better shaped up?"

"No; she wouldn't," said Bill. "Let her stick home in camp an' learn to bend when she's gotta; an' pretty soon we'll build her a shack an' put in a sink, so the plates kin be swabbed off, an' she can set in the window watchin' the big buckets bringin' ore down an aërial tram an' dumpin' right into ships' hatches."

"Us two had to live on candle fish all one winter when the ammunition was gone; and so was everything else! I guess a little meat's coming to most everybody here if they can get it," said Tom.

"I'll never, never eat unlawful meat!" sighed Eve.

She began to use only soaked salted salmon bellies, and to appease the gnawings of appetite tried more sourdough hot cakes, corn-meal mush and rice than formerly, and was soon horrified to feel a constant inner hotness and to view a spotted face. The dried fruit was gone. Another shipment, with vegetables, waited on the dock at the port of Kodiak, far eastward on Kadiak Island; but, though the sun shone brilliantly from azure skies, wolf winds blew from Cook Inlet into the Strait. Eve became hysterical when Tom wanted to try to send the launch through the turbulent flood to get food that his wife could successfully eat. Linus had planted a garden for her, and Mickey cooked young fireweed and fern tops, those succulent greens of the North; but Eve looked hungrily at the fresh steaks and savory roasts that the rest daily gobbled.

"No; I will not 'try a little ptarmigan'—that's out of season too," she pettishly said of a plucked and dressed offering of birds humbly presented by Bill.

She now looked upon Tom as a sorrowing mother at a loved and wayward child. She would labor over mining costs and typewriter until, depressed and headachy, she got up and into rubber boots that would take her dry-footed through the vivid green tundra of the great flat back of the beach. Wild hyacinths were fragrant white spires among the green; and, gathering them, breathing that clean vivifying air with the feel of the whole spacious Northland in it, she relaxed. Resentment left her under the influence of a picture peaceful and vast, and she yearned to be wholly happy in this little camp of a few human creatures, dwelling on the rim of the wilderness.

She thought warmly of Tom and Bill and the men, and always reached home energetic and smiling. It was after one of these trips that she found a can of black paint, and, toiling with Mickey's kindling ax, wrecked milk boxes until she had material enough to make signs for various doors, reading "Throw All Waste in This Box and Make a Neat Camp." She set the boxes in place and waited. Linus, Bede Moore and Pop at once made deposits; but McGrath dug under bunks and swept thoroughly, next strewing papers, discarded rubber boots, overalls and tobacco cans on the beach above high-tide mark.

"Hey! The leddy vants order on dis beach, an' dose goes in der boxes!" shouted Linus, discovering Mac, who retorted:

"You must be the new chief of police! Well, stop me throwin' stuff where I feel like! Does she think us guys are slaves? You stop me, will you?"

He was a black excitable Irishman, and Linus had all the red passion of the Swedes; so they were rocking like two vicious bears when Tom came by. McGrath was whipped before Linus would let go, and Tom had a wrenched wrist from ripping them apart before the Swede could set more marks on Mac. Eve sadly removed signs and boxes, informing McGrath that neatness wouldn't have hurt him.

"Excuse me, but you ain't my boss," he said hotly. "Buttin' in on a workman's rights! Eternal law'n order, world without end—do I come bustin' in when you're runnin' over to the cookhouse for one of them pots o' tea you're f'rever drinkin', tellin' you to lay off it before you git the shakes proper? Oh, I'm married personally; an' she's like you, hittin' the teapot an' runnin' other people's games for 'em!"

"Why, how—how dare ——" Eve stopped; and as he eagerly made ready for verbal battle she astonished him with "You're right, Mac; I do drink too much tea. And I'll take less. You see, I've been rather nervous, all round, with the moose flies and typing things with my head in a black fly net. And they go up my sleeves too."

"You play that old machine too much," said Mac in a calmer tone. "The bugs are fierce; an' you're not a strong woman, or uset to this. Keep to walkin' out an' pickin' the flowers."

They began to like each other; and Eve reformed conscientiously as to tea, and expected Mac at once to gather the refuse and at least drop it where the tide would clean the beach. The old boots lay untouched until Linus mutteringly did the chore, and Mac did not change a single slovenly habit; but he found the first wild roses for her, and said she was to mail all of his first check to his wife, who also meant well, in her way. Snuff in the stores had puzzled Eve, until the Russians and Finns came to have many ounces charged against their wages, wadding the powder under mustached lips as they strode off. To Nils Lindquist, Eve gently said that was such a degrading habit, and wouldn't he promise, like a nice good boy, to stop? Nils mashed a gnat against a shiny red brow, and after reflection resumed his head net, and answered:

"No, ma'am. Her's a free country, here."

Stepan Gagoff listened sullenly while she pleaded; and, evading her without impolite reply, because a bookkeeper pays off and a manager's wife has fearsome possibilities, he ran to his bunk and made up his bed roll, crying to the Serbian Nicks and Mikes that if one but came to Niklik to be beneath another czar, then let them give him a time check that night! Tom had to talk fast and promise unlimited snuff before the agitated Stepan hung his ikon over his bunk and went to work.

"Say, we'll soon be workin' three shifts here—one comin', one goin', and maybe one in the mine!" said Bill; and Tom looked rueful as Eve said:

"These people resist every effort toward civilization."

"By golly, I believe you are a percissy after all! Can't you live-an'-let-live a little?" Bill joked. "Poor Linus is 'most ready to come back to the hot bunkhouse, after gittin' his tent up so's he can live alone an' not have the poker game keepin' him awake—don't dare touch anything after he's cleaned up, for fear Eve'll come visitin' an' see he ain't neat."

"She just gets sick stewing over things that are all right," said Tom.

"She's got the makin's of a good fella—just the makin's," said Bill, winking before he gave his pony laugh. "Sore at me, Eve?"

But Eve would not fight him. It was one of her droopy days, and she refused to go to the messhouse for dinner, requesting Tom to bring some bread and butter.

"That ain't enough, hon; and I'm going to take the launch to-night and get you some eggs and beef, or some darned thing to

It's Not Just "Paint"—it's STONE-TEX

You can't paint brick, stone, concrete or stucco buildings with ordinary paint—and expect the most satisfactory results. A special coating is needed.

STONE-TEX is prepared specifically for masonry surfaces. It gives the walls a **beautiful, uniform, soft-toned finish,** and at the same time renders them **dampproof—rainproof — weatherproof.**

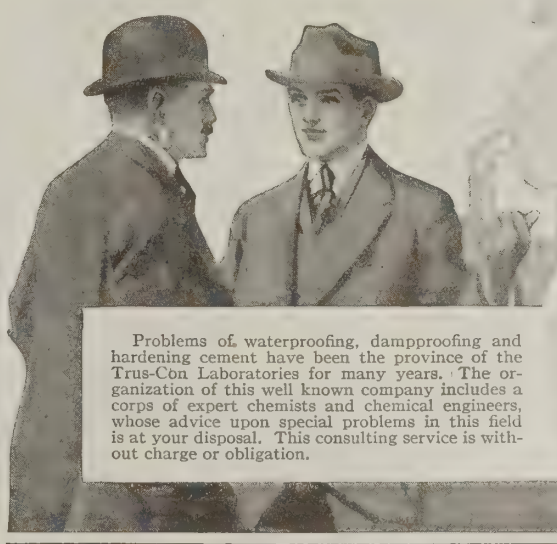
All masonry surfaces, such as brick, stone, concrete and stucco, are more or less porous. Rain, melting snow, sleet, dew—are absorbed into the pores, causing a damp condition. The dampness, mingling with the dust from the streets, produces those unsightly streaks and spots that disfigure the building.

Ordinary paints, being intended for wood, offer little resistance to moisture, when used on masonry, and soon crack, chip or peel off. STONE-TEX, which is a liquid cement coating, enters deep into the pores, fills all hair cracks and makes the walls hard as flint. Because of its dampproofness, it outlasts ordinary paints, retaining its beautiful, even finish for years. Suitable for new or old walls and furnished in a variety of pleasing colors.

If your brick, stucco, concrete or stone building is disfigured, or damp and unsanitary, have it "Stone-Textured" at once.

Write for Stone-Tex Booklet, giving full details, colors, etc.

THE TRUS-CON LABORATORIES
101 Trus-Con Bldg. Detroit, Mich.



Problems of waterproofing, dampproofing and hardening cement have been the province of the Trus-Con Laboratories for many years. The organization of this well known company includes a corps of expert chemists and chemical engineers, whose advice upon special problems in this field is at your disposal. This consulting service is without charge or obligation.

The Twelve-Month-a-Year Kitchen Range

IF YOU use a wood or coal range it makes your kitchen too hot in the Summer; if you use a gas or oil stove, it doesn't keep your kitchen warm in the Winter. Two ranges are a waste of money, for the DUPLEX ALCAZAR gives you two kitchen ranges in one.

¶ It is made in two types: one burns wood or coal and gas; the other uses wood or coal and oil. No changes necessary to use the different fuels singly or in combination. The DUPLEX ALCAZAR is always ready to do its part in cutting fuel costs, bettering cooking results and keeping your kitchen comfortable the year 'round.

THE DUPLEX ALCAZAR
TWO RANGES IN ONE

¶ The variety of styles in which the DUPLEX ALCAZAR is furnished is great enough to fit every conceivable condition and need. It is made in steel, cast iron and porcelain construction.

¶ The best dealer in your city is displaying this wonderful range in styles especially suited to the needs of your section. If you write us direct, mention whether you are interested in the Gas or Oil type.

MÜLHENS & KROPFF, Dept. 24, 25 West 45th Street, New York

help you—wind's changing, anyhow; and I believe the summer calm's going to begin."

"Oh, I'm so worried! You're sure the doctor will come back with you?"

"You bet he will, dearie! Doc Baughman's mushed many a hundred miles to a patient; and he's there right now, waiting for the launch so he can get to my little girl," said Tom tenderly. "And Bill's here to take care of you."

"He hates me," said Eve miserably. "They all hate me!"

"Who, Bill? He thinks a heap of you, and so do the boys. They know you don't understand the country. It's a fine land, hon, when you know it; but you're all shot to pieces, baby—pretty soon it'll be all right, and we'll plane the mean places down."

"Hurry! Hurry home, Tommy," Eve whispered, hanging to him. "I've stopped the office work; and it'll be so lonesome. But I can go and see Linus—he's off nights since last change day."

"I'd leave the old sport alone for a day or so, dearie. He didn't show up this morning, and Mac saw a native's bidarka up the beach—Linus must have got some hootch from him; and when that Swede starts drinking we just have to leave him alone, you know, and finish it—thinking about the woman, you see."

The waves smoothed until the screeching of gulls was the biggest sound in the summer stillness. After supper Tom took the mail bag and rowed with a native helper to the launch. The engine coughed uncertainly, then steadied; and Eve sat in the brown tent's doorway, waving as the launch disappeared round the high reef. Westward, toward the Arctic, the mist-hung peaks of Popof Island showed. Across the wide Strait sunlight flowed down austere white hills. The Niklik side was darkened by shadowing Mount Niklik, but the sun gleamed on the water, flashing on thronging king salmon that leaped in the bay, trying to rid their shining skins of parasites. Mickey was rowing a dory through them, taking in a net thickly hung with big fishes.

Eve rose, pulled a parka of reindeer-fawn skins about herself, and moved slowly through crowding gnats along the beach. She waved at Mickey, now rowing ashore, and smiled at a few men of the day shift who were leather-soling rubber boots or pitching rope quoits before the bunkhouse.

"Ain't goin' over to Linus' tent? He won't lay off the hootch till he's got a-plenty, Mis' Brent," called McGrath.

"If I talk to him I hope he will," said Eve; and with languid pace she took the trail, through tall beach grass and wild celery, toward the remote spot where Linus had decided to bunk alone.

"Who in time's shootin' so close to camp? Is he daffy?" exclaimed McGrath as a heavy-caliber rifle shot sounded. "He—— Listen! Come on, boys! Hear that?"

Another shot, and a woman's desperate scream. McGrath darted inside, tumbled out with his rifle, and ran. The cook rolled a stone on the dory's painter; and, snatching an ax from his wood tent, his long legs took the trail.

"Help! Mac! Bede! Help! Help!" Eve screamed; and Mac roared: "We're comin'! Run this way; we'll git you!"

The men plunged into a jungle of salmonberry and alder as she wailed:

"Help! Hurry, Mac! He's killing—he—— Let him go, you fiend! Let him go, I tell you. I—let—give me that knife! I'll make you; I'll make—— Help!"

Her anguished voice rustled into silence; the big lean cook swung his ax and cursed as he passed shorter McGrath and lit in the cleared space before Linus' tent. Eve was clutching a stoutish gray-haired man, who wabbled so that Mickey Dugan thought it was he who had been hit. Panting, she hurled an opened jackknife into the brush; and with a wild look she gasped:

"He's murdered Linus! I—I saw it! Hold him—oh, Mickey!"

"Git the girl out o' this," said McGrath; and with a snarl he pounced upon her captive as Mickey with a reluctant backward look rushed her down the trail.

Linus Larsen, half out of the tent, from which gushed a hot stench of stale whisky and the acrid sharpness of gunpowder, was flat on his face, grunting weakly. Blood from a hole in his head sopped his yellow hair and, propped against Bede Moore's knee, a knife gash in his breast spurted redly.

"Helga! Two year to-day he stole—stole—vife," he moaned. "Daly!"

"He took that guy for Daly," said somebody.

"He's Daly," panted Linus painfully. "Stole vife—poke—nine black—foxes, vorth——" His eyes finished it, and young Bede said gently:

"Linus, ol' kid, us all wants yo' to tell fo' suah is this guy who done fo' yo' Doc Daly, from the Inside? Nod yo' haid, boy, fo' yes."

Linus nodded violently—and died.

"Frisk him for a gat," said McGrath, driving a hand under the wabbly prisoner's dirty tan canvas coat. "Nothin' in the pants? Here's a leather case."

"No, no—mustn't touch," said the wabbly one sleepily. "No, no—naughty!"

"We ought to bump this bird off now an' done with it," said McGrath savagely, and excited young Bede cried that was the stuff!

"Killed Linus; an', befo' that, spoiled his life, an' likely throwed the woman to the lions!" he said with a sob. "I'll yank the rope on him!"

"No, no, no!" said the prisoner, yawning as he reeled forward under the prods of his captors. "Set upon, gentlemen—very, very sleepy now—grub first, though—no grub, three days, I think. Don't pinch like that, dear chap—brutish, rather, your clutch."

McGrath fiercely swore at him, and the prisoner turned a white, fattish whiskery face about, observing:

"Dear, dear, dear—but a poor musher in sad case needs grub, boys—lost pack—glacial flood—wandered—skunk-cabbage roots and ferns, boys—heard blasting, this morning, I fancy it was. Nice reception this, to lost man!"

"No; keep back, Bede, I been thinkin' we won't hold a miners' meetin', though we could, bein' isolated; an' sentence'd go," said McGrath, warning Bede's menacing hands away from the prisoner. "The Floatin' Court ought to be by here, goin' to the westward; an' they got marshals, judge, lawyers an' all aboard, to clean up the winter cases in these coast camps. He kin git his quick if we flag the revenue cutter when she's passin'."

"Good notion, Mac," decided old Pop Paley. "More legal too."

"Say, we'll be legal enough to tickle Mis' Brent," said Mac as he kicked the stranger into the cookhouse. "Sit on that stool an' eat, then, you rat! Though we ought to let you starve! Got some cold chuck, anybody? Huh?"

"Coffee," sighed the captive, resting on the long table. "Hot, black, strong! Larsen died—didn't he, my friend?"

The men stared at each other as he smiled drowsily upon them; and Bill Dixon, summoned from the mine, where he had gone to start the night shift, came in as, answering a demand from Bede, the prisoner said:

"Daly? Oh, yes; that's my name. But about coffee, boys?"

"I remember him from Cleary Creek," Bill said. "It's Daly."

"Well, Mis' Brent herself glommed him. Talk about a game girl!" said McGrath proudly. "We'll suit her book for once, you bet; an', with her ideas an' her witness of it all, he'd have a swell chance not to swing!"

Pop Paley had started a fire, and the savor of boiling coffee made Daly sniff avidly. As he sank his white unhealthy face into a pint cup of hot liquid the roomful discussed the case: was it only manslaughter when the deed was not premeditated?

"Say, fellas; Eve'll have all that dope. She used to type all her pa's briefs, an' she's a sharp on law," said Bill.

"Pretty fine we got a woman like her that goes hungry rather'n be illegal—an' her the witness!" exulted McGrath. "This here's murder; sure it is."

"Now the Floatin' Court might be a month to the west," said old Pop, gazing over his spectacles at the unconcerned Daly. "When Tom comes with the launch we'll send this man to the Kodiak jail."

"Guardin' him meantime—all right!" agreed McGrath; and the rest nodded.

Daly finished his food and sprawled limply on the table, blinking at them while one hand pawed toward the leather case that was in his dirty coat. He fumbled at the spring as, from the door, Mickey cried shrilly:

"Anny man here married? Mis' Brent's baby's goin' to be born!"

Bill started up; then flushed and glared hopelessly about, while McGrath faltered:

Automobile Starting & Lighting Battery

DON'T be content to take anyone's "say so" about the starting battery for your car. Get out your investigating glass and look them all over. You will not need the eye of an engineer to see why an "Exide" costs most to make but least to use.

Take as one instance its unit cell assembly (1), each cell a separate sealed unit. This makes it easy to remove a cell.

The non-flooding filling plugs (2) prevent overfilling.

The jars (3) are made of a special tough, semi-flexible compound.

Its sturdy case (4) is built to "hold together."

Extra large plates (5) and in consequence an extra-powerful battery.

Its handles are sunk into the case (6) and permanently held there by anchors of solid metal; no bolts, screws or nuts are used in these handles.

The above are some of the salient features of the "Exide" Starting and Lighting Battery—it has others.

But, most important fact of all, it has built into it the knowledge, the experience and the ideals of the oldest and largest maker of storage batteries in this country, the company that for twenty-nine years has carried Quality Prestige throughout the storage battery world.

Batteries manufactured by this Company are used:

- In a majority of the U. S. Submarines
- For Gun Firing and Wireless by the U. S. Navy
- Almost exclusively by Large Central Lighting and Power Companies
- The Telephone, Marconi Wireless and Western Union Companies
- For Electric Vehicles, Mine Locomotives, Battery Street Cars, Railway Signals, Etc.
- In thousands of House Lighting Plants

Outstanding! In every community the name CERTAIN-TEED stands conspicuously for quality, good value, satisfaction and fair dealing.

Certain-teed

Paints and Varnishes

get their quality from the character of the materials used in their manufacture, and from the exactness with which they are mixed.

The formula of ingredients printed on the label shows honestly and unmistakably the real worth of the paint.

Modern up-to-date machinery eliminates the uncertainties of mixing by hand, and insures absolute conformity to the experts' printed formula.

The price of CERTAIN-TEED Paints and Varnishes is based on the most favorable manufacturing, distributing and selling costs, plus a margin of profit smaller than is generally customary. This low price would not be possible if we had to depend upon an exclusive paint organization to distribute and market our paints and varnishes.

CERTAIN-TEED Paints and Varnishes are guaranteed to give satisfaction. This guarantee is backed by the enormous resources of the Certain-teed Products Corporation.

Whether you do your own painting or employ a professional painter, your interests will be best served if you insist upon getting Certain-teed Paints and Varnishes.

Any good dealer can sell you Certain-teed Paints and Varnishes. If he does not carry them in stock he can get them for you.

Certain-teed Roofing

For factories, office buildings, farm buildings, garages, etc., Certain-teed is the efficient roof. It costs less to buy, less to lay and less per year of life. It is light-weight, clean, sanitary, weatherproof and fire-retardant. For residences Certain-teed Slate Surfaced Shingles have all the advantages of Certain-teed Roll Roofing, plus artistic beauty.

Certain-teed is guaranteed for 5, 10 or 15 years, according to thickness (1, 2 or 3 ply).

If you are building or need a new roof, it will pay you to investigate Certain-teed before deciding upon any type of roof. Sold by leading dealers all over the world.

"But I ain't got no kids, Mickey—rest of the mob's all single. Will I row to the native fish camp an' see if there's a squaw could be got?"

"Natives don't give no help; they just let 'em suffer," said a voice.

"'Tis thir-rty miles there an' back, anny-way," said Mickey, heaving. "She must have help right here, min. Do we want Tom comin' home to no wife because his min did nothin' to aid?"

"I'll do sumpin'," said Bill, pale and stricken. "Can—can she speak? I d'know how it takes them."

Mickey put up a hand for quiet, and stabbing cries came through the canvas walls. The prisoner set fat fingers on Bede Moore's shrinking shoulder and uncertainly stood, blinking at Bill, as he said:

"Go tell her doctor's coming. Put hot water on the stove."

"Doctor—they called him Doc on the creeks; but he never did any doctorin'," Bill said, advancing. "Daly, don't kid this outfit—were you one?"

"Marine surgeon, once; formerly genteel family practice," said Daly affably.

He shrugged out of his coat, disclosing a nearly fresh white undershirt, a sleeve of which he pushed up with a purr of discontent when it refused to pass a bulge of fat. Bill ripped the sleeve, noting that the man's nails were trimmed and clean, though the skin of his hands was scratched, bitten and cracked.

"Little shot of hop will liven doctor," Daly muttered, and drove in a potent needle from the case. "One wears off, doctor takes another. Ah—good! Bring dish pan, string, blanket, hot water—boil scissors full ten minutes. Got oil?"

"He shan't go to her—want her to be shocked insane, seein' him?" shouted McGrath; but Bill exclaimed:

"Shut up! Just so he savvies doctorin'. You, Daly, march! Take his other arm, Mickey—you other guys git what he told you, fixed ready."

Passing out, Daly reached for Mickey's clean apron, hanging from a wooden peg. Bill urged him toward the brown tent, and the good cook, audibly praying to certain friendly saints, stuck a solid arm under Daly's. The latter smiled uninterestedly at the calm Strait, aglitter in the night sun, and at the misty white hills beyond the water. It had been months since he had really thought. Sensations stirred him briefly, and, passing, left him sodden. He had been wildly drunk when he stumbled from a Lapp camp on the Unalaklik mail trail, after stealing the shaman's two best work dogs, his grub and wolf robes.

The kind Eskimos had been sheltering Daly as thanks for setting a boy's broken wrist. He might have had the loot as a gift, but the impulse came, so he stole. The dogs sneaked away while he lay sucking at a dark bottle, also stolen, and he dozed for days in a caribou wallow, staggering on, finally to lose his insecure pack in a creek that was in flood.

Then he lived on green moss berries and a porcupine slain with a club. At last he saw blue water from the rising slopes. He smelled greedily when he crawled downhill and stopped by the Larsen tent; and giving a joyous hail he went in upon a man glooming at his ghosts.

It was only liquor refused that Daly fought for when he snatched Linus' rifle and opened his own knife—he had long forgotten Helga Larsen. He fired as Eve peered into the tent.

"Help's come, Evie—got a doctor, little girl!" Bill called softly as Daly moved confidently to her door. Eve gave a moan of terror as her tortured eyes sought the man who entered.

"Bill! Not you! Go 'way—oh, wretch!" she gasped.

But Daly did not go. He felt a sudden hot uplifting desire to succor and to save, and he said gently:

"I am skilled and careful. Just think hard that in a few hours you will be well and happy! I have helped lots and lots of little babies into life."

Pop Paley had been breakfast cook, to spell a worn Mickey. The dinner potatoes were boiled to soup and the meat scarce boiled at all; but the lanky cook smirked and grinned so mysteriously that no one complained except to joke:

"Hey! Your bannock's all raw in the center!"

"Thin call ut cr-ream puffs," said Mickey, dropping a mess of rice and raisins with a

A Good Tube Means Lower Tire Costs

An automobile tire is like a human being—it cannot live long without sufficient air.

What suffocation is to a man, underinflation is to a tire, robbing it of strength and effectiveness, crippling its resistance.

A tire serving at insufficient pressure is a tire handicapped from the start. A tube that permits insufficient pressure is a menace and a spendthrift.

We advise all motorists with whom economy is a consideration to use Goodyear Tubes in their tires.

They are tubes built to lower tire costs by affording the casing adequate pressure under all conditions.

They *hold* air—the air that is vital to your casing's very life—and they *keep on holding* it, day in and day out.

They are made up from many paper-thin sheets of fine rubber, laid layer upon layer and vulcanized together into a perfect air-retaining unit.

Their valve-patches are vulcanized *in*, not stuck *on*. They will not leak, seep or creep.

Goodyear Tubes are built *thicker* than is the rule, that they may last longer.

For sustained and severe service we recommend the Heavy Tourist type. It is especially thick, a little higher priced than other tubes—and *better*.

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

thud. "Gwan wid you, Glover! I'm up'n the air, an' who cares? Well, hurroo! He's br-ringin' that dish pan at last!"

Bill Dixon came cautiously into the mess tent, holding a great blanket-draped pan before him; and he set it gingerly upon the table.

"Fellas, there's two of 'em!' he cried. "Evelyn Niklik an' William Thomas Brent. Now then, peek careful—ain't they swell?"

Large shy hands put back corners of the light cover and the men, in turn, engrossedly regarded two small crinkly faces and a fuzz of whitey hair.

"Is it twins just the same when both aren't the same sex?" demanded Glover, the timberer. "An' say, is there plenty of canned cream for the extry one?"

"Why, the maw feeds both, you poor rummy!" said Bill. "An' Doc says she got through fine, too, considerin'—she told me when I went in she couldn't 'a' even tried to live without Daly helpin', boys. Her heart quit on him twice, an' he had us dig up the chloroform that was in the assay office, when he saw it was goin' to be bad. Where would this camp 'a' been without that doctor? We would 'a' been no use!"

"Sure, he was a mother an' ministerin' angel, he was—look at the size of the mitt on this divil!" said Mickey; and while he displayed the tiny hand of a snoozing twin he sent a crafty look at faces that had darkened at the prisoner's name.

"It was him committin' murder drove the girl to her trouble before it was due," said McGrath. "Are you weakenin', Dixon? You know the guy's got to swing."

"I'm huntin' lumbuh to make a cross fo' Linus," said Bede Moore.

"Mis' Brent's the witness; there's the strong point," said McGrath. "We know her principles—follow the law! I'm the night guard."

"Oh, I'm with the gang," said Bill cheerfully; but, leaving the tent, he shuffled his feet noisily in the shale, then stopped, listening anxiously to the talk that began when somebody asked if it wouldn't be safest not to pick Dixon for a guard.

Doc Daly was sleeping, with a stolid Finn as keeper. He was imprisoned in Tom's wood tent, adjacent to the one in which Eve lay quietly gazing through an open door at satiny waters, where the salmon jumped. A wedge of wild white swans flew low, scattering the gulls that screeched and swooped above the fish. Her pet blue jay sweetened its song as it flew in to light on a canful of purple iris, brought by Stepan Gagoff, unregenerate user of snuff.

The light breeze held the smell of the sea when it blew from the Strait; but when a warmer breath came from the tundra flat, back of the camp, the roses and wild hyacinths seemed close. She thought of the black night in which she had come to Niklik; of the mine; and the freighter that was due soon; of her garden that she could not visit for a week—the garden that kind Linus had made. Occasionally a snore made her start. A groan always followed; then a long silence.

"Won't you swally the broth, pettie lamb?" purred Mickey, creeping in with a bowl, from which a pleasant beefiness reached her. "Ah, now; don't mind ould Section Thir-rty whin you're wantin' str-rength to care for the angels, mem."

Eve began to weep into her pillow, repeating:

"No, Mickey; no. Just rice and a very little tea—oh, Mickey!"

"What is ut, pettie? Will I git the good docthor? Bless him!"

"No, no," she said miserably. "He—he's guarded, Mickey?"

"Wid a pair of come-alongs on his wrists too. McGrath had thim in his kick, it seems. I'll set the broth here, annyway; there might come a fancy to dhrink ut."

The bright sun shone on the smooth water and the warm breeze came; but as the day went Eve felt herself in a mental night, where thoughts came foggily. To Kodiak; to justice! And the law would take its proper course. Her hands were clammy as she felt for the precious twins, snug in their padded dish pan—the babies that Daly had saved.

"He killed Linus. I saw him!" she told herself feverishly. "I must reason. I know it's right for them to take him."

Mickey consulted with Bill when she failed to eat the lunch he dressed with flowers and the first salmonberries, and Bill gravely besought her to let him stay close that night. Wouldn't she feel better with the dear twins where Uncle Bill could hear their littlest wail?

"No, Bill; I want—I'll be better by myself. I could call if I'm worse, and the guard could bring in the doctor."

"All right," said Bill heavily. "But I'll be up, girlie."

"Oh, no—go to bed, please. Please!" said Eve queerly.

"All right; I will, then. Just don't worry. Think of the twins."

"Yes, I—oh, I'm thinking," said Eve withlocked fingers. "Thinking—thinking!"

She heard Mac take the Finn's place, and shuddered when the former's voice told somebody there was no danger of his going to sleep, even if he hadn't had any the previous night and had drilled rock all day.

"Tom'll be home to-morrow; an' we'll take no chances on him gittin' loose. He'd never git by me," boasted McGrath.

With William Thomas cuddled at her breast, Eve listened to Daly begging tobacco, and Mac replying that murderers could go without!

The flat cars, loaded with sacked ore, rattled downhill to the beach, and she heard the voices of the trammers shouting. Then the supper shots from the hill—eleven o'clock! The rose of the night sun was setting the tents aflame. She knew the trammers were eating in the blacksmith shop by the main tunnel of the mine. The day shift slept. And suddenly she was aware of a sleeper in the wood tent—steady snoring, unlike the infrequent grunts that Daly made when turning over on a hard wood bunk.

She slipped weakly from bed, a small pathetic figure in her white gown. She had to stay on her knees at first, and then painfully drag herself upright. From the door she could see the interior of the wood tent—and McGrath sat on a box, asleep, while the prisoner stared musingly at him. Shakily Eve's hand found a cup and a bottle. Her brown eyes glowed strangely as she wetted a piece of cotton with the chloroform with which last night the doctor had won for her surcease from agony. He had made her hold it to her nose and breathe. When the cup fell, he said, she would be "under."

Only Daly's sharp black eyes spoke when the white form glided behind tired McGrath and a slim hand advanced the cup. Mac breathed louder in a moment; then the raucous intake ceased and he lumped against the canvas wall.

"The key to these things is in his pocket. O woman, are you a saint, or just all heart?"

Eve was fumbling at the cruel steel cuffs that bit the fat wrists, and abruptly she freed him, whispering:

"It's suppertime and no one is on the beach. There are but two boats in camp; my husband's got the skiff with him. Row one and tow the other—and row west toward that small island. Look—see where I'm pointing? Natives there have an overboard engine and this money'll buy it. Good-by! Good-by!"

"Get into bed; you mustn't stand—I'll carry you," said Daly tensely; but Eve panted: "Don't mind me. Fly, doctor, fly!—and thank you for my babies!"

"They'll never head me in the hills; and I'm going to live better, be a better ——"

"Fly, man! He might come out of it! The boats are kept over there—in the lagoon! Good-by!"

He raced through the shale to the lagoon and, standing on the shore, pulled madly at the anchored dory.

"Hold on! Take the little skiff; you can't make time in the dory, alone," said Bill Dixon, back of him; and to Daly's gulp of fright he said: "It's all right, Doc—them twins are why I'm goin' to bust the bottom out of the dory, while you row for it in the skiff. Go to it!"

Eve was a huddle of white in her doorway when the skiff rode the tidal creek flowing from the lagoon and moved swiftly westward on the flood tide of the sun-reddened Strait. She stared until the black shape of the boat was merged in the deeper red of the distance. Once she tried to inch herself toward the bed, but strength was lacking; so she sat there, weak but starry-eyed.

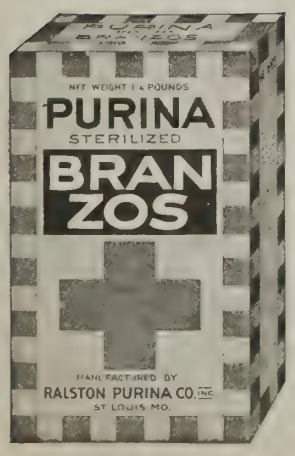
After a long wait she smiled and reached a trembling arm for the bowl of moose broth that Mickey had left upon the bench. Then she drank, and, still smiling, crawled across the tent and slowly got into the bunk. Her hand found the twins, warmly snoozing in their dish pan; and, with a long sigh, she slept.

Children love Ralston Wheat Food

They don't tire of it. Ralston has the rich whole wheat flavor that tastes so good. It encourages a good appetite and supplies the nourishing elements of the whole wheat. Ralston Wheat Food

The natural wheat food with the natural wheat color

Just what a growing child needs to build a strong constitution. It nourishes the body and aids the digestive organs to do their work. Get a package and give the whole family a treat. Very economical. In checkerboard packages, only. 10c and 15c (East of Rockies).



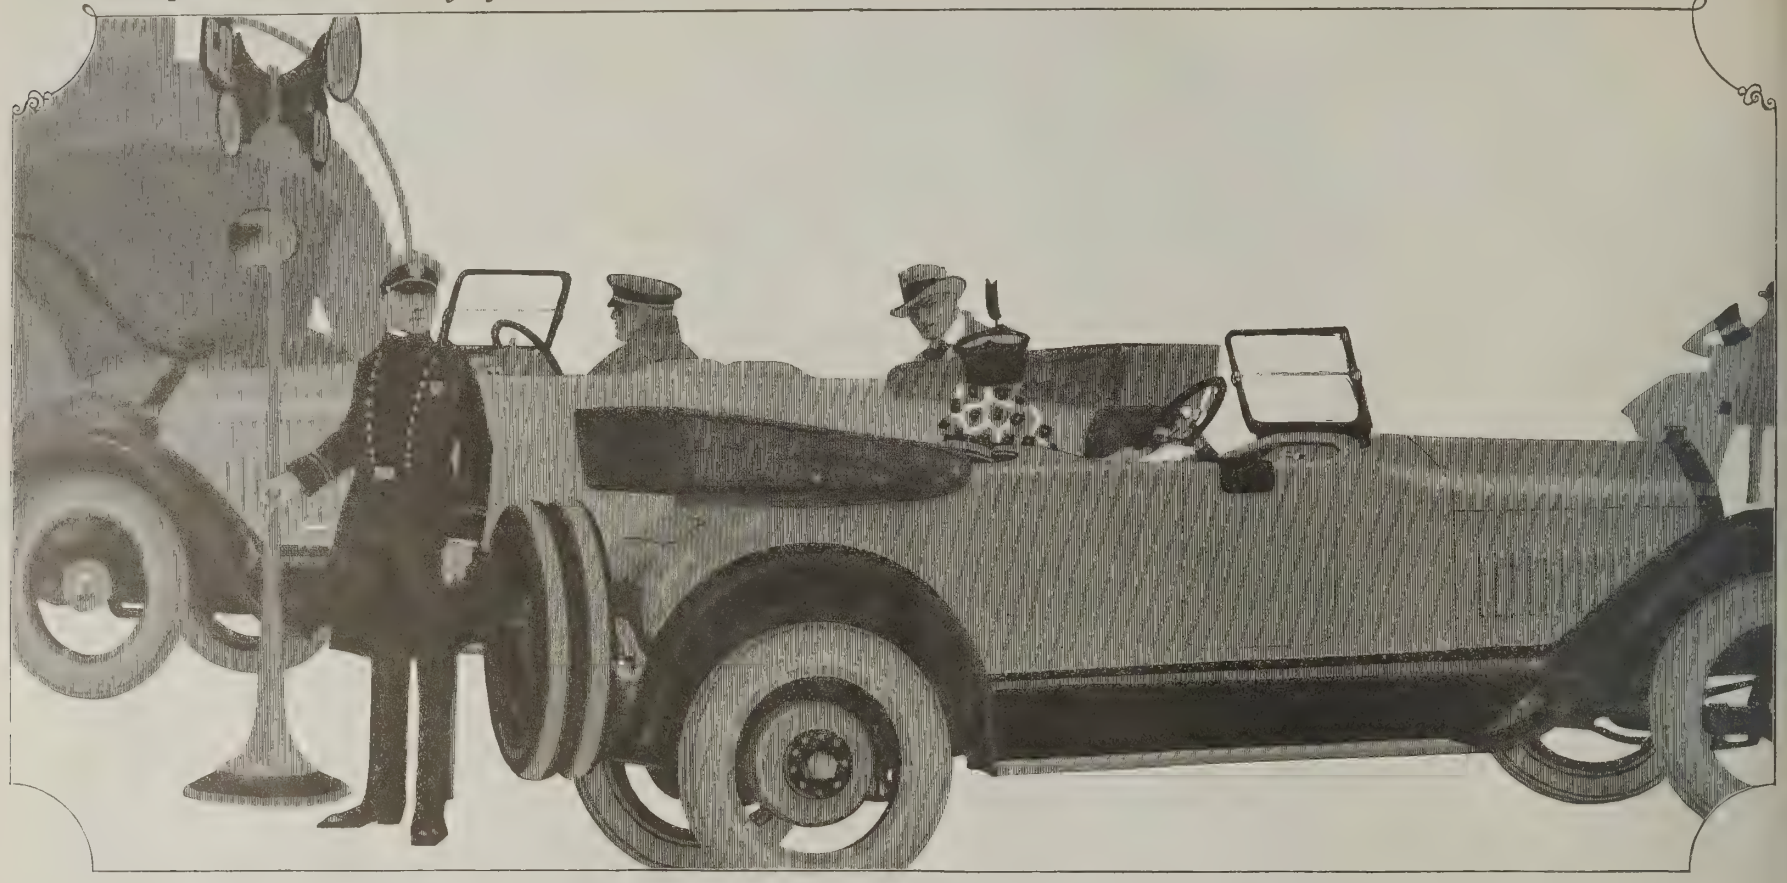
PURINA BRANZOS

Different from ordinary bran, because it is more than bran. Combines all the laxative virtues of the bran coat with the nourishing qualities of the wheat. Makes a delicious cooked porridge. Also wonderful bread and muffins. Get a package today. At your grocer's 15c (East of Rockies). Identify it by the checkerboard package.

If your grocer won't supply you with either Ralston Wheat Food or Purina Branzos, write us.

RALSTON PURINA COMPANY, 876 Gratiot Street, St. Louis, Mo.

"In percussive instancy of pick-up, this car caps the effort for combined obedience and power"



National

HIGHWAY CARS

6 12 CYLINDERS

There is a degree of motor car performance beyond which improvement is at present unpurchasable. That degree is enjoyed to the peak by the owner of a National Highway Twelve. In fluidity of operation, in percussive instancy of pick-up, in sustained and imperious command of every motoring situation, this car caps the effort of the industry for combined obedience and power. Its form and its appointment are of an excellence to match its prowess. Its price falls fair between extravagance and unwise thrift.

The Six $1750
The Twelve $2150

Its counterpart in style, in general structure, in well-powered elegance, is the National Highway Six. An able car—silent, pliant, proficient; perhaps a shade less active than the Twelve. Appreciably less in cost, a car notable in any company, and not to be approximated in quality or efficiency in its price field.

NATIONAL MOTOR CAR & VEHICLE CORPORATION · INDIANAPOLIS

Seventeenth Successful Year

BRINGING OUT BARBARA

(Concluded from Page 23)

to let slip a crucial opportunity, on the ground that "people were looking!" Oh, how trivial, how incorrigibly trivial he was! How right Mrs. Winslow had been!

"Just one turn!" he urged, more and more uncomfortable.

"Certainly," I said, and let him swing me away.

We had not progressed ten feet before Johnny Hargrave cut in. Thus Allan, no doubt to his intense relief, was most opportunely released from an embarrassing situation.

I received two impassioned notes from him during the course of the next morning, begging me to see him at the house; and these having elicited no reply, he followed them in the afternoon with a third, in which he actually suggested a clandestine interview in the park—which was going pretty far—for Allan.

That evening I went to mother's room to tell her that I had determined to give him up. She had finished dressing, and was walking to and fro before her cheval glass, scrutinizing over her shoulder the details of her costume, while Yvonne stood silently by. When I whispered that I wanted to speak with her alone she sent the latter away; and I announced my decision. Her gratification knew no bounds. Never had I seen her so elated.

"You'll get twice as much out of your social opportunities now!" she exulted.

Then she seemed to forget that I was there and started walking up and down again, but not before the mirror this time. All at once she stopped and hung poised on an arched foot. Her clasped hands, with their rosy nails, supported her delicate chin; below them her breast rose and fell in an accession of pleasurable excitement; triumph was on her lips, and in her eyes were dreams—of dukes.

Poor mother! My heart went out to her, and I longed to protect her—from life. Since our ideals were irreconcilable, it was inevitable that I should disappoint her at every turn—again, and again, and again. Between us lay the intangible forces of the Imponderables, holding us forever apart.

As I passed her on my way out I touched an end of the filmy tulle she had wound about her throat, with lingering fingers full of compunction, tenderness and regret.

I stayed at home that night for the first time in many weeks and seated myself in the upstairs sitting room beside the fire, with a book. But in my unsettled mood the tale I had chosen ran its course too deliberately; and as for the fire, it soon became unbearably hot. I moved away; but the walls of the room seemed closing in on me, giving me a sensation of suffocation. The artificial system of heating worked too well; though the month was February, so carefully had drafts been excluded that one could hardly draw breath. I went to the window and gave it an energetic shove. It flew upward, letting in a vigorous blast that stung my temples deliciously.

Fifth Avenue was still pulsating; busses rumbled, motors hummed; pedestrians went by, walking briskly, their necks muffled in their collars. This was no night for lingering.

Only one man—that slim one there—did not seem to be in any hurry. I watched him until he was out of my field of vision. A moment more and he was within range again, retracing his steps. Directly in front of the house he paused, looking up, and in the glare of the arc light I saw John Randall's face—off guard. What I read in it caused me to dash out of the room headlong and run down the stairs two steps at a time. He had not moved when the heavy grilled door yielded to my hand.

"Come in!" I said peremptorily. He made no motion to obey. "I was going to write you," I said slowly. "It's over—the thing we were talking about."

He came in then; and when I had closed the door behind him he said:

"How awfully hard for you!"

"Not any more!" I answered quickly. "It wasn't—the real thing. I think I felt that subconsciously all the time."

In the sitting room, since the window had remained open in the interval, the air was thoroughly changed.

"Why," I demanded abruptly, "couldn't you have rung the doorbell and asked for me? If I hadn't opened the window just then I should never have known you were there! Oh, John Randall, why will you always stay outside?"

His eyes pricked mine.

"Because I'm an outsider," he retorted; "and I never trespass on private grounds. I only skirt them occasionally."

"I'm an outsider too," I said gravely. "I always suspected it, and now I know it. I don't belong here any more than you do. Some day or other I'm going to discover where it is that I do belong!"

He took a deep breath and his eyes glowed.

"I wanted to hear you say it," he avowed. "I just wanted to hear you say it! They've put you in a mold—and you've come out retaining your own shape. It staggers belief! I couldn't have done it. No one could—but you."

"Do you remember," I asked quietly, "the imitation lobster, that night we met? The wolf in sheep's clothing?"

"Yes," he nodded. "And I remember your comment. 'That's what they're trying to do with me,' you said."

"Do you remember your answer?"

"How can I remember what I said?"

"Well, then, I do. You said: 'Don't let them.' And if I haven't, you're more than half responsible."

As I spoke I could see his reserve—that provoking reserve which had so long deflected our lives out of their true course—breaking up, like ice before spring freshets.

"You'd have done it, anyway," he averred. "You've got a nature that would pull out of anything! And there's no ruthlessness in it, either; that's the beauty of it. How you were able to curb it, to hold it down as you did, to defer in every way to your father and mother, to give their system a fair show instead of taking the bit in your teeth, is a marvel to me! And I'm not the only one, either. You ought to hear what Mrs. Winslow thinks about it! You ought to know what she thinks of you, anyway. She thinks you're the straightest, the cleanest-minded, the safest and the most earnest girl she's ever seen. Besides that, she thinks ——"

"Oh, pooh!" I cut him short. "Mrs. Winslow never said that!"

"Some of it she did," he affirmed, the eyes that had been all steady light suddenly atwinkle. "Anyway, I didn't say she said it—I said she thought it!"

We threw back our heads and laughed.

"Why don't you speak for yourself, John?" I challenged teasingly.

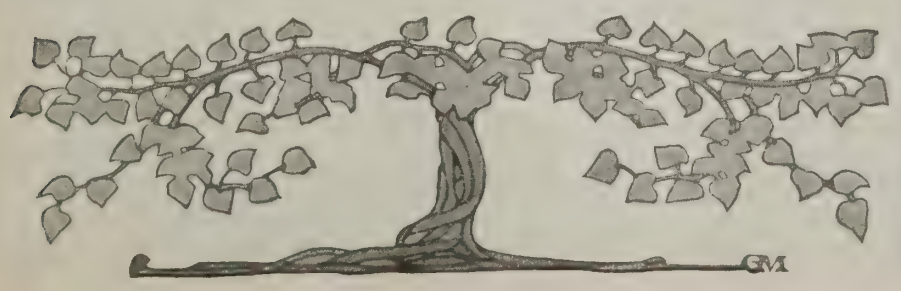
But he stopped laughing and trembled from head to foot.

"It's the money!" he blurted out with a boy's abruptness. "That's what it is, if you want to know."

"But the money's an accident!" I cried, wondering. "An incident! Why do you make it so important? We needn't use the money I'll have for ourselves. We can use it for foundations of some sort—or hospitals. We'll see," I ended contentedly, "what we'll use it for. And meantime we'll be living on yours. You'll have enough to keep me in smocks—if I paint too. Haven't you just made a stupendous success? Haven't you got orders it'll take you two years to fill?"

With one cry he sprang toward me and crushed me in his arms.

(THE END)



Johns-Manville

FOR years Johns-Manville Asbestos has been the braking material for industrial machinery, the severest test that any brake can endure. This industrial record guarantees its performance on your motor car brakes, a service that is relatively light.

NON-BURN ASBESTOS BRAKE LINING

Built for the Motor Car from a quarter century's Industrial Experience

Most brake linings are asbestos. J-M Non-Burn ranks highest of all in the quality of its asbestos fibre. J-M Non-Burn is made only of the longest, strongest strands selected by experts from the great tonnage of Johns-Manville Asbestos taken from their own mines. It is only because Johns-Manville own the largest and best sources of supply of asbestos in the world that a brake lining like J-M Non-Burn is obtainable.

It is this quality of material in J-M Non-Burn plus the resources and experience back of its production that make it advisable for you to ask if the brakes are Non-Burn lined when buying a car—and to insist on it when re-equipping.

To the Trade

J-M Non-Burn is distributed solely through Jobber and Dealer. Discounts are uniform regardless of quantity so that you needn't overstock to assure your profit. You can always get Johns-Manville Non-Burn whenever you need it—because the supply comes from Asbestos Headquarters—Johns-Manville.

The Summer Hot Water Problem Solved!

WITH summer here and the fire "out" in your Heating Plant, the Hot Water problem looms up big. Resolve here and now to settle the question *right*—once and forever.

Kick those old kettles and tanks into "kingdom-come." Then put a Humphrey Automatic Gas Water Heater in your basement.

You owe that to your family.

Hot Water Always on Tap

That's what the Humphrey assures you—a thousand barrels if you want it—INSTANTLY—summer—winter—day or night—bathroom, kitchen, laundry.

No fires to light—*just turn the faucet.* That's all.

And when you turn off the faucet, your fuel expense stops.

This means all the water you want—any time—INSTANTLY—at only one-tenth cent per gallon.

Insist on the genuine Humphrey—the original Gas Heater, with the original features. For sale by Gas Companies and Reliable Plumbers *everywhere.*

Booklet, "Hot Water Like Magic," sent free. Write!

Humphrey Company Div. Ruud Mfg. Co. **Kalamazoo, Mich.**

HUMPHREY
INSTANTANEOUS
AUTOMATIC GAS WATER HEATER
FOR SALE BY GAS COMPANIES AND RELIABLE PLUMBERS EVERYWHERE

Enamolin

Perhaps You Don't Know—

that Enamolin is *the whitest enamel in the world—*

that one gallon of Enamolin will finish *over 600 square feet* of surface—

that woodwork, furniture and walls finished with Enamolin can be washed with soap and water or Sapolio, with never a chance of hurting the finish—

that a room finished with Enamolin will be a delight to the eye years after an ordinary enamel or paint would require refinishing.

The leading painters and decorators know these facts—that's why so many of them are using Enamolin on great hotels, hospitals and private homes.

As for your floors, use Namlac Floor Finish—a finish that is just as economical—just as beautiful in its way as Enamolin. Water-proof, mar-proof, scratch-proof.

Enamolin and Namlac are on sale at the better paint and hardware stores. If you cannot secure them, write to us.

The Whitest Enamel in the world

Ask for free copy of "The White Spot" booklet.

A sample can of either Enamolin or Namlac Floor Finish sent for 10c.

THE SOUND OF MILLSTONES

(Continued from Page 25)

challenges an unknown man in the dark, bayonet lowered and finger on the trigger, uncertain whether the person be foe or friend; but this was wearing off. Toward Hosea himself, even though the farmer's pretentious sentences still jarred a little on him, he began to feel an affectionate tolerance. With the motherless son and daughter he was getting along well. Frank, a tall lad of twenty-four, with his father's suspicious look, couldn't understand why he came away from the city.

"Can't make it out," he would say to Harris. "Appears to me you got a better time up there—theaters, and hotels, and everything. Moment I can get a little money I'm not going to stay here. Not on your life!"

"I like this better," Harris would laugh.

He was too wise in his generation to attempt to explain things to one who couldn't understand.

"Police aren't after you?" Frank would hint sheepishly.

"Not that I know of," would be the answer.

The daughter, Mildred, a thin anæmic girl, tall as her brother, white in the face, with large blue eyes, overhigh forehead and scant hair, would smile demurely at him as he brought in the milk foaming in its pails night and morning. Between him and her there was little said.

"It must be a great change from the city," she would suggest.

"Thank God it is!" he would say fervently.

The few neighbors round seemed to regard him with tolerant suspicion; old Sam Robideau, for example, eighty years old and tough as oak, a little runt of a man with a short beard; and Captain Martin, half landsman and half sailor.

"I suppose you come down to work on a farm so's you take an examination on that Board of Agriculture?" they would try to sound him.

"I came down to be a farmer," he would tell them brusquely. But they would not believe him.

May had gone and June had come, a glowing, golden month with still a touch of cold in the air. At night now for a half hour or so he would go out to the top of the cliff behind the house and look over the Sound. A soft, velvety dusk would come up a half hour after sundown, and through it he could see distinctly the lights of the traffic on the water. A little after nine the passenger boats would go up to New England from New York—three of them, flashing with yellow light, and looking like three golden argosies off on some mystic voyage. The haze of the Bridgeport lights would reflect itself dimly in the sky, and from somewhere across the water a lighthouse revolved solemnly with a swinging saffron gleam. From beneath him would rise the little chanty of the waves on the beach, a delicate minor of sound that suggested somehow the chink of silver.

A great feeling of happiness and freedom would sweep over him, something that he did not attempt to formulate but was content to feel, something big and comforting and balmy, like the smell of pine trees; and occasionally when he felt so he would think of the days on Second Avenue, and the thought of them would sear him like a burning iron. Thank God all that was behind him, he would say, and never again to be opened! At last he was in the light of the candle and at last hearing the millstones' sound.

He would return to the house, past the little millpond where the bullfrogs croaked unceasingly through the night—a queer, unharmonious sound that he liked, broken only by the whang of some mysterious bird and the soft plud of turtles as they splashed from the bank or from logs into the water, or the rustle of a rabbit through the grass—and at times he would stretch his arms out and come near to sobbing, so great was the happiness in him and so far away was Second Avenue.

He was passing through the kitchen one night on returning from the cliff when he heard voices in the living room.

"Sure can work," Frank was agreeing with someone.

"What did I say?" Hosea asked exultantly.

"Queer how he handles that horse," the son ruminated. "It sure will do things for him it won't do for me; and Bill"—Bill was the Irish terrier, an aggressive, uncertain dog with a great barrel of a chest and a fine muzzle—"Bill has certainly taken a shine to him. Follows him round like he belonged to him. Took a bite out of my leg last time I tried to take him out."

"It appears queer to me," old Sam Robideau broke in with his high falsetto, "him being a pawnbroker, as you say, and a Jew ——"

"That'll be all," Hosea raised his voice. "None of that, Sam. None of that. A man's a man, and when I meet a man I take off my hat to him; I do, sir. That boy is as good as me and you, Sam, and I won't hear anything to the contrary. I'm broad-minded ——"

Harris didn't go in. He crept upstairs to sleep, and somewhere about his heart there was a warm glow, as of a comfortable fire, and the faint note of music, like the chiming of delicate bells.

She was not beautiful, that daughter of Hosea Tucker's, and Harris knew that. She had little mentality; his own mind was too incisive for him not to recognize it. But to him she symbolized the fresh air, the green fields, and the rocks among the trees, even as Ceres typified the growing corn and the fruitfulness of earth, for every ideal must have a human embodiment. Along Second Avenue there had been none of that freshness; there had been sophistication. It was, in the main, innocent; but it existed. And to him it came home, with the force of a climax in a play, that here was a woman who used no coloring on her cheeks but what Nature had given her; who was ignorant of the seductions of dress; who knew nothing of the uses of lip stick, or eyebrow pencil, or enamel for the skin, or paste to gloss the nails. This was woman, he thought, as God made her; not the artificial product of the beauty parlor; the helper of, not the lure to, the male.

It was only natural that alone there for months, and undergoing, as he was, this violent sea-change, surcharged with emotion and vibrant as an electric medium, he should unconsciously have sought some object to cling to. And suddenly he found himself thinking about her nearly all the day. It was refreshing to see her in the morning bustling about the spotless kitchen; to return to the house for meals, to find her waiting there for her father and brother and himself. A little mist of glamour interposed itself between his eyes and her features, until it had refined away the anæmic whiteness of her face, making it only pure; had taken the harshness from the high brow, until he saw there only lack of artifice in dressing her hair; had changed the expression of her eyes, which were as furtive and suspicious as her father's were, into one of modesty and timidity.

Her father had strong ideas about her marrying.

"I have figured it out," he said in that large way of his, "and Mildred is going to marry a man, a man from the feet up. She's not going to marry one of your city dudes. No, sir! If a millionaire came round here to-morrow I'd say to him: 'Get out of here. You're half dead. I don't want you.' I want that girl of mine to marry someone who's a man. He may be a carpenter, a farmhand, a road laborer, but he must be hard-working and a man. I've got no fool ideas."

"I think you're right there," Harris would agree.

"To be sure I'm right," the farmer would tell him.

And he thought of her in a new light after that, as a guerdon to be won for manliness and sincerity, as difficult of attainment and as desirable as the king's daughters, whose hands were for the victors in the tourneys and joustings, for the captains who saved their nations in war, for the knights who slew dragons.

She would thank him for doing little errands, jobs for her, in that low voice of hers, and give him a demure glance from underneath her brows, and he would feel a little thrill at that.

"There's simplicity for you," he would say to himself. "In New York they've lost that."

He was affected, too, when after a hard day's work she would press his supper on him.

"Go ahead and eat," she would tell him. "You've been working all day. You need it."

(Continued on Page 105)

THE TEST OF TESTS

The illustration on this page is from an actual photograph of Signor Ciccolini *actually* singing in direct comparison with the New Edison's Re-Creation of his voice, thus adding to the already overwhelming proof that the New Edison Re-Creates the voice or instrumental performance of any and all artists with such literal fidelity, that the original cannot be distinguished from the Re-Creation. Marie Rappold, Margaret Matzenauer, Anna Case, Giovanni Zenatello, Jacques Urlus, Arthur Middleton, Otto Goritz and Thomas Chalmers are among the other great artists who in a similar way have proved the infallibility of this wonderful new invention.

The NEW EDISON

"the Phonograph with a Soul"

is conceded by the music critics of more than three hundred of America's principal newspapers to be incomparably superior to all other devices for the reproduction of sound. This remarkable new musical invention brings into your home a literally true presentation of the art of the world's great musical artists. After you have heard the New Edison you could scarcely be contented with a talking machine. In your locality there is a merchant licensed by Mr. Edison to demonstrate this new instrument. You will not be importuned to buy.

Write us for the booklet "What the Critics Say"

Please do not ask an Edison dealer to sell you Edison Re-Creations if you intend to attempt to play them on any other instrument than the New Edison. No other instrument can bring out the true musical quality of Edison Re-Creations. Furthermore, injury to the records is likely to result if you attempt to play them on an ordinary phonograph or talking machine.

THOMAS A. EDISON, Inc., Dept. 2353, Orange, N. J.

CICCOLINI, *the Italian Tenor,* a great favorite of Milan and Paris, who has just completed a triumphant tour of America. Signor Ciccolini has already achieved a brilliant career, and seems destined to win the highest laurels in the world of opera.

EDGEWORTH

SMOKING TOBACCO

LET'S give the pipe its due. All the credit for a good smoke should not go to the tobacco. Men smoked pipes centuries before the modern tobacco tin was dreamed of. They changed their blends too, occasionally—always seeking a tobacco a trifle more suited to their taste.

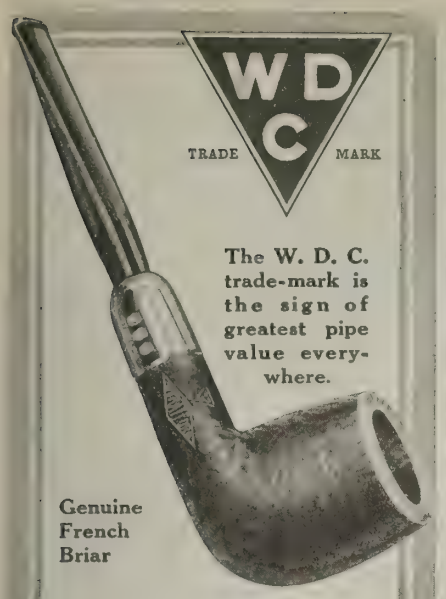
Now you may already be 99% pipe-happy. The purpose of Edgeworth is to give you the additional one per cent that makes complete pipe-smoking satisfaction.

We don't say it will. Neither do we ask you to buy Edgeworth to find out. Gladly will we send you free samples of Edgeworth Tobacco with which to conduct the experiment. We say "gladly" because frequently these samples make regular customers for Edgeworth and increase the sum total of pipe-smoking pleasure.

We say "samples" because Edgeworth Smoking Tobacco is made in two forms, Plug Slice and Ready-Rubbed, and we honestly don't know which you will prefer. Both forms have their enthusiastic devotees.

The retail prices of Edgeworth Ready-Rubbed are 10c for pocket size tin, 25c and 50c for larger tins, $1.00 for humidor tin. Edgeworth Plug Slice is 15c, 25c, 50c and $1.00.

Send your name and address on a postcard (include the name of your tobacco dealer, if you have one, please) and we will immediately mail you generous samples of Edgeworth. It is sold in practically all tobacco stores. Larus & Brother Company, 1 South 21st Street, Richmond, Virginia.



The W. D. C. trade-mark is the sign of greatest pipe value everywhere.

Genuine French Briar

You'll find your favorite style in one of the 24 standard shapes of these four grades of W. D. C. Pipes:

BRIGHTON—
35c, 50c and up, according to size.

WINDSOR—

(Continued from Page 102)

That was perfectly good farm economics, but he read into it a certain personal tenderness for himself that struck harmony in him, like a delicate touch on harpstrings.

Occasionally, as they grew to know each other better, she would ask him about New York. She had never been there. Hosea Tucker—although twice or oftener in the year he made a visit to New York and investigated Broadway completely and with elaborate detail—would never allow his son or daughter to go up. New York was no place for a young man or woman. That was one of the things he had figured out. But in her there burned a fierce and consuming desire to know the city she read of in the papers—its lights and gayety, its skillfully dressed men and beautiful women, its theaters and its cabarets. She would have thrown away her comfort at home to go to New York and work there endlessly at the most menial occupation, simply to be there and of it. But she had not the courage to gainsay her father and assert herself.

"Tell me something of New York," she would ask with careful distraction. There was that in her, and from her father she got it, which urged her to conceal her feelings, when concealment was unnecessary; a quality of vanity which believed that the world was meddling with her affairs; the inherent strain of deceit.

"You should see Fifth Avenue on Saturday afternoon," he would begin, and then he would tell her of the crowd that swarmed like an army with banners. He would tell her of Second Avenue at night, with its line of hawkers' carts illumined by sputtering naphtha torches, and strange commodities being offered for sale in strange, discordant tongues. Eloquently he would tell her of Broadway, noisy and a-glitter; of the brooding river beside the Drive; of the hooting traffic in the harbor; of the great bridges of stone and steel. He liked telling her of these things, to amuse her and to pass her time, as one might tell a child a fairy story, like the story of the Sleeping Beauty in the Wood, or of Aladdin and the Potent Lamp, or of the Caliph and the Kalendars of Bagdad.

"Is that so?" she would comment blankly, biting short her sewing thread. That was all.

"She doesn't care for it," he told himself exultantly. "She's content where she is. Thank God, there's one woman who doesn't want excitement and cabarets!"

A certain intimacy was growing up between them, an intimacy of gayety and banter. Once or twice their hands met over the milking pails; once they clasped while he was driving her into Port in the buggy. Each time she blushed, but said nothing.

"Why aren't you married?" he questioned her jokingly.

"Nobody asked me," she smiled at him.

"Supposing I were to?" he smiled back.

"Oh, I don't know," she answered, and she laughed gayly. A sudden resolution took him, but he checked it.

From then on, for a few days only, he ceased to joke with her. The thought of marriage appalled him. For that one of the prejudices of his race, high as a walled city and impregnable as a tower of brass, still clung to him in a thin but unbroken thread. If he married this girl of an alien people, he would cut himself loose from his own. His father would call down the lightnings of Sinai to strike him. His mother would hardly dare think of him. To the whole of his family his name would be silent, like the name of one ignobly dead. He must live alone and die alone.

"But is it right?" he asked himself quickly. "Is it right?"

He couldn't decide about that, but of this one thing he was sure—that for himself, at least, it was only proper to drop the ancient prejudice. He had come out here as a man, to do a man's work, and to adopt the customs of the folk with whom he was. If this girl were of his own race, would there be any obstacle? There would be none. Well, then, let the obstacle not exist! It had been, he felt, that offensive defense of his people against the outer races which had narrowed them into the back streets of Europe; that clinging to provincial habit and ethics which had singled them out and drawn attention through the ages. He might be wrong, he granted, but so it appeared to him.

He met her at the gateway of the orchard and spoke to her as she was coming through.

"About that question," he said: "I'm going to ask it of you."

KRYPTOK GLASSES

For Near and Far Vision

If you have to remove—or awkwardly peer over—your reading glasses every time you look at distant objects;

If you fuss with two pairs;

Or if you wear the old style bifocals with the conspicuous seam or hump—

Then you need

KRYPTOK GLASSES

THE INVISIBLE BIFOCALS

The upper part of KRYPTOKS *(pronounced Crip-tocks)* gives the necessary correction for far vision and the lower part for near vision. You can adjust your vision instantly from printed page to distant view.

No troublesome removing of glasses—no fussing with two pairs. You see *everything* clearly through KRYPTOKS.

The surfaces of KRYPTOKS are clear, smooth and even. They are entirely free from the unsightly, age-revealing seam or hump of old fashioned bifocals.

Ask your oculist, optometrist or optician about KRYPTOK Glasses.

Write for "Eyesight Efficiency"

Our booklet, "Eyesight Efficiency," contains important information for everyone who needs glasses for near and far vision. When writing, please give (if possible) name of your oculist, optometrist or optician.

KRYPTOK COMPANY, INC.

Bran Means

A Better Day

Try this regime, for health's sake, for one week.

A dish of Pettijohn's—a delicious dish—each morning.

It will bring you bran in its most efficient form.

It will point the way to a perfect day.

It will win you to this natural laxative.

It will introduce a dish so luscious that you'll never wish to miss it.

Pettijohn's

Rolled Wheat—25% Bran

A breakfast dainty whose flavory flakes hide 25 per cent unground bran.

Pettijohn's Flour—75 per cent fine patent flour with 25 per cent bran flakes. Use like Graham flour in any recipe.

Both sold in packages only.

(1522)

WANTED NEW IDEAS Write for List of Inventions Wanted by manufacturers and $1,000,000 in prizes offered for inventions. Our four books sent Free. Send sketch for *Free* opinion as to patentability.

Victor J. Evans & Co., 727 Ninth, Washington, D. C.

"What question?" she asked furtively. He did not notice the furtiveness. He thought it only modesty.

"I am going to ask you to marry me, Mildred," he told her with simple directness.

"You must ask father," she said nervously, and ran into the house.

Hosea was not home yet. He had been to the county fair at Riverhead, with Frank and old Sam Robideau, and might return at any minute. September had come in now, with a touch of cold in the air, and over the ridge of the hills westward the harvest moon was rising like a great gold coin. It seemed to flood the country with a golden light that was like a liquid, and cut the porch of the house into a sharp chiaroscuro of object and shadow. In the woods about the house the katydids were chattering incoherently, a presage of frost. Here and there in the darkest corners could be seen the faint red glow of fireflies, like the sparkle of minute rubies.

Harris moved unconsciously toward the shore of the Sound, passing the little pool from which a misty haze was rising, like some misty emanation from a sacred well. The high elm trees threw shadows before him that seemed like great logs thrown in his way. He came to the brink of the cliff and stopped.

Before him the Sound lay, a great stretch of glasslike water, calm and cold beneath the moon. Beneath him he could hear the lick and swish of the incoming tide and the faint grinding of pebbles.

So the die was cast, he said to himself. There was no going back now—not that he wished to. He was to marry this girl, this wholesome country maiden, fresh as the springtime itself; and there close to the land he would live with her to the end of his days, well-ordered, healthy, happy. Forever the grinding chaos of Second Avenue was put away. Here he would take a wife and live.

"'The voice of the bridegroom, and the voice of the bride'"— he quoted to himself softly—"'the sound of the millstones, and the light of the candle.'"

He looked round at the swelling hills behind him, silvered by the moon, at the tall trees and the fruitful fields. He at last had found Zion.

"Zion!" he murmured to himself, awed by the great name.

And then suddenly the idea exploded within his brain that here was not only his Zion, but the Zion of his people. Not in Africa, not in the Mesopotamian valleys, but here in America, by the land and sea. Not in the gullies of the East Side nor in the sweatshops of Williamsburg, but right here by the kindly earth. Here were fields as fruitful as the olive gardens of Bethlehem; trees as mighty as ever grew by Lebanon hill; fishponds as well stocked as any of Heshbon; grazing land as bounteous as any by Kerith stream. Here might they till their fields and tend their kine. Here might they grow in grace and favor, loving and well beloved.

"Zion!" he shouted aloud in ecstasy. "Zion!"

He would go forth to his people, he said, go forth and preach to them. He would go down into Second Avenue and lead them out. He would take them from the sweatshops and the peddlers' carts. No longer should they dream of a torrid home in Africa or dicker for an Asian valley. No longer should the terrible litany be recited at the Temple's wall. They would come here in peace and good will, leaving aside their ancient prejudices and intensive cult, and mingling with the dwellers in the new land.

"Zion!" his voice rang over water and wood like the trumpet of Jericho. "Zion!"

And she would be with him in his work—she, the white and ruddy one! A great flood of tenderness and love and adoration swept over him. Fair as the moon she was, clear as the sun. As a bundle of myrrh she was to him. Behold, she was fair, his beloved; she was fair; she had dove's eyes. . . .

As he passed through the kitchen he could hear and distinguish the voices in the living room—the booming and inflated tones of the farmer, the shallow baritone of his son, and the mellow, salty voice of old Robideau. The farmer was speaking:

"I'll allow I was wrong in that first trotting contest. I'll allow I was wrong. When I'm wrong I give in. I'm not stubborn or bigoted. Yes, sir, that horse was a surprise to me ——"

Harris strode into the room.

"Well, Ben boy?" Tucker greeted him. "What's on your mind?"

In the center of the room on the table the big green-shaded lamp threw a circle of yellow light and faintly illumined the remainder of the room outside it. The heavy old furniture loomed up in bulky shadows here and there. The sea-beached logs in the great fireplace flared up with sudden spurts of yellow and green and purple. Beside the fire old Robideau sat, leaning on his oak stick with his gnarled brown hands. The farmer sat by the table, with Frank across the way from him. In the shadows Mildred was knitting. She looked up, a little startled when he came in.

"Mr. Tucker," he said boldly, "I want to marry your daughter Mildred."

"Eh?" The farmer looked at him in a puzzled way, as if he had not heard aright.

"I want to marry Mildred."

"You want to marry Mildred!" Tucker repeated with his mouth agape.

"Yes," Harris nodded. "I do."

The farmer got up slowly and looked at him. Suddenly the gaping look passed from his face. The mouth closed and the corners drew back. The eyes narrowed and the false geniality went from them, and an expression came into them like the expression of an untrustworthy dog.

"You want to marry Mildred!" he repeated. "Well, of all the damned impertinence!"

He turned to the old man at the fire and laughed raucously.

"I knew it would come to this," he said. "I knew it! I pick this thing out of the gutter. I take it down here. I give it a home. And now it wants to marry Mildred!"

"You did none of these things," Harris snapped back at him; "and why shouldn't I marry Mildred?"

Tucker's face became purple with passion. His eyes protruded and he beat furiously on the table with his hands.

"Why shouldn't you marry my girl? Is that what you ask?" he thundered. "Do you know who you are and what you are? And you want to marry my daughter? Go back to your own kind, you scut! You and your fleabitten, dirty, cheating tribe come over here and eat the country up. Keep to your filthy pawnshop—that's the place for you."

He paused for a moment, out of breath. His son had risen and stood beside him threateningly. In the shadows the girl still rested immobile. The old man by the fire laughed with a horrible, wheezing cynicism.

"Do you know anything about this?" Tucker asked of his daughter fiercely. "Did he say anything to you?"

"No," she answered frightenedly. "He said nothing."

"Get out of here!" the farmer shouted at him. "Get out of here before I kick you out! I've a mind to get the horsewhip for you. Get out!"

"Go back to your pawnshop," the son snarled at him, and again the old man laughed.

He stood for an instant looking at the four of them with a glance so fierce that it stopped the words in their mouths like a drawn sword, and then turning on his heel slowly, dignifiedly, carelessly, he went through the door out.

A minute it might be he stood in the moonlight, dazed, before starting on the road to the station. The high voices inside still rose passionately. Once more the old man laughed in his grating, grinding way, and it seemed to Harris as he listened to that cynical cacophony that somewhere was the sound of millstones revolving, and that he was only a grain of corn being crushed to powder beneath their ponderous, unrelenting motion.

III

OLD Aaron Harris cannot understand why his son should so suddenly have become reconciled to business. Above all, he cannot understand how Ben, who used to be so lax about the proper valuation of pledges, about the lapsing of tickets, about the four per cent per month interest, should turn so fiercely shrewd in driving bargains and so savagely implacable in his demand for the fulfillment of the bond. No, he can find no explanation for that.

But the folk of the vicinity, the Little Russians, Esthonians, Courlanders and Finns—that whitish-haired, heavily built, stolid people with dumb eyes, who bring in their clothes, their tools, their jewelry to pawn—they have an explanation. "It is the Jew breaking out in him," they say, and their features become distorted with futile rage. "If he were only in Russia now," they snarl—"the Black Hundred. . . ."

Ivory Garter

REGISTERED U. S. & FOREIGN

The Hygienic Garter

The Ivory Garter has no pads. Neither will it bind your legs; hence it is the best garter for those suffering from varicose veins. And there is no metal to rust. The Ivory Garter is the modern, hygienic, sanitary garter. Buy it at your haberdasher's.

Prices: Silk 50 cts. Silk Finish 25 cts.

Dealers: Order from your jobber or direct. Write for catalog which includes garters for women.

Men's Side Garter

For those who do not like a garter around the leg.

Prices 50 cts. and 25 cts.

"That's From the New York Office"

Even the office boy knows the branch office mail at a glance when a special color of paper is used.

A printer gave this firm the idea, and the printer got it from our portfolio, "The Signal System."

This portfolio shows how, by availing yourself of the 12 colors and white in which Hammermill Bond is made, every form or inter-office communication identifies itself before it is read.

When the color of a form tells you its general character you can plunge right into the message it carries. Your mental attitude is automatically adjusted to the contents of the message. You can concentrate on the message itself immediately.

The reasons for using Hammermill Bond are plain. In the first place, your printer knows the paper and can get it. Its quality is standard. Shopping around for a better bargain is simply wasting time.

The three finishes—Bond, Ripple and Linen—the 12 colors and white, give a wide assortment from which to choose. Hammermill Bond is a strong, durable paper with a fine finish.

Our portfolio, "The Signal System," will be sent you on request. It contains a variety of sample forms showing how the System may be applied. In addition, we have made up a number of specialized portfolios applying to different classes of business, and will send you the portfolio that specializes on your business if you ask for it.

Your printer probably has a complete set of Hammermill Portfolios. If he has not, we want him to have them.

The specimen forms they contain include some that may be a great convenience to you, and which he can supply at little cost.

HAMMERMILL PAPER COMPANY, ERIE, PENNSYLVANIA

HAMMERMILL BOND

"The Utility Business Paper"

Prince Albert's quality gives joy that makes smokers glad they're on the job!

Flashes such flavor and fragrance into your smoke-system so quick and so friendly-*like;* tips you to bang away so heartily that you feel you must hire-a-hall and sing-a-song that'll be heard from Boston-to-Bombay!

We have always preferred to give *quality!* And, me-o-my, how smokers have come across and backed our judgment! Every P. A.-pal has wised up to his personal smoke-satisfaction that the speedier he opens up his smoke-throttle the better he likes Prince Albert! For, its *quality*-flavor and *quality*-fragrance are right there—and P. A. won't bite or won't parch, no matter how fast you push it! That's because our exclusive patented process *cuts out bite and parch!*

Might just as well prove this say-so *now:*—Every puff of Prince Albert has a quality tag tacked to it! Each fire-up goes you one better than the last! P. A. tunes your smokeappetite so cheery you hit a new excuse to fill 'er up again every little once and a while! *Quality puts such go-to-itness into*

PRINCE ALBERT

the national joy smoke

Prince Albert has brought thousands of men to know the happiness of the smoke-pastime! *It will win you* on its downright goodness, due to its quality, if you'll stand-by-for-a-spell and take at 100 per cent what we tell you about P. A., or what smokers all over the civilized world will tell you!

Costs you mighty little to prove our confidence in what Prince Albert certainly can do for your smoke-content. For, the toppy red bag costs but 5c; the tidy red tin, a dime. Or, take a fall out of the handsome pound or half-pound tin humidors—*or*—that clever, practical pound crystal glass humidor with sponge-moistener top that keeps the tobacco in such perfect condition.

You buy Prince Albert *everywhere*—like you find men in all walks of life smoking it—*everywhere!*

FIRST AID TO AMERICA

(Continued from Page 7)

"The French system seems to me the better—at least, for us. It would better suit our way of doing things. Then there are special reasons. The British plan gives the manufacturer no incentive except patriotism, which may or may not be strong enough in him to make him increase output. The French plan does; and since France insists that employees on this work shall not be underpaid or overworked, it has not been any less just to the workmen, so far as I can learn, than the British. The proof of its efficiency is that the French, with only one-third as much shop capacity as the British, were for a long time making more munitions and equipment. Further, in many factories, converted from commercial to military use, not more than two-thirds of the plant, say, serves for making munitions. The remaining third must be idle or partially so under the British 'controlled establishment' plan. Under the French plan the manufacturer—unless he be short of labor—can keep that remaining third running just as well as ever. This helps to maintain the normal industries of the country, a thing very desirable in war.

"The German system resembles the French. They had a great initial advantage in their Krupp Works and other munitions factories—the best and most extensive, before the war, in Europe. These are the assembling factories under the German system. The great munitions makers let out subcontracts, under government supervision, to factories, foundries and shops. Russia was not much of a manufacturing nation before the war. She has been forced to build large munitions factories.

"Now I've worked round to the answer to your question. The Constitution makes the President commander in chief of the army and navy in time of war. If we adopt the French system, or something like it, a Federal statute would have to be passed giving him power to commandeer factories, or at least to make them yield precedence to government work in time of war. Such a statute might be constitutional or it might not. That is according to whether the command of the army and navy is stretched to include authority over supplies for the army and navy. Though armed with such a statute, the President, or a department under him, need not necessarily command. The manufacturers, judging by the experience of Europe, will probably have enough patriotism to go to work gladly. The law would be merely a club to hold over those unpatriotic enough to refuse or to object to the government terms. If we fully adopt the French system, with its adjustment of prices, we can prevent individuals from bringing reproach on us by making huge fortunes out of a national peril."

The Shops Behind the Army

"Under such a law the Department of Munitions should form committees, as the British have done, from the best available technical experts in each main line. Their job would be to treat with the manufacturers, to inform and educate them, to keep them up to the scratch. Enough detail work will be needed! The number of articles needed to equip a modern army is bewildering—not only cannon, rifles, grenades and bombs, but uniforms, caps, boots, belts, aëroplanes and aëroplane parts, motor trucks, gun carriages and caissons, field kitchens, field bakeries, pontoons, 'grub cans,' canteens, duplicate maps, wire, field telephone apparatus, surgical appliances, wireless installation—a thousand things.

"If we follow the French plan our arsenals, prepared for rapid expansion, should be the main assembling depots, with subsidiary depots in various centers. And here is another preliminary job. Most parts of munitions can be made with the machines and machine tools at present in commercial use; but certain munitions parts require machinery and tools never used for any other purpose. I think at this moment of rifles. Woodworking shops can turn out the stocks. Probably factories now making commercial goods can fashion, with a little adjustment, every separate part of the lock and magazine. But special machinery is necessary to bore a rifle barrel. Owing to our manufacture of munitions for use abroad, we have more of this machinery than in 1914. But we have not enough. Moreover, there are certain parts of certain munitions that have never been made in this country. A necessary part of the preliminary work would be to install as much of this special machinery as possible in our arsenals.

"When you think it all over you are bewildered by the detail. Has anyone in this country thought much about the question of repairs? Equipment is forever being damaged, especially in action. Some parts wear out before other parts, which can be saved and used in a new article. Broken and worn-out equipment is all the time going back from the Western battle Front to the great repair shops the French, the Germans and the British have set up behind the lines. Probably they keep three or four rifles going for every man at the front. One rifle comes back with its bore worn out through firing, but with a perfectly good stock. One comes back with its bore in good shape, but with the stock splintered by a bullet. Secondhand rifles are reassembled and tested at these depots and returned as good as new. And the rifle is one of the smallest and simplest things used in modern warfare."

"All that," I said, "presupposes that we must create an army and use it. But what about the present situation?"

The Present Situation

"It is the present situation, in a way," he said. "The first year after this war may be our period of greatest national danger. The European nations will emerge into peace almost bankrupt, loaded down with taxes, overrun with men displaced, in mind for any abnormal occupation, ready for any national adventure that will help them to recoup. Also, they will have veteran armies, fully equipped.

"There is Mexico. It holds heavy investments, at present unproductive. If we don't enter this war in some fashion no sentiment will keep any European nation from enforcing what it believes to be its rights in Mexico, or demanding that we enforce them. There is South America. Germany had her eye on that region before the war. Universal disarmament should be our goal. But we shall carry little weight in a demand for disarmament if we are in the position of asking it because we cannot defend ourselves. We shall need an army at the close of this war much more than we need one now."

"But the present situation ——" I insisted.

"All that is according to what we propose to do. If you ask my opinion on the future, it is unlikely, in case of war, that we shall make a political alliance with the Entente Allies. After all, our objects are different. We shall, no doubt, have to resist pressure from them toward a larger participation in this struggle. It is more likely, judging from the temper of Congress and the country, that we shall simply go in to protect the rights we have laid down in the President's notes. That will mean helping to police the seas and convoy ships, which will call for as large a mosquito fleet as we can get together—fast, armed motor boats, and fast, modern destroyers, rather than heavy ships or submarines. Fortunately we have been building many of these fast boats.

"If we wish to work still more closely with the Allies I should advocate this: The French Army, which is the most expert in Europe, has probably passed its zenith in man power. We might assist and encourage the enlistment of Americans in a special corps to be trained in France, by French officers, and drafted into the French fighting corps as soon as it was available.

"It would take at least a year—probably longer—to raise, to train under modern methods, and to equip an army for service abroad. Very likely the war will not last so long as that. Moreover, when the time came to transport it, the Allies would have great difficulty in finding the ships, in view of the present crisis on the seas. But a force of this kind could be sent across gradually, as it was recruited. Within four or five months after these men arrived, the expert French officers, with intensive modern methods of training, could have these men ready to be scattered among more experienced troops at the Front.

"I advocate France not only because she needs the men but because most Americans sympathize with her more than with any other European nation, and because Americans usually get along well with the French.

ACORN RANGES

Dinner bells are joy bells!

—when a first-class cook has a first-class range!

Biscuits with creamy sides and crisp tops lightly browned!

An inexpensive cut of meat made into a dainty dish that tastes good and looks good and makes you ask, "Why can't we have this oftener?"

Mashed potatoes. Mashed! What an absurd word for anything that looks like whipped cream.

Just one other vegetable, your favorite, cooked your special way.

A simple dessert that will just barely touch the small spot still left after second helpings.

Coffee—a second cup, please!

A simple menu: biscuits, meat, vegetables, dessert, coffee—a simple menu, *but what a dinner!*

And opposite you sits the little lady that did it all, with the cheery smile that betokens pleasure in skill interestingly displayed.

One way to *get* a first-class cook is to get a first-class range.

"Let good digestion wait on appetite, and health on both."
—*Macbeth.*

The chief purpose of a kitchen: A Good Place for a Good Range.
—*Acorn.*

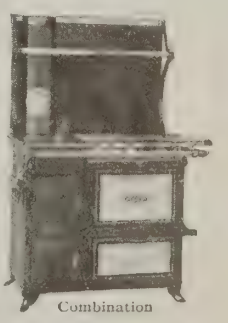
Made for 87 yrs.— Acorn RANGES —always Improving

Gas, Coal, Combination and Electric

Baby Grand

The Acorn Baby Grand—gleaming with white, nickel and glass on black—graceful in form and compact—two baking ovens, one broiler oven, warming oven, six top burners. "What a perfectly *beautiful* range!" you'll exclaim.

If you have to use coal part of the time, see the Acorn Combination Range for both coal and gas. In one style, a lever does it all. Lever up, coal stove; lever down, gas stove.



Combination

If gas is not available, let your hardware or furniture dealer show you an Acorn Coal Range designed to cut down coal bills. He knows what it saves your neighbor.

The Acorn Electric Range, a joy and pride to the housewife who is so situated that electricity is the fuel she ought to use. So thoroughly attractive it would not be inappropriate in the dining-room itself. The charm of the chafing dish and the utility of a range combined.

The American Boy of 1630

DAISY
AIR RIFLES

LOOK back over American history, and see how in every generation—from the Pilgrim Fathers at Plymouth Rock down to your own grandfather and father—the American boy has been trained to handle a gun and shoot straight.

It's a natural instinct in every American boy, inherited from many generations of hardy, keen-eyed ancestors, to want a gun—to know how to use it properly and to excel in marksmanship.

Your boy should have this training—with the best and safest gun made for boys, the Daisy Air Rifle. Millions of American men learned their first lessons in concentration, self-control and love of manly, out-door sport from the Daisy. For over 27 years it has been recognized as the favorite rifle of the American boy, and today, in its latest models, keeps pace with the highest art and science of modern rifle design.

The Daisy Pump Gun, in the hands of the upper boy in the picture, is a 50-shot repeater, with the same modern pump action found in the highest type of modern sporting rifle.

The Military Daisy, also a 50-shot repeater, follows the latest military lines, with carrying strap and removable bayonet.

Both guns are finished in blued steel, with turned walnut stock, and sell at all dealers for $3.50

Other Daisy Models, . . . 50c to $2.50

If your dealer cannot supply you, any Daisy model will be sent direct from factory on receipt of price. Send for descriptive circular.

Single Shot 25c 5-Shot Repeater 50c

There is something in common institutions after all. Again, this force, trained by the 'headiest' fighters in the world, would be very valuable in case of trouble after this war. It wouldn't be a bad thing, either"—here Jones smiled—"to have, as nucleus for a new American Army, a body of men accustomed to a democratic system of discipline, which suits the army of a republic—as the present system does not.

"However, that's impinging on military affairs. Our most valuable help to the Allies—everybody is saying that, and I agree—would be financial and industrial support. Let's look into the financial question. We have profited enormously by this war—profited to a degree that is dangerous in view of the envy it will create. The profit on exports for war purposes is large: for every dollar's worth of goods we ship to Europe we have been adding fifty cents to the national wealth.

"We can pledge some of that, if not all of it, to the Entente Allies by what I may call 'banking encouragement.'

"For example, if the Federal Reserve Board, instead of discouraging loans to those nations, as it does now, would rediscount British and French treasury bills up to some proportion of the capital of the member banks, it would open up an immense avenue for easy Allied finance. The money so raised would be used for the purchase of munitions and supplies here. Even if we eventually lost from a third to a half of this money—which is unlikely—we should not lose a dollar from our national wealth, because of that profit on shipments to Europe."

The Parasitic Woman

"Next, in the way of financial and economic coöperation, comes the service we could render in solving the shipping problem. It is little enough, perhaps; but, besides crowding all force on to ship building, we could help in other ways to provide transportation space. Neutral shipping might have to be coerced, which may be arbitrary; but it is war. At present the British have the only available supplies of coal on their side of the water. They have been refusing to coal ships of neutral companies that would not agree to give a certain proportion of their tonnage to supplies for the Allies. However, many ships have taken to coaling for the round trip in American ports—we have the only supply on this side of the Atlantic. With our coöperation this rule could be made absolute.

"The food blockade on Germany has its leaks; and the policy, if debatable, has gone too far to be dropped now. We could do much toward stopping the leaks. Supplies of food are still going into Germany from the native products of adjacent neutral countries, to be indirectly replaced with supplies from the United States. Were we in coöperation, we could export food to such countries only upon an agreement with them not to send equivalent native supplies into Germany.

"If the link with the Allies is made tighter, if the war should come to the point where it began to pinch our resources, some national scheme of curbing the extravagance that has been running riot in the past few years would become immediately necessary.

"You know, I regard war, on the whole, as an evil thing. I cannot go any distance with the militarists. It is tolerable only in those pinches when it must be a choice between war and some greater evil. But it has its partial compensations; and the fallacy of the militarists lies in making the evil seem less than its compensations. Chief of these, perhaps, is the spirit of nobility and self-sacrifice it brings in the civilian population; and second, the development of new and tried leaders among the people. If we are to have war, with its hatreds, its disturbances, its check to all good causes—perhaps with its spilling of our strongest blood—we should at least have the compensations. So far as we can, we should check extravagance in living, dress, travel and amusement, and set the people to saving. It will be good not only for the conduct of the war but for our souls.

"To begin with, there is our useless and extravagant eating and drinking in public places. I have heard it estimated that in New York two hundred thousand dollars a night is spent in restaurant suppers alone. I can easily believe it. At the lowest estimate we must spend a million dollars a day in useless eating—just 'going out to dinner' at public places. It is probably nearer five million dollars. Almost all that money, from the point of view of nourishing the human frame, is wasted. And five million dollars a day would carry on a good-sized war.

"We can't pass sumptuary laws under our Constitution, I suppose. They aren't exactly necessary. But much can be done by national propaganda to limit extravagance in eating, in dress and display. The British tried that. With their energies taxed in every direction, they hadn't time to give the matter much attention or energy. The propaganda went no farther than influencing the newspapers, putting out a poster or so, and encouraging discussion. Even at that, it accomplished a great deal.

"We could give much more energy to this matter by a central bureau in Washington, with subcommittees all over the United States. That is one place where we could use our women to great advantage. We are good advertisers. A few phrases, too, would help turn the trick—the world lives by phrases, and we most of all perhaps. 'The Parasitic Woman'—that turn of expression alone has done a lot, I suppose, to make women of the well-to-do class turn to something useful. We need some phrase that puts the stamp of shame on wasteful eating, dressing and display of jewelry.

"Though we could not bring the law to bear on this, but only educate and direct public opinion, we could restrict extravagance in another way—by banning certain imports, such as wines, spirits and jewels. We admitted forty-four million dollars' worth of diamonds and other precious stones into the United States last year—a useless luxury. Those imports could be stopped. So we might stop the importation of fresh fruit from Europe. Though not exactly a useless luxury, this imported fruit is not necessary to national well-being in view of the fact that we raise enough oranges, lemons, grapes, apples, peaches, prunes, pineapples, and the like, to keep our public in good health.

"Fruit is a bulky commodity. It occupies entirely too much valuable cargo space. In the restriction of imports we might take one thing into account—the industrial state of some of the people we should be trying to help. The French keep things running as best they can, and they manufacture many luxuries. The diamonds come mostly from South Africa; and, though that is a British possession, very little of the money they bring in gets to the central finances of the empire. A special commission might be necessary to adjust these questions.

"This leads up to the food question—interlocks with it, as a matter of fact. Before the year is past, we may have to face some kind of restriction and regulation of food consumption, especially if we have even a nominal declaration of war and ally ourselves, even loosely, with the Entente. The world is short on food, which is the main cause for increased prices here."

Hearty Eaters

"Leaving out Germany and Austria, whose problem is their own and does not affect that of the outside world, the crops in the Western Entente nations have been low rather than high; for lack of fertilizer and labor the Russian supply is cut off; there was a bad harvest last year in North America, and some of the world's grain supply has gone to the bottom in torpedoed ships. Troops at the Front need much greater quantities of animal food than the same men consumed in peacetime. This has lowered the supply of meat, because the world has broken into its breeding stock.

"We may have to do our part in conserving the world's supply. We eat a great deal more than we need. Food experts do their reckoning in terms of assimilable calories. The average person in the United States consumes four thousand calories a day. In rationing the German people some of the specialists reckon that an average ration of nineteen hundred calories a day will keep the population in health. Allowing liberally for our habit of ample fare, and for the robust physique of the American people, we could get along very well on twenty-four hundred calories. Our possible saving, then, is forty per cent. We can't reach that point short of such an emergency as Germany is facing now. That, perhaps, goes without saying.

"As a general rule, control of affairs in war demands intense centralization. There are exceptions, however; in some departments decentralization works better. This

TIMKEN-DETROIT AXLES

Prophecy and Fulfillment

Four years ago the advertisement at the right announced fulfillment of a Timken-Detroit axle-building policy. But it didn't stop there—it anticipated a greater fulfillment that has since been realized in the commercial car axle of today.

THERE'S nothing so good that it can't be improved. Building for the future is the greatest inspiration for turning out good work today.

That principle is responsible for Timken-Detroit Worm-Drive Axles today as it was for their sturdy chain-drive predecessors of 1913.

The 1913 axle was the fulfillment of a Timken-Detroit ideal for which we have been working in co-operation with far-sighted truck builders since the beginning of the industry.

Briefly, that ideal was to build axles strong enough and serviceable enough—*even though they cost the truck builder more money*—to have them stand up to the severe emergency conditions of commercial haulage.

We knew that trucks would be overloaded—that drivers would take the shortest road, no matter how rough—that "empties" would come back at a speed far beyond the builder's intentions.

In 1913 the battle had been won, the necessity of special engineering requirements for commercial car axles was accepted by the industry.

But even then Timken-Detroit engineers were working on something still better, on axles that would, with equal strength, have greater simplicity, fewer parts to get out of order, more efficient, noiseless operation.

Again there were skeptics to be convinced and manufacturing problems to be overcome, but the principle would not be denied, because it meant dollars in the truck owner's pocket.

That battle, too, has been won, and *worm-drive has come into its own.*

According to a competent authority, 61% or more of all motor trucks built in 1917 will be equipped with worm-drive.

But no man can say the limit of perfection has been reached, and some day we may again remind you of Timken-Detroit prophecy and fulfillment.

THE TIMKEN-DETROIT AXLE COMPANY
Detroit, Mich.

Lee Union-Alls—Needed By Every Man!

ANOTHER victory for civilization! A work garment vastly superior to the old-fashioned two-piece overalls! So great an improvement, indeed, that four big factories can hardly supply the demand. Just as union underwear has superseded shirt and drawers, so are one-piece **Lee Union-Alls** superseding overalls and jacket. More comfort! More convenience! More service! No belt to bind; no tiring, chafing suspender straps; no double thickness at the waist, no jacket tails to get in the way! No matter what your trade, profession or employment in life, if you wear old-fashioned overalls in your daily work, or only periodically for odd jobs around your automobile, about the house, or in the garden, you'll find **Lee Union-Alls** indispensable, the most useful satisfactory garment in your whole wardrobe.

Men in all trades are spending every working hour in them. Motorists carry suits in their cars to slip on when emergency demands. As an outing or vacation garment for men and children (yes, and women too) the advantages are enumerable.

HONESTLY and sturdily made to the last stitch, with reinforced strain points, triple-sewed seams, riveted buttons, and highest quality material, **Lee Union-Alls** reduce the high cost of living because they save clothing and laundry bills; besides, they give far more satisfaction than old-fashioned two-piece overalls. **Lee Union-Alls** are made of khaki, heavy blue denim, express stripe, pin check or white twill.

Lee Union-Alls are at first class dealers' everywhere. If your dealer cannot supply you send your order direct to any of our factories enclosing money order and stating size and material desired. Sent prepaid to any address in the United States.

UNION Lee MADE
Union-Alls

(Continued from Page 110)

seems to be the case with food control. The German system has been a failure. It was run from the central government. Agents were sent to every corner of the empire with hard-and-fast rules. They knew nothing of local character, conditions, tastes and prejudices. They caused friction, resentment, hoarding of food, sullen evasion of the rules. The plan of the Relief Commission has worked better. Though there is central control and supervision, the distribution for each town is in the hands of a local committee, which knows the people and understands their ways. It takes a big staff, though."

I was able to put in my oar at this point, since I have been interested in the Commission for Relief in Belgium from the beginning:

"Fifty-five thousand Belgians, among the ablest people of the kingdom, are volunteers in this work. There are nearly fifty thousand paid employees—like warehousemen and cooks in the public ration stations—or a staff of at least a hundred thousand people. Belgium now has seven million five hundred thousand people within her borders. At that rate, we should need a staff of about one million four hundred thousand!

"Of course that's impossible," I added; "but the condition is impossible too."

If Distilleries Were Closed

"Of course," responded Jones; "but the Belgian experience merely illustrates the value of decentralization in these personal aspects of a nation at war. We could do some of this work, just as we could reduce personal extravagance, by a propaganda organization, the work being done by local committees; in fact, the two campaigns would interlock.

"Here, again, there could be some indirect measures; and more important ones than the limitation of imports too. If I were dictator in this war I should stop all brewing and distilling for beverage purposes, at once. They consume enormous quantities of the grain that Europe needs so badly. The product adds little or nothing to human nutrition—at best, it is a luxury; and the by-product is merely cattle feed—and that can be found in other ways. The effect on national efficiency I need not describe. . . .

"We can't do that directly by Federal statute, I suppose. We could, however, approach it by means of a prohibitive excise tax. If brewing and distilling were stopped we should lose much revenue. We could make that up in other ways. The important thing is to conserve the food supply.

"There is the question of flour milling. Owing to our habits of eating we waste a lot in that industry which Europe utilizes nowadays. We mill up to seventy per cent ——"

"I wish you'd explain that," I interrupted.

"Wheat contains about eighty-two per cent of recoverable human nutriment. If you mill out seventy per cent twelve per cent goes to fodder. However, the less you mill out the better the flour suits our taste. The standard milling in England, since the conservation measures were put into effect, is seventy-six per cent, and the German and Belgian standard runs a little over eighty per cent. Understand, this seventy-six to eighty per cent flour has just as much food value to the pound as our seventy per cent flour. It is solely a matter of taste.

"The German and Belgian standard, besides its economy, has another advantage. On the English standard you can still make what food experts call 'bread de luxe'—such things as Vienna rolls, pleasing to the palate, and, therefore, an encouragement to overeating. On the German and Belgian standard you cannot.

"The by-product of our flour mills goes for cattle feed. Of course, if we begin high-grade milling, if we stop brewing, we shall have to find other ways of feeding cattle in order to keep up the meat supply. There are other ways—for example, utilization of pasturage, so commonly wasted in this wasteful country, and of our surplus corn.

"Since the wheat supply is limited, the European peoples have been mixing other cereals with their wheat flour—what we call 'war bread.' By saving ten per cent in milling and adding fifteen per cent of other cereals, we could save twenty-five per cent of the wheat. Indian corn, which we produce in abundance, makes one of the best mixtures ——"

I added my testimony at this point. In Italy, last year, I ate war bread, made of high-grade milled wheat and corn, for six weeks, and liked it exactly as well as the pure white bread I had been eating in France.

"That is my experience," said Jones. "Rye doesn't make a very good mixture. However, we don't produce much rye in the United States, though we should have a good deal of barley available if we stopped or limited brewing. But corn would be our national mixture. The famous potato flour of the Germans—wheat ground with dried potatoes—has not turned out well. It has a low nutritive value and is nasty stuff. As I have said, it is positive economy not to make war bread too palatable; but one can go to the other extreme. If it is really repulsive it loses some of its nutritive quality, because it doesn't get assimilated. That war bread incidentally has been one cause of German hatred for England. When the average German sits down to a breakfast of this stuff he remembers that it is the British blockade which has forced it upon him, which keeps the fires of hate alight.

"All the European food directors have found that it does not pay to raise the percentage of milling too abruptly. Both millers and bakers have to be educated. The bakery methods that would work with first-quality flour won't go at all for a high-percentage flour mixed with some other cereal. An abrupt lifting of the standard would cause waste by both bakers and housewives in the item of spoiled bread. A campaign of education must go along with any measures we might take.

"Here, again, we run against the Constitution. I doubt that we could accomplish this nationally—and it must be done nationally if at all—by direct Federal measures. But we can approach it, as we can approach the suppression of brewing and distilling, by the excise tax—put a prohibitive tax on the fancy grades of flour, and gradually raise the percentages until, if necessary, we have taxed out of existence all flour not milled on a high percentage and mixed with some other cereal.

"As for meat—that is just as important, in view of the shrinking world supply. The Europeans have experienced more trouble in reducing meat consumption than in regulating cereal consumption. The plan of 'meatless days,' enforced by Germany and other countries, hasn't worked very well. In experience it leads rather toward waste in household consumption than toward economy, though it does reduce consumption in public places. Ordinances forbidding anyone to serve more than one course of meat at a meal and more than two meat meals a day have worked rather better. They do not much affect the poor, don't reduce the nutrition of workingmen, and do bring economy into the big hotels and restaurants, and the large private establishments."

Inspected Meats

"Probably we can't get at this by Federal law, but must depend on the uncertainties of state laws, municipal franchises and propaganda. We can perhaps go farther with laws to prevent the killing of young meat. Veal, lamb and sucking pig, you know, have just about disappeared from the tables of Europe. Most nations have passed laws forbidding the slaughter of animals below a certain age.

"Something can be done by control of cold-storage houses, packing houses, and the like; in fact, if the Government should take charge of these establishments it could make a pretty good try at reducing prices. They are the prime markets for the farmer, and an intake price could be fixed as well as a selling price. The farmer would kick, no doubt; but the consumer would get some of his own from both farmer and middleman."

"To regulate this, with our imperfect social machinery—it's an appalling picture of muddle!" I said.

"Nevertheless," replied Jones, "we do those things pretty efficiently when we set to work. Do you know how well our system of government meat inspection has turned out in this war? Those government and relief buyers of Europe, who are not handicapped by absolute laws, contract for American meat without inspection—solely on the government tests. If you buy, in Chicago, ten thousand bacon sides of a certain grade on the government test, you get exactly what you bargained for. If you buy them in the Argentine Republic, or

Flour Facts

A poorer, cheaper grade of Pillsbury's Best is never sent out to catch the cheaper trade.

We absolutely refuse to lower the quality of Pillsbury's Best flour in order to meet a lower price.

The Pillsbury Flour Mills Company is staking its success and the life of its large business on the plan and policy of marketing but one, single, uniform, highest quality flour under its Pillsbury's Best brand.

No one, anywhere, can buy better Pillsbury's Best flour than you can buy. Pillsbury's Best is always the same—always Pillsbury's Best—everywhere—all the time—at the grandest grocery—or at the crossroads store.

We believe this policy will win in the long-run.

almost any other meat-producing country, you have to inspect the shipment personally or you will get a proportion of bellies and backs. Even after this war, there is bound to be a shortage of meat owing to the slaughter of breeding stock. The breeding stock is the capital of meat production and the young stock is its interest. The world has been breaking into capital.

"The value of animal food to a balanced diet lies in its proteids and assimilable fats. I think the great change in the world's diet during the next ten years will be the substitution of vegetable fats for animal fats. They have exactly as much nutritive value; in fact, the change has begun in Europe."

Dutch Nut Butter

"Take the case of margarine, or vegetable butter. The base is vegetable oil—mostly nut oil. Holland has been driving a thriving trade by purchasing nuts from British sources, making margarine, and shipping the product to England for sale. You know, people have got used to the taste of butter and demand the natural flavor in any substitute. That flavor is obtained without the use of chemicals by the Dutch method. The cream represents the animal fat in milk. Skimming and churning are only crude methods of extracting this fat and making it usable. When the Dutch butter is made the creameries have enormous quantities of skim milk—a by-product for which no very profitable use has been found. They add their vegetable fats to the skim milk, re-treat the mixture and turn out a product with the exact flavor of cow's butter. The only thing about it that could be called an adulterant is a little vegetable coloring matter. It has two advantages over cow's butter—it never gets rancid and it never carries disease.

"The ordinary palate cannot tell it from the real thing. I know a rich man in England who confided a secret to me: Ever since the war began he has been using on his table the highest-grade Dutch vegetable margarine instead of butter. He says that no guest of his has ever perceived that he was not eating good creamery butter. There is no comparison in price. English dealers have told me that they dare not sell margarine as low as they can, because the public would be suspicious of it.

"Our law provides that margarine cannot be sold as butter—it must be properly labeled. That is fair enough; the consumer has the right to know what he is buying. But we might remove the 'queer' on this really valuable food product by renaming it.

"Europe, under the pressure of war, is just beginning to get at some of the most useful vegetable fats. Here's a queer anomaly. One great privation of the blockaded countries is the shortage of soap, to make which takes vegetable fat, at present useful for food. The Belgian chemists knew that Indian corn, imported to dilute the wheat bread, contained three per cent of vegetable oil. By experiment they found, also, they could extract that oil without in the least impairing the food value of the corn! In the grain the oil is practically nonassimilable. Most of the Belgian soap is made now from this corn oil. The corn-oil-soap industry would bring about a great saving in animal fats and more valuable vegetable fats. This instance merely illustrates what we can do with vegetable fats.

"Sugar in sensible quantities is a necessary food; but in larger quantities it is the best-known tickler of the palate and encourager of overeating. It is comparatively bulky; and our supply, being mostly imported, takes much cargo space. In order to save sugar and reduce useless expense the Europeans have here and there prohibited the manufacture of confectionery, cakes and sirups, or certain articles de luxe in this category. Perhaps we could not and would not go so far. There is this to be said, however, concerning food regulations: Even the minor ones have an effect on the public mind; they call attention to the necessity and rouse a patriotic spirit.

"Probably we shall not get down to rationing unless this war goes farther and affects us more than I think possible just now ——"

"However, let's hear about it," I said.

"Well, that takes a great machinery and many agents, as the German and Belgian plans show. We've already discussed that.

"England until lately was repressing sugar consumption by rationing the retail dealer. Each was given a weekly or monthy supply in proportion to his trade in sugar, as shown by his books, before the war. He was not allowed to sell more than a certain quantity to each customer. Nothing in this plan prevents the customer from going from one dealer to another for a double supply; but, in practice, dealers, with their limited supply, tend to refuse these floating customers in order to keep on good terms with their regular customers. It isn't an extreme measure, but it works pretty well.

"The plan of household cards goes farther. If it is determined to control the sale and use of various commodities, like bread, meat, butter, and so on, the controlling authority issues to each householder a card listing the controlled commodities. The retailer must enter on the customer's card the amount of each sale, which is limited to a certain quantity in a week or a month. This quantity is not entered on the card, because food supplies vary from time to time; but it is fixed by proclamation. The card does bear, however, a statement of the number of rations to which the family is entitled. The authorities calculate, for example, on a full ration for a workingman, a three-quarter ration for his wife, a quarter ration for a young child, and so on. Restaurants and hotel supplies are fixed by calculating the number of customers they serve in a typical period."

The German Plan

"The German plan goes a stage farther even than that. Under the system I have just described a householder may buy in one day his supply for a week or a month. In Germany a purchaser must give the dealer, when he makes any food purchase, a coupon good for a fixed and carefully calculated quantity, and for that single day. On certain days coupons are not issued for certain foods—the meatless days, for example. Egg coupons, as all the world knows, are now good only once a fortnight. The retailers must turn in the canceled coupons to the wholesalers, who pass them on, in turn, to the governmental authorities. Wholesalers and retailers can get renewed supplies only on the basis of canceled coupons. To this is added a rigorous system of inspection. It saves more than the food-card plan I have just mentioned; but it is cumbersome and causes much friction.

"Finally there is the Belgian plan, most rigorous and economical of all, but inapplicable to any other country, owing to the peculiar conditions. As the whole imported supply enters Belgium through one organization, it can be controlled all along the line. It passes from central stores to local stores, from which the rations are distributed. Half of the Belgians are objects of charity. A large part of these are fed from public soup kitchens and canteens, where the most rigid and enlightened economy—especially in the use of meats—can be enforced. This plan is possible only in the last stage of national privation.

"We'll never come to that; but we should probably have to attack the food problem efficiently and scientifically within a year after we went to war, because the food supply of Europe will steadily shrink. Since all this is new to us, we should be studying European methods as a measure of preparation.

"That introduces another thing: Our official means of communication with Europe is weak. If we want to get a fact from Italy, say, or to arrange some small matter of agreement, we send word to our ambassador at Rome. Unless the matter is very important he assigns to the job a secretary, who calls on a secretary of equal rank in the Foreign Office. This Italian secretary, in turn, arranges the affair with the proper department and finally reports back to our secretary, who reports to the ambassador, who reports to the State Department, which reports to the proper department of our Government.

"When it is a matter involving consent or sanction of all the Allied governments it takes a process correspondingly slower and more complex. It is a chain. You can haul things out with a chain; but you can't push with it. What we need is a rod. In the event of coöperation with the Entente we must have a new department stationed abroad, headed by some man of cabinet rank, and staffed with experts on all the subjects pertaining to the conduct of this war. In the event of an understanding, our interests become at once their interests. They would be glad to give these experts all the advice and information possible. This is essential to a practical working agreement. It would not take away in the least from the power and prestige of our ambassadors and ministers. They have enough to do, as things stand.

"Well," said Jones, summing it all up, "we've been caught, without much social machinery, in a situation where we are up against the most complex and specialized social machinery—scythes against improved harvesters, or something like that. We've got to build the machinery; and our legal system—state rights, and all that—is rather in the way, I think. You can spin out possibilities all night. There are four million unnaturalized Germans and Austrians in the United States. They might make trouble, as a body; though very likely they wouldn't.

"However, individuals will. We may find it necessary to repress them. Internment of so great a number is impracticable. If they showed a tendency to disturb the peace we should have to limit their movements by ordaining that none of them should travel, without special permission, from the district where he was registered as residing. The European countries, largely as a result of conscription, have perfect birth and residence records. At any moment, and in the smallest town, the police could ascertain the nationality and birth date of all the persons in any given house. Guests at hotels, even, were obliged to give full statistics when they registered."

Beware of Half Measures

"Now I was born in a small American town; and I'll wager that to save myself from being shot as a spy I couldn't prove my birth by any record or document. We'd have to make these enemy aliens register, and we'd have to investigate every corner of the country to assure ourselves—without real means of proof—that they were obeying the law. To get the effect we want we should have to apply the penalties sharply for the first violations. Now the infliction of these penalties would be in the hands of local officials, with local feelings, prejudices and pulls. We simply could not get the sharp universal action necessary to control this situation with the minimum of trouble.

"And one thing more," concluded Jones: "Paradoxical as it may seem, we shall do best for democracy if we make our regulations of all kinds strict rather than easy—if we lean to the side of a rigorous control while the emergency lasts. Every democracy has realized that in time of war there must be some kind of centralization. Some man or group of men must take nearly absolute control of practical measures, because in the speed of events there is no time to govern by a force as slow as public opinion. When the war is over democracy wants to go back again to the fullest practical measure of personal liberty.

"Now any democracy has its enemies from within—the people who want to make themselves an oligarchy of blood or money or position. If we adopt half measures, not noticed as especially galling in the general anxiety and discomfort of war, then people may succeed in keeping them in effect when the war is over. Full measures, strong enough to hurt, produce a reaction; when the war is over the people insist on abolishing them entirely."

"America's Greatest 'Light Six'"

HAYNES

"America's Greatest 'Light Twelve'"

"Light Six" Roadster: $1725

"Light Twelve" Roadster: $2225

The Prettiest Roadster in America

Note, by the seating dimensions in *inches* given above, that the *prettiest* of roadsters is likewise the *roomiest!*

"Six-footers" find spacious havens for lengthy limbs in this, the *roomiest* of four-passenger roadsters. The broad aisleway between the comfortable club-chairs in front relieves stouter folks of all inconvenience.

A *chummy* roadster—yet not *over*-chummy. Built upon a seven-passenger touring chassis of 127-in. wheelbase.

Deep, yielding upholstery. Big, comfortable rolls over the backs and sides, supported by thin, flat springs.

All late mechanical improvements. And yet, in power-plant and principal structure, basically the same as Haynes cars which over 15,000 motorists during the past three years, have driven in excess of 100,000,000 miles.

Carrying spaces beneath all seats. A large rear compartment for suitcases. Demountable tops *(extra)*.

Lowest cost per mile on "*gas*," oil, tires and repairs, of any comparable cars. Owners' records prove it. Long life a certainty. A model which will never grow *passé*.

Demand for Haynes cars always exceeds the supply.

Early inspection, and prompt ordering, urgently recommended!

Catalog of Haynes "Light Six" and "Light Twelve" models—with name of nearest representative—on request.

THE UNPRINTED TRADE-MARK

SOME call it distinction. Others term it individuality. And a few brand it as a brazen disdain for the venerable conventions.

But name it what you will—there is a "flavor" about Royal Made-to-Measure Clothes; a certain "personality imprint" that carries its own copyright.

This character manifests itself in every detail of Royal Service; even in the very packages in which it delivers its goods.

You will find it expressed in the workmanship of Royal buttonholes and in the intelligent courtesy of a Royal Tailor Merchant; in the *savoir faire* of a Royal fashion and in the broadness of the Royal satisfaction-guarantee.

You will find it in the styling and stamina of Royal woolens; in the fine perfection of Royal stitching and seaming; and in the absolute fidelity of the Royal Six-Day Schedule delivery service—with its forfeit of $1 per day for each day of delay.

You might call it our "unprinted trade-mark"—sort of a spiritual identification tag. But it identifies Royal Tailoring as definitely and as exclusively as *your* thumb print identifies you.

"They do things so differently" is the common comment of discerning clothes critiques when speaking of this service.

Take mirrors for instance

IT is very difficult to polish mirrors, glazed ware, silver or similar articles if an oily film of soap remains after the washing.

Ivory Soap is especially suited for cleaning pieces of this kind because it is neutral and entirely free from unsaponified oil. Comparatively little rinsing removes every particle of soap, leaving not a sign of greasy gloss.

After Ivory's use, any article is not only clean in the sense that it is free from dirt, but it is clean in the stricter sense that it is free from everything which might spoil the effect of the final drying and rubbing.

BEFORE you house-clean, send for this free book. It tells you how to clean many of the things that ordinarily cause the most trouble at house-cleaning time. Ask for the "Unusual Uses Booklet" and address The Procter & Gamble Co., Department 25-D, Cincinnati, O.

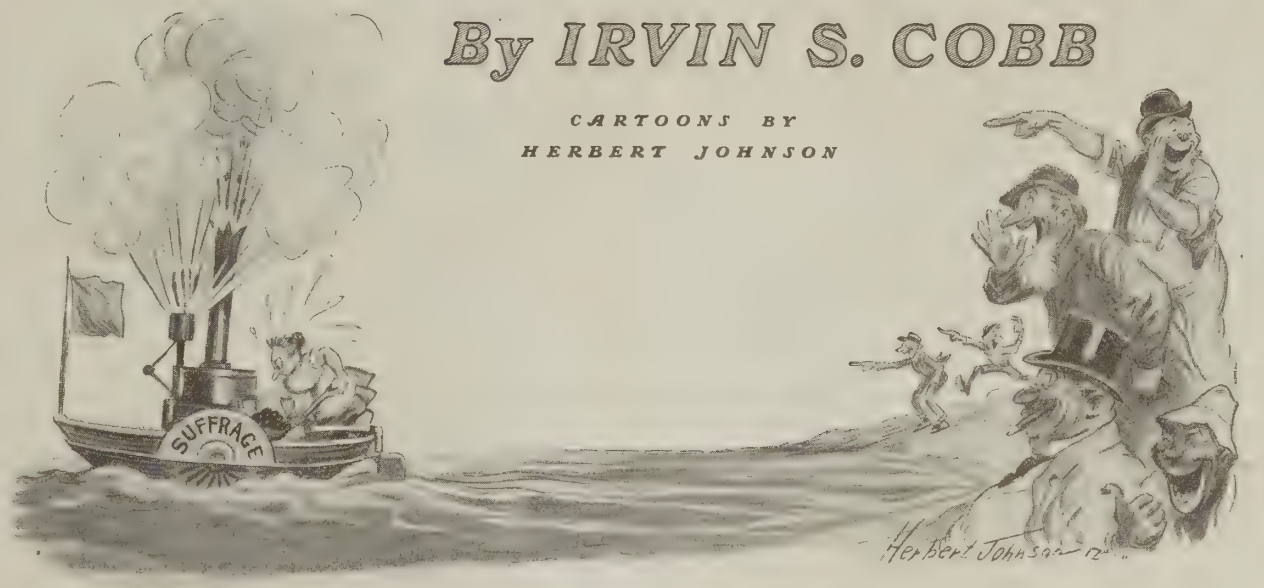
THE TITHE THAT BINDS

By IRVIN S. COBB

CARTOONS BY
HERBERT JOHNSON



Can You Not Hear Them at Their Scoffvereins?

AN EPOCH is something to which we look forward before it has happened and something upon which we look backward after it has happened, but which, as a general proposition, creates no great amount of excitement while it is in the act of happening. The same is true of an era, except the era occurs on a somewhat more extensive scale than the epoch; at least, that is my understanding. As I figure it, two small epochs constitute one medium-sized era.

Epoch or era, big epoch or little era, I imagine—if only the truth were known—that the attitude of mankind toward the really important transformations and the really significant evolutions has always been thus—a lot of skeptical surmise beforehand, culminating in a perfect ground swell of derisive speculation on the eve of the transpiring of the thing, and subsequently a flood of that sort of hero-worship which changes yesterday's crank into to-day's genius and to-morrow's immortal. But in between these, spacing them off like the intermission in a two-act drama, occurs a period when the event, having been accomplished, is accepted as a matter of course.

We have it on excellent authority that when Fulton undertook to run the first American steamboat up that classic stream upon whose banks the imperial state of New York has since established three of its largest institutions for the care of its incompetents—Sing Sing prison, Matteawan asylum and the Capitol at Albany—the leading citizens of those days gathered along the shore in pleasant anticipation of witnessing the complete discomfiture of the deluded inventor and, haply, of being within sight and hearing when his insane contraption should explode and plaster its creator in small, minute fragments against the seamed face of the towering Palisades. Can you not hear them at their scoffvereins?

"What do you think, Neighbor Van Hoosen—the poor, demented wretch actually believes he can propel a craft against current and tide with the aid of steam! With steam, mind you—the stuff that comes out of the spout of a kettle when the water boils. Of course steam is all very well in its place. It is eminently suited for a cow to use for breathing purposes on a frosty morning, and under favorable conditions you can cook an egg with it; but when it comes to making condensed hot air do the work of oars and sail—well, it takes all kinds of people to make a world, doesn't it, including the lunatics?"

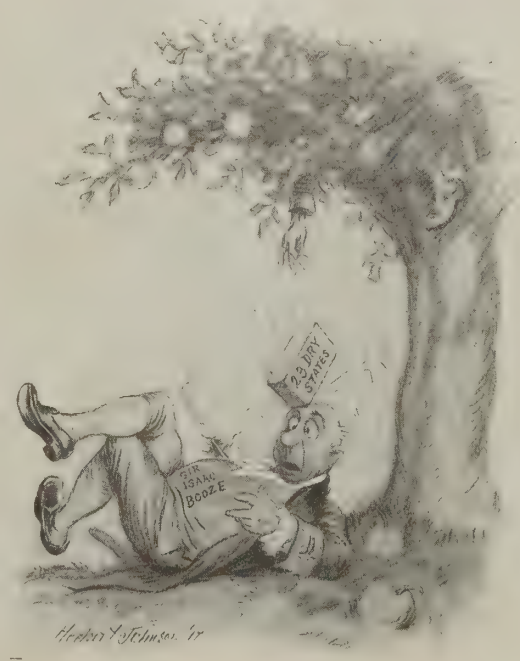
The First Martyr to Rapid Transit

"WATCH now, neighbor, watch closely; he's preparing to try to start. There now, what did I tell you? The thing doesn't move! It's just as I expected; only yesterday I was saying to—— Say, look, the creature is going to try again. Well, well, well, it did move that time, didn't it? See, it's going away from land, and right into the face of the wind too. But there must be a trick about it somewhere. I'm not prepared to believe it—yet."

With their eyes popping at the wonder of it, they followed the progress of that first steamboat journey; probably the second time they still followed it, but with an abating interest. By the end of the week we may safely figure them as having lost interest; doubtlessly before the month was over they scarcely turned their heads to see the Clermont churn by; and after that, upward of a century must pass before definite steps were to be taken to perpetuate the memory and to commemorate the achievement of Robert Fulton.

It will be recalled that on the day Stephenson made his locomotive to travel, as a public demonstration, it struck and killed one of the spectators. Lacking definite information as to the details, I still am ready to believe the victim of the tragedy had stationed himself between the rails in front of the locomotive, choosing that post as the safest possible place, for the purpose of pointing out the utter fallacy of expecting that cumbersome, awkward-looking thing of iron and wood to move an inch unless they hitched coach horses to it and towed it along. He was the first martyr to rapid transit; also he was a sacrifice to a mighty common human attribute.

Benjamin Franklin, devising the Franklin heater, must have been deservedly popular among his frostbitten and chilblained fellow citizens; but Benjamin Franklin, going forth on a stormy evening with a boy's kite and the brass key to the henhouse door and snaring a bottle full of lightning, was undoubtedly charged by some with impiety for daring to trifle with the mysterious forces of creation, and by others was held up as an object of derision—just such an object of derision as were two brothers named Wright, out in Dayton, Ohio, here only a few years ago, when they persisted in frittering away their lives studying the flights of birds and tinkering on a madman's mechanical dream of wings and springs in their woodshed, when they might have been cleaning up their comfortable twelve hundred dollars a year apiece running their bicycle repair shop. Sir Isaac Newton, sitting under his orchard tree waiting for an apple to fall on his high intellectual forehead, so that he could discover the attraction of gravitation, is to posterity a noteworthy figure; but one feels sure at the time folks all over the neighborhood commented acidly upon the fact that he was wasting a lot of valuable hours which he might better employ in helping Mrs. Newton with the housework.



Discovers Laws of Considerable Gravity

When Crises Bloom on Every Sunny Lea

THE greatest tragedy this world has ever known began something less than three years ago; it has been going on ever since and it goes on with ever-increasing hideousness and horror to-day. Beyond question our grandchildren will commiserate us—yes, and envy us too—for having lived in the historic period while civilized warfare, so called, was being conducted on a more elaborate and a more terrible and a more devastating scale than ever before; but how long did it take us, on this side of the ocean, to get used to it and to accept it, with all its slaughter and all its waste and all its misery and its sufferings, as an accepted and, in the main, a monotonous fact? Was it a year? Or was it six months? Or was it six weeks?

Human nature being what it is, now as heretofore, it is to be expected that some persons may take issue with the statement here modestly set forth, that in this country we are either passing into or just emerging out of a most radical and important stage in our national existence. One does not mean that we are being transformed politically. An era, more or less, is nothing to a politician, whereas a crisis is everything, and more especially in a campaign year when the crisis, like the crocus, blooms on every sunny lea. As the present writer sees it, this transmogrification, which even now is in process, has nothing to do with politics except incidentally. But it does bear upon and affect us all, locally and nationally, separately and collectively. It marks—if one may make so bold as to venture an assertion so broad and so sweeping—the vanishment of the United States of America, as most of us have known it, and the ushering in of another and a different United States of America; different in its systems, in most of its internal economies and in a good many of its external aspects.

The old United States is going into the discard; some think it already has gone. We are fond of bragging that our ancestors

The Law Will Continue to be Faithful and True to Moss-Covered Precedent

of two or three or four generations back, the pioneers and the pathfinders, were a hardy race. It is perhaps boastful to say this, but there is truth in it. They were a hardy race; they just naturally had to be to live through the things they did live through. Even so, hardy as they were in most respects, it is a question whether those stalwart forefathers of ours could have endured conditions—and pleasures—which we moderns cheerfully endure.

The founders of this republic defied wild beasts and epidemics, floods and famines, freshets and forest fires. They weathered contagions and plagues. They bested the wilderness and the savage. They got along without plumbing, without decent roads, without means of communication, without conveniences and without comforts as we know comforts and conveniences to-day. Sometime in his life great-grandfather expected to have the smallpox. Either it killed him or it left him with a face like a colander. But would you care to make an estimate as to how long he could keep his health and his nerves if he were translated forward into this year of grace nineteen-seventeen and were called upon to follow the high-pressured daily program of the modern business man or professional man and then to spend his evenings at the opera, the cabaret or the all-night restaurant? Under such conditions, can't you just see the old gentleman's iron constitution rusting round the edges and finally going all to pieces, with a low, clanging sound?

To-day's Hysteria Makes To-morrow's History

IF OUR forbears' lines were cast in simpler grooves and their habits in more primitive settings than ours, it is quite as certain that their institutions—sentimental, political and social—were more enduring and more durable than ours are, even though they did live in that period of an acute and startlingly rapid transformation when this continent was being hewn out from a howling waste and shaped into an ordered and orderly domain. Their standbys lasted them better than ours last us. Consider the items of their political ideals in even so recent a period as the eighth decade of the century last past. Some among us who still fancy ourselves to be on the sunny side of middle age yet can remember when a campaign issue was a reliable and a staple thing, which stood up from campaign to campaign—instead of changing overnight, as has been the case since we became, or fondly fancied we became, a world power, with our national problems complicated not so much by what happens inside the boundaries of our own nation as by what happens outside and beyond them, hundreds or thousands of miles away, in the larger theater of world events.

There was the Mormon question, which was wont to bob up regularly every four years. The Mormon question was directly responsible for the conversion into a political shibboleth of the proverb "Two's company, three's a crowd." I remember they used to print pictures in the paper with a view to proving that the family tree of at least one of the founders of the Church of Latter Day Saints in Utah looked a good deal like a chart of the circulation of the blood. The trouble with the early Mormon was that he lived too soon. A good many millions of his fellow Americans opposed him because of his ideas of what constituted a happy family; they believed his domestic arrangements were entirely too elaborate. He thought a man should be allowed to have all the wives he wanted at one time; whereas, these days, thanks to our liberal and accommodating divorce laws, it is possible for a man to have all the wives he wants, one at a time.

Another permanent standby was the Bloody Shirt. For thirty odd years it was unfurled to the air in every campaign. It was daily bread, and pie on Sundays, to many a full-lunged patriot—the Bloody Shirt was. It continued to wave much longer than it had any right to wave, and this, I take it, was because Americans of a preceding generation were wedded to their political traditions and loath to forsake them. No longer ago than last fall an effort was made to dig up the Bloody Shirt from the graveyard of dead animosities and dead sectionalism where it slumbered; but the resurrectionists made a grievous error. The late unlamented had become a moldy remains. It was not potent to frighten the children any longer. It did not frighten the white children up North nor yet the colored children down South. So they relaid it to its eternal rest.

And then, of course, for a backbone to every campaign argument, there was the dear old, dependable old, tiresome old Tariff. When in doubt the spellbinder, standing there in the forum or on the stump, with one eye on the Starry Flag and the other on the main chance, fell back on the Tariff. He was on safe ground then, safe and very dry. It was a mortal certainty that nobody in the audience knew any more about the Tariff than the speaker did; and anyway, figures always were formidable, if only you quoted enough of them.

The point I have been trying to get at through all this retrospective part is that the day of the dependable and staple political issue is gone, and in its stead we have the era of the made-to-order issue, the here-to-day-and-gone-to-night issue, the will-o'-the-wisp issue which flickers a bit and then dies down and is gone out, leaving not even the ashes of remembrance behind it. Once in a while, indeed, the issues become so shreddy, so gossamer-thin and fairylike in their texture, that the first heat of the campaign burns them up altogether, as was the case in 1916, so that for the voter the main question resolves itself into a matter of drawing fine distinctions as between the personal and temperamental qualifications of the opposing candidates. Their political issues—meaning our grandsires'—blazed like beacons along a coast, with a ready and willing partisanship to feed and fan the flames; ours mainly glow spectrally, like a fox-fire in a swamp. It is the difference between having inflammatory rheumatism as a chronic complaint and a touch of malaria just once in a while.

Even so, we seem to be as prone as were our immediate ancestors to grow terrifically excited over political and sociological problems—even more proneful, perhaps, than they—but I do not believe we stay excited for so long as they did; we do not seem to have the patience to work out the propositions to their reasonably satisfactory or their reasonably unsatisfactory conclusions. We are exhausted before the topic is; we leave it half baked, to knead up a fresh batch of dough. Without in the least desiring to be pessimistic, and being firmly committed to the belief originally advanced by Uncle Joe Cannon that this country is turning to be quite a success, it, nevertheless, appears to one as a self-evident fact that whereas those old fellows—our country's founders—were frequently concerned with making history, we are fairly well content to be making hysteria. To be sure, the molten hysteria of to-day may be transmuted by the alchemistic processes of our national chemistry into the fluxed and molded history of to-morrow; but all the same we seem to have developed a propensity for getting ourselves tremendously and tumultuously worked up over something this week, only to forget it absolutely next week or next month.

A Recent Kite-Flying Experiment

It may be, as some students of our sociology and our ethnology have pointed out, that this tendency is due to the recent considerable infusion of volatile and emotional racial blends—notably the Latin, the Slavic and the Semitic—into the more stolid and less demonstrative strains that formerly made up the bulk of our breed; but, speaking personally and from the heights of a perfectly monumental ignorance, I would not care to hazard a theory as to the cause; the effect speaks for itself. As these savants contend, it may be due to the polyglot amalgam of bloods that we are becoming; it may be the climate; or then again it may be the war in Europe. You may have noticed lately that when we are uncertain about the reasons behind a thing we just fall back on the war in Europe, and let it go at that.

More Luxurious and Less Comfortable

UNDERLYING this top-water emotionalism, though, and extending far below this tendency to be boiling over one minute, simmering gently the next, and in the third coolly and placidly waiting for some new blaze to be kindled beneath the national melting-pot to set us all to bubbling and frothing again, are working certain movements and certain motives which undoubtedly are assuming certain concrete forms. If we watch closely we can see them being forged to definite shape and firmness. The old, loosely organized, easy-fitting, individualistic, baggy-seated Americanism is disappearing, and out of the nimbus of its thinning shadow is emerging an organized, specialized, centralized spirit of nationalism which manifests itself in business, in social lines, in governmental policies, in the tax office, in the counting room, in the club and, of course, in the home. We are making our life over to be more luxurious than ever it used to be, but less comfortable than once it was. It costs the well-to-do citizen more to live than formerly it cost him, and the chances are when he casts up he may decide that life isn't quite so pleasant a thing as it was in those old and less complex days. The joy ride has the thrill to it, but the hay ride was safer.

Furthermore—and this also might properly be diagnosed as a pronounced and characteristic symptom of the new national contagion—there is a disposition, which increases rather than abates, for classifying and grading the people; for grouping them off into definite castes and sets, for marking the cleavage fissures of the social strata with trespass signs, for alignments along the edges of least social resistance. At this time of writing, along the North Atlantic Seaboard, if nowhere else, we have an Upper Class—pronounced with the broad *a*—and a Lower Class—pronounced without it, as distinguished from the not very remote period when most Americans were proud to proclaim themselves as members of the Great Middle Class. It is not so remarkable that there should be one of these groups; but it is remarkable that the other should be. In New York and Boston and Philadelphia, in Richmond and Charleston and Savannah, and in sundry other cities, there have always been persons who freely admitted that they themselves belonged to the Upper Class; the really significant thing about the aspect of the present situation is that one now occasionally happens upon a weird example of the human species who is willing that he or she be assigned to the Lower Class, and having been so assigned, to regard himself or herself thereafter as having been properly

(Continued on Page 47)

MRS. HOPE'S HUSBAND

By Gelett Burgess

ILLUSTRATED BY HENRY RALEIGH

WHO was she? Just another of the smart and daringly gowned guests invited by Mrs. Woodling? As she sauntered across the wide drawing-room floor, laughing and trifling so nonchalantly with her escort, her careless scarf artfully trailing off a white shoulder, all eyes followed her. Bored stiff gentlemen awoke; laughing ladies suddenly ceased their chatter; some of the more discerning began to wonder. Who was she? Wasn't she almost too charmingly distinguished for a mere millionaire? But when, fine eyebrows lifted, she held out a graceful, white-gloved hand and exchanged the first bright smiles with her eagerly welcoming hostess—no longer was there any question about it. Indubitably she was the lion of the evening.

But the gentleman who accompanied her, so tall and dark and picturesque, so gracefully erect, with that queer unreadable smile—was he famous too? By the fine intellectuality of his face—yes, possibly. And yet, aristocratic and interesting though he seemed, wasn't he a little ill at ease? That defensive reserve—wasn't it somewhat overdone? Alas!—probably not a celebrity. Feminine eyes were already deserting him. As his bland, bejeweled hostess greeted him with her second-best smile—oh, no; certainly not a celebrity. Only a husband. Glances, disappointed, returned to the lady.

Round the elaborately paneled room, the gilded, mirrored room, frescoed, columned and Louis-Quatorzed, the guest-of-honor's name came out in whispers. "Mrs. Hope," the inquisitive rosy débutante murmured to her lorgnon-peering, white-haired-dowager mamma on the gold settee. "Why, you know—Pauline Hope, the novelist!" Aigrettes nodded, jewels flashed, pink powdered shoulders leaned to crinkling white shirtfronts. "Yes, yes; of course! She wrote that wonderful, romantic—why, what is the name of it, now? . . . Stunning, isn't she?" And before the flutter had subsided Mrs. Woodling, expensive and expansive, had bubbled through the first effervescence of her amenities; proudly she had passed her prize along. "A rare exotic curiosity of my own private collection," she seemed to smile. "Inspect! Admire!"

"Oh, I just loved it, Mrs. Hope!" virginal voices petted her. . . . "Perfectly fascinating!" . . . "So adorably romantic!" . . . "Oh, it must be simply wonderful to write!" How the blue eyes beamed! . . . "I suppose it just drips off your pen, Mrs. Hope, doesn't it?" . . . "Oh, I do wish you'd put me in a book sometime!"

And thus, as one after another flatterer was brought up to talk with Mrs. Hope—or talk at her—and her husband, elbowed aside with careless "Beg pardons," gradually edged off toward the wall—the season's literary favorite graciously accepted her homage.

How smiling she was! How affable! As Pauline Hope, the novelist, she may have winced at times as the inevitable glib inanities gushed for her; but Pauline Hope was not only a novelist, she was a woman. Any shrewd observer—such as her frowning, proud husband, for instance, seeing what only a suffering lover can see—might have suspected that this first full taste of social success was refreshening her very soul. With what zest she was throwing herself into the part of handsome-and-accomplished—with what modest depreciation, too, of her fame!

But if her pose was woman-easy, her husband's obviously was not. High though his chin was held—suspiciously high, even—he withdrew more and more into himself as he withdrew from the ignoring crowd. Almost cynically he watched her, until at last she was captured from the Philistines by a pair of enormous tortoise-shell spectacles and a pointed beard. He smiled as the editor, Peever, the classic stoop-shouldered Peever, claimed her as his lawful prey; for in that crowd even Peever could not hold her long. From the atmosphere of diamonds and dollars she was soon borne away in triumph to a rarer, loftier air, breathed by an inner circle of intellectuals, birds of a still finer feather. These, as ambitious Mrs. Woodling fondly cooed, had all "done something," and here Pauline Hope was henceforth to shine.

Over her bared white shoulder "Follow me, Lester; follow!" her backward questing glance had seemed to call. Oh, yes; she wanted him, no doubt. But what, in the name of all these snobs and toadies, was the use? Well he knew, by this time, what brand of patronage to expect of them. He was sensitive, he was fine-grained—and he was married to a celebrity. He was "Mrs. Hope's Husband!"

In the companies where they had appeared together since her first public recognition he had, so far, endeavored to hold his own with dignity. But now his pride had begun to revolt. This evening, as he was removing his coat upstairs, he had been introduced to a bearded and spectacled professor only to hear: "*Ach!* Mr. Hope! Not de huspant of our so-distinguished friend, Pauline Hope, de novelist—yes?"

He still loved his wife; he was proud of her success. But that he himself should have to pay for it so dearly he had never anticipated. Why should he submit any longer to being treated as a nonentity? Nonentity! Why, wasn't it worse even than that? To-night he couldn't be even simply Lester Hope. Other men, respectable and otherwise, with brains and without, seemed here to be willingly accepted at their face value. He, however, with a professional record of which he was nowise ashamed, was only "Mrs. Hope's Husband!"

Yet, while he was present at such congregations of tuft-hunters, escape seemed impossible. Even as he stifled his pride and brooded, nervously twisting his mustache, watching the universal adulation of his wife, Mrs. Woodling, like a somnambulist, glassy-eyed, obsessed with a fixed idea, was bearing magnificently down upon him, with a large lady in tow. Stoically he waited.

Ah, yes, it came: "Mrs. Poppity, I want you to meet 'Mrs. Hope's Husband!'" The blow accomplished, his hostess, smiling—oh, so sweetly smiling—slipped away.

The round-eyed matron in black satin was as soft and silly as only a huge woman in black satin can be. Fan lifted, gazing at him dreamily, "And what do you do, Mr. Hope?" she breathed. "Ah, something won-derful, I'm sure!" And then, waiting for no answer, her round near-sighted eyes rolled away to the other side of the crowded room, where Pauline reigned.

Lester Hope looked at her, and looked in no kindly mood. Said Lester Hope: "I'm an attorney at law."

"You Were Surrounded by Admirers, and I Could Not, Would Not Force Myself on Your Notice!"

Said Lester Hope: "I'm an Attorney at Law"

Surprised and shocked, the round eyes suddenly returned, as if for explanation of a jest too subtle for her brain; and then, embarrassed, she began to prattle very hurriedly. But when she got down to rheumatism and the weather he finished her off with the excuse that his wife was again beckoning him, and, if Mrs. Poppity would pardon him, he really must —— As he left, her relief apparently was as large as his.

Toward Pauline, however, he did not, could not go. Under the sparkling crystals of a chandelier, surrounded by men, he caught sight of her, flushed and radiant. A shock of musical black hair was being emotionally shaken beside her; she was attended by Poetry—with a broad black-silk ribbon depending from his eyeglasses—as she collogued Drama, fierce in a red mustache, and dry, whiskery Architecture.

Lester watched her pensively. Well, she was happy; she had "done something." Delightedly she was receiving the Right Hand of Fellowship as a newcomer to Fame. There he, too, should be, longed to be, with those choice spirits, the brains of New York. But be with them as a mere appendage he could not. He had no "tag" to his name—except that humiliating one which still rang in his ears like the tin can on a dog's tail—"Mrs. Hope's Husband!"

Wherefore, his pride compelled him to lurk on the ragged edges of intellectuality, the limbo of half-wits.

From the pompous prattle of a lank youth, who would criticize plays—but couldn't write them—and a jolly big broker, with a gold tooth, who had just published an almost-original Life of Napoleon—at his own expense—he turned resignedly to sip the pale graces of Helen Ramsay, a mildly literary friend of a certain age—the age that has known one at college and feels privileged to whisper:

"I say, Lester; we never thought, in those days when you were an editor carrying off all the prizes, that you'd have a wife who'd be more famous than you were—did we?"

Mrs. Woodling, however, was one of those busy hostesses. It was against her principles to let anyone linger long with a congenial soul; wherefore Helen's green earrings and lavender and lace were soon escorted away through the throng to meet a more appropriate guest.

Lester Hope nursed a sardonic smile. It was quite all right, of course. What damned him apparently among these New York ink worshipers was merely that his name was not printed in the papers or between covers. What were the intricate cases he had argued before the Supreme Court compared with her few magazine stories? Could his reputation at the bar hope to compete with the thrill of her elderly lovers, and meek self-sacrifices and mistaken identity? Helen Ramsay, of course, was "famous." She "really must meet" What's-his-name!

"Oh, Mr. Hope!" came a thin feminine voice in his ear. Ten thousand dollars' worth of emeralds confronted him, strung on a skinny neck. An aged head was grinning. "How proud you must be of your wife to-night, Mr. Hope! Such a privilege, I'm sure, for us poor matter-of-fact souls to be associated with Real Brains!"

And it came out, in smirks and simpers and amiable wrinkles, that My Daughter Pearl was also literary, Mr. Hope. She, too, had real brains. It was, oh, it was too bad, Mr. Hope, that he couldn't have heard a paper that My Daughter Pearl had written for our Fortnightly!

Held by her emeralds and her eyes, he was rescued only by Supper; and as the faint odor of sizzling lobster called her joyously away another provocative perfume brought its message to his own nostrils. So, toward the altar of masculine peace he wandered, musing his insignificance, to burn his incense at her shrine whose aromatic sweetness makes all men brothers.

In a remote corner of the billiard room, where a few men almost as disconsolate as he were fingering their watch-chains and yawning sulkily, he sat down to inhale, with his cigarette, a few pungent truths.

Was it possible that he could be envious of the attention his wife was receiving? Conscience indignantly answered "No." To be sure, he had some contempt for the silly fulsomeness of the tribute paid in such places as this to literary achievement; but if Pauline, a little romantic in her illusions, cared for that sort of thing—well, hadn't she honestly earned it? But why—why should he be made the sport of fools? Potentially, at least, he considered himself quite the intellectual equal of any of those whom his wife found so brilliant and "Really worth while, Lester!" Not a whit was he overpowered by the roaring lions of the Woodling salon. What, then, was wrong? Half amused, half contemptuous, he glanced about at the burlesque side show of Mrs. Woodling's intellectual circus.

Across the room cards flipped on a table, and someone said "Hearts!" But the man beside Lester still gazed silently at the portrait of a dead pheasant on the wall. Beyond him other moody gentlemen were lost in their high balls.

He couldn't understand it. Why, he had never been left out of it like this before! He had never failed to be sought and welcomed—much less failed even to be considered. What was wrong?

From where Lester sat he saw, slantwise through the portières, a strip of the flowery red-velvet hall, where violins sobbed plaintively to an accompaniment of babbling voices not at all plaintive, as brilliant couples passed and repassed. Suddenly, for one bright moment he saw—Pauline!—Pauline, in her gold-hued silk, lovely with pearls, smiling up at a handsome blond portrait painter with a Vandyke beard. She looked about a moment, as if for her husband—and was gone!

How vivid she was to-night, gleeful with victory! But as he sat there smoking reflectively his mind drifted off to another world—to those days before Fame had found her. . . . Hadn't she been even more adorable then? . . . That little pink dimity frock! . . . How proudly she had told him: "Only seven cents a yard, Lester!"—and she had made it all herself! . . . Pauline Forr! Romantic, engaging Pauline-of-the-Violets! . . . How rapturously she had seized them from his hand that day! "Oh, Lester! Think of it, Lester! Violets in January!" How she had kissed them.

"Oh, you darling little rascals!"—kissed them; kissed ——

"Damned bore!" grunted the man beside him, lighting still another cigar. "Lord, I despise these confounded affairs!"

The shrugged shoulders of Lester Hope indorsed the sentiment.

"Lots of good-looking women, though. Here, waiter; bring me another Scotch. Say, that Mrs. Hope's rather clever, I expect, ain't she? Pretty, anyway. Meet her?"

"Oh, yes." But Lester Hope's cigarette had accidentally dropped.

"What's her husband like? Know him?"

Lester hesitated:

"Oh, yes—fairly well."

Uncomfortable and alarmed, he had started to rise to make his escape; but the man was holding him with a twinkling alcoholic eye.

"He must feel pretty cheap, I should think, tagging along after her. Here; try one of these cigars." He yawned behind his hand. "Lord! If my wife had beat me out like that, damned if I wouldn't stay at home!"

Twisting his perfecto in his mouth, he began to chuckle.

"Say—reminds me of what a vaudeville-team fellow told me about once. Wife used to do a heavy acrobatic stunt, and practiced seven hours a day; earned two hundred a week. Mr. Husband stood in the wings for twenty minutes twice a day, handing her the 'props.' Then he'd go round to the nearest saloon and brag about 'Our Act!'" Poking Lester in the side with his thumb, he added: "Say, this chap Hope's probably about like that—eh?" He laughed reflectively, unctuously.

As a horrified guest plucked at the joker's sleeve and whispered something which made him sit up and mutter "He *is?*" Lester Hope retreated to the drawing room, blushing hot with shame, but at last thoroughly awakened.

He had his answer now. Why, if he had grown so negative and insignificant that a man could assume from his mere appearance that he was a nobody—well, he must have fallen a good deal below par. Why should he have crawled away and hidden among these Merely Husbands? What the devil had he, Lester Hope, to be ashamed of? Wasn't it manlier, after all, to swagger about "Our Act!" than to sneak off with his tail between his legs? Yes; he was making more of a fool of himself than they were of him. Either he should swallow his infernal pride and be honestly, openly proud of his wife, or else stay decently at home and let the Mrs. Poppitys of this foolish bookish world forget him.

And, before he had left that swarming house that night, that was what Lester Hope had firmly decided to do.

II

"MRS. HOPE'S Husband!" For days, to the confusion of every other idea, the phrase had rung in his ears. "Mrs. Hope's Husband, Attorney at Law," he seemed to read at the top of his office stationery; and at the bottom he had all but written: "Yours truly, Mrs. Hope's Husband." Every book store he passed called out to him: "Mrs. Hope's Husband!" That miserable ghost of his mortified self had worked and walked home with him. Nor did it leave him even there. Once the key was turned and the door of his smart little Georgian house, opening, showed the hall, trim and elegant with its white woodwork and curling stairway, lo, the specter was ready, awaiting him!

That specter, seated mockingly upon the floor, was a huge package wrapped in brown paper. It was the regular fat monthly offering of books from Peever, her publisher, addressed to "Mrs. Pauline Hope." But why the devil not "Mrs. Lester Hope"? he questioned sulkily. On a tray was the usual pile of letters. The envelopes were almost all addressed also to "Mrs. Pauline Hope"; as if, indeed, she were already a widow!

"Her Husband Must Feel Pretty Cheap, I Should Think, Tagging Along After Her"

Depressed, his aristocratic appearance already a little dimmed, he went into the long, low library. Those rows of books and books had often sheltered him in a port of peace. But to-night his own books reproached him.

Sighing, he listlessly took up the evening paper. His eyes, after a while, fell upon the Society Notes. Yes; there it was! At the very end of a list of "those present" at the Woodling reception he read: "Miss Helen Ramsay, Mr. Saul Tremlett, and Mr. L. Hope—the husband of the distinguished novelist." The paper sailed across the room. Surely it was high time for him seriously to consider his problem.

"Mrs. Hope's Husband!" He—Lester Hope! Long he sat and pondered it. He, with his high pride—a mere possession! How had he ever become so negative, he who had so often been called magnetic?

Was it just another of the many comic tragedies of the too-early marriage—one partner going on and the other lagging behind in arrested development? Bang! His fist came down on the table. No! Downtown he was positive enough. Men respected him, admired him; and women had shown him favor. He felt strength in him. He was not one of those timid mortals whom success had never touched. At college, in the polo field and before the bar he had proved it. Yes; in his own way he, too, had won. But he hadn't happened to win in hers.

Spontaneously out of the past a picture came—a day in their first suburban home when she had been so happy that she had been almost afraid it might not last. With what devoted courage she had said:

"Promise me, Lester—let us promise each other that if the time should ever come when our love changes—ever so little—we will be honest with each other!"

Would that time ever come? Was it, perhaps, even now well on the way? Could this new success of hers possibly separate them? And if it did would she be honest? Would she tell him? . . . Like a warning, the ringing, ringing of a bell awakened him from his reverie.

"Hello! Yes. . . . Yes." He had gone across to Pauline's desk and taken up the telephone. "No; she's not at home yet. . . . I don't know. . . . Yes; probably." Then his face clouded and he smiled bitterly. "Yes; this is 'Mrs. Hope's Husband.' . . . Very well, Mrs. Tremlett—when she comes in."

The receiver struck the hook with a whang. Even in his own home he couldn't escape!

Well—his wife, he recalled, was that afternoon reading from her own "Works" at some precious woman's club. There was, as usual, "something on" for the evening—something of Peever's contriving—with people, of course, who had "done something." But Lester Hope had decided not to be there; and he anticipated a rather bad quarter of an hour, breaking the news to Pauline.

After she had come laughing home, however, and with an impulsive kiss had joyously invited him up to her pretty feminine blue-chintz room while she dressed—combing, manicuring, gossiping of her female adorers of the afternoon, her lips saying "Oh, but Lester, those women were too absurd, really!" while her eyes were confessing "How I love their praise!"—he found his excuses for his absence that night accepted, as she gazed at herself in the mirror, with a careless "I'm so sorry, dear, you can't go!"

And at dinner, later, with her pile of letters at her plate, as she took first a spoonful of celery soup and then a taste of buttered flattery from some unknown correspondent—chattering on over her fish of how Helen Ramsay had inquired for him, and—"Heavens, another request for an autograph!"—enthusiastically attacking her roast, seasoned with "Think of advertising me as the most beautiful authoress in the United States!" but, with the olives, only nibbling abstractedly at "Couldn't you really manage to go with me, darling?—or come for me later, dear?" and "Oh, what is this?" as she read another "lovely" review of her book—kindling and glowing, so pleased with life and art, Lester Hope smiled to think with what ironic ease the scenes often pass off that one has most dreaded.

He was working on an important case, he had told her, and she accepted his explanation without suspicion. Wasn't she, in fact, a little too ready to accept it? Didn't she change the subject rather abruptly to the fact that her name was in the new edition of Who's Who? And while she ran on about having her portrait painted by Willyer, and her election to a woman's fashionable club, Lester Hope sat thinking. Why was he so perturbed? After all, wasn't it natural enough and pardonable enough that all this flattery and hero worship should turn her head a little?

But every day he grew more depressed. So far, he had felt only the pinpricks to his pride; but now a steady heartache began to oppress him. More and more her career seemed to be separating them. Undoubtedly if he had spoken of it she would have said that it was only his fault. If he would stay at home nights, or work late at the office, instead of accompanying her, how could she help it? Nevertheless, he noticed that she urged him less and less to go with her.

There were, of course, dinners she gave at home, ordeals which perforce he had to attend. He couldn't always have "business in Boston" or "an important conference in Philadelphia." At his own table he roused himself with an effort to be agreeable to the Peevers and Woodlings, to joke affably with writing persons, from the latest visiting Briton to story-tellers of the Helen Ramsay type. With an occasional guest, such as the handsome portrait painter, Willyer—who, thank God, didn't scribble!—he got on sympathetically; but his hospitable efforts in the rôle of Mrs. Hope's Husband usually exhausted him. The minor celebrities were overpolite, treating him as something between an old family servant and a precocious boy. The higher stars of literature drank his wines; they smoked his cigars; they were assiduous to his pretty wife. But her husband they jovially ignored.

"'You Must Have Been Deprived of Pretty Things When You Were Young.' That's Right, Too; I Was, Wasn't I?"

Down to the library one evening came Pauline in a bewitching new gown—one of the extravagances for which she herself was now paying. Never had he seen her so beautiful, he thought, as when she walked into the room and threw down her tulle scarf. What a change from the slender lines of her budding youth to this regnant lady, blooming to-night in perfect flower! His wife? It seemed impossible!

The jewels on her bare throat sparkled; and as she critically selected her orchids under the Winged Victory, Lester Hope saw as never before what success had done for her. Letting his pen fall, he watched her. No—ah, no longer was she Pauline Forr, the naïve, romantic, talented girl, the wayward darling he had first loved and molded. Could Pauline Forr ever have handled those orchids so calmly? Pauline-of-the-violets! Nor was she any longer that young Mrs. Hope, that fresh suburban Mrs. Hope, so proud of her husband, her home, her position. Oh, no; young Mrs. Hope, before this, would have had her arms about him, petting him, teasing him, pulling that obstinate lock of hair—how he remembered!—so whimsically affectionate!

The orchids were arranged in her corsage; the orchids were rearranged. There was a reconnoitering glance; then:

"Couldn't you possibly come with me, dear, this time?"

He stiffened and shook his head.

"I'd particularly like you to to-night, Lester. It's horrid going alone!" She laid her hand gently on his arm. "Of course I know it may bore you; but ——"

How he wanted to seize that hand, seize her as he used to, and crush her in his arms! But his demon of pride forbade. Instead, he turned to his papers uneasily.

"No," he said dully; "I'm sorry, but I've got some writing to do."

There was a moment's wait; then, with a toss of her head, her expression changed. Chin up, shoulders back, splendid as a countess was Pauline Hope. Oh, there was no changing her pose now; it was quite evident that it would last all the evening—and more than one would ask admiringly: "Who is that over there—that proud-looking creature, with the dark hair?"

As the front door closed after her Lester Hope rose wearily. To-night, for the first time—yes, for the very first time—he wanted to be alone. He looked about. Alone? Why, the whole room seemed fairly filled with her brilliant, eclipsing personality. Didn't everything in it suggest her? She dominated him still.

Out went an electric light, and her writing desk disappeared into the gloom. Shrouded in that shadow, too, her framed photographs of authors and "presentation copies" no longer accused him of his own conspicuous lack of fame. He turned another switch, and another, drowning more evidences of her new public prosperity—those rare editions she was so proud of, her prints, her paintings, and all that made the place so appallingly literary—until at last he was safe in a little yellow oasis of light at his own desk. Safe? Ah, still in the shadows the specter lurked! "What are you going to do with me?" it seemed to say. "I am Mrs. Hope's Husband!"

And yet—it was not as Mrs. Hope's Husband that he had gone so brilliantly through college; it was not Mrs. Hope's Husband who had won with dash and skill on the polo field; and when men talked of the stars of criminal legal practice his successes had never been set down to Mrs. Hope's Husband. Surely there was some personal force in him! No; what people had said was that Lester Hope was magnetic; that he was a good fighter; that he never quit. They said, also, that his force was heightened by his picturesque and distinguished appearance; for, so tall and dark, with his twisted mustache and the little tuft on his chin, with his long sensitive hands, he looked more like a French count than a New York lawyer.

Now, alone in his library, as he paced, absorbed, he showed something of that old vigor; but well he knew that, once Pauline had returned, radiating her new prestige, that positive personality of his would again fade and dwindle.

The dull-blue portières were parted. A maid looked into the room.

"There's a package come for Mrs. Hope, sir," she said. "Could you sign for it? The man's awful particular about it; but he said if she wasn't in Mrs. Hope's Husband would do."

She left without noticing the cheeks of the self-controlled man who had handed her back the receipt book. They were burning as hotly as if she had struck him in the face.

As he opened and shut the drawers of his desk, thinking dispiritedly that he must go to work, he paused, staring at something—something ragged, worn, soiled.

He drew it out. What queer stuttering printed words! What irregular spacing and erratic margins! Hyphens and capital letters strewn in reckless profusion; words crossed out; words written in; careted and blotted—well he knew those pages! Again he seemed to be talking over those early tales of hers with her, arguing their psychology, elaborating their romantic plots. Why, they had sat up talking them over excitedly together, night after night, often until two or three in the morning! Together! Where was that "togetherness," as she used to call it, now?

WHEN WAR BRIDES MATURE

One of the Vast Munition Plants Suitable for the Purposes of War or Peace

By Edward Hungerford

THE parents of two of our most blossoming war brides of a season or two since met recently on a train coming down to New York from up in New England. Bliffkins was still optimistic; Simpkins, decidedly the reverse. The Russians had just taken advantage of a cancellation clause in a big contract they had given him for army supplies, and he was groaning at the loss of the big order.

"I have my plant built and equipped and keyed up for fifteen million dollars' worth of business a year—and only six millions in sight, now that we've lost that contract. We've got to get some selling force to jam nine million dollars' worth of our product down the throats of the great American public."

Bliffkins laughed.

"In every one of our contracts that we made with those fellows over there we made our selling price big enough to include the entire cost of new plant—land, buildings, machinery; every bit of it. When the job's done they could be burned down and we should not have to charge a cent off our books."

"The cancellation clause in my own contracts prevents me from having any real cash loss," asserted Simpkins, with a big man's zealous regard for his professional reputation. "But that isn't the real damage."

"What is the real damage?"

"Prestige! We've the biggest thing in our town—in our end of the state, for that matter. Jonesboro is proud of us. It prints the picture of our plant on the Chamber of Commerce stationery and it's moved along pretty lively to keep pace with us—a new hotel, two new office buildings, schools, churches; to say nothing of apartment houses by the dozen, and whole miles of new streets and individual houses. Jonesboro has banked on me and on my plant. I've got to keep it up to the notch we've set or the town goes bankrupt.

"Get me? If the town goes broke we might just as well pull up stakes and get out. We shall have lost the most valuable asset any business can have—prestige! That's why I am on my way to New York and to Pittsburgh, to get a sales manager and an efficiency man. We've just got to create a market for nine million dollars' worth of stuff that my factory and machinery are equipped to turn out."

Who's Got the Potash?

SIMPKINS was not long-headed in the first instance. It was the unforeseen cancellation of his contract that caused him suddenly to look ahead to the days that will come after the inevitable ending of the great war in Europe. Other manufacturers have been looking forward almost since the very day that Europe was first set afire. They are the Bliffkinses, perhaps. And still another class of manufacturers, whose business runs far afield from munitions of any sort, have looked forward too. Their businesses have also been growing. And they have felt that after the war there will be a large number of ready-made modern factories for sale—at a great bargain. It will be a day for gaining very low overhead costs.

Not all the buildings that have housed the war brides will be for sale. Oh, no! A good many of their owners, like Simpkins, will find new products to which their buildings, their locations, their classes of help seem best adapted. Some of the explosive plants, as we shall show you in good time, may be turned over to the manufacture of dyestuffs. Other explosive factories, flung widespread on the community plan for the better protection of their workers and the surrounding countryside, will be torn down or abandoned. These plants are like those of Bliffkins, and have had their entire construction costs covered in the munitions contracts. They can be completely erased without loss to their owners.

What of these war brides after the war?

Before we give a direct answer to this question, let us give consideration to one that is closely related to it and must precede.

For what was America most dependent upon the Central Powers before the coming of the war?

Apparently for three things—for potash, which came in great quantities from Germany; for chemicals, which had many drug and manufacturing uses; and for dyestuffs—particularly aniline dyes. And our position in nitrates—ranking even ahead of potash in the making of land fertilizers—has been and still is none too good, to put the matter plainly. The nitrate situation has been very greatly improved. A private concern has built a plant large enough to produce synthetically all the nitrates it needs for its present uses. And that plant must be reckoned as so much clear gain for America.

In the manufacture of steel and of steel products we have no peer. In all the world there is no other Pittsburgh. Our textile industry is firmly established and thoroughly competent, though, as I shall show you in a moment, firmly dependent upon the dye industry. In garments—men's and women's, outer and under—we have stood second to none. American-made shoes and hats go all over the world. So do many of the novelties and the luxuries we have created—to say nothing of manufactured foodstuffs. Yet we have not been industrially or economically independent. We have lacked the potash, the dyestuffs, the nitrates. Without these three things, America—even richer in raw products than in manufactures: cotton, corn, wheat, tobacco, iron, silver, gold, copper—remained to an extent helpless.

A dozen years before the great war began it was being suggested that the Federal Government should give its aid toward the production of potash—a salt which heretofore has been derived almost entirely from the great Stassfurt deposits, in Germany. There is a considerable mineral deposit of this salt in California. But it is believed that this deposit is only enough for the necessities of our cotton and wheat crops for a single year; in fact, it has been said that a lack of potash has been the chief cause for the poor crops of these staples during the last year or two. It is interesting to note that when the European war broke, salesmen who had sold potash to farmers at prices round thirty-five dollars a ton went round and bought back all they could, paying three hundred dollars and upward for it. From that time forward wheat and cotton crops began to suffer.

There is another way, however, in which potash is, at the immediate moment, of far more importance to the United States than for these two great products of its fields. Potash is an ingredient of powder—particularly of the old-fashioned black powder, still used in shrapnel. Moreover, the chief American source from which potash is derived also holds acetone, which, in turn, is the chief solvent in the manufacture of smokeless powder, universally used to-day by all the armies of the world. Without an assurance of potash and acetone in abundance within its own boundaries the United States could ill afford to go to war.

To-day it holds such an assurance, secured through the scientific development of one of the very largest of its war brides. It was sudden necessity that gave to us the very thing for which we had been slowly and rather ineffectually groping for a dozen years or more. The war bride in this case had been given large war contracts for smokeless powder and other modern explosives—among them, cordite. Cordite is a sort of British specialty. English gunners of high and low degree fancy it. The staff heads of the chief of all the Allies indorse it. And when England finally got into the war game she demanded it—asked America whether she could fill a contract for two million pounds of the stuff.

The contract came eventually to the above concern. It began figuring on the contract, with the help of its expert chemists and cost experts.

Acetone for Cordite

"PASS up that English order," advised some of its rivals in the munitions field. "It will cost you no end of trouble. It's the most rigidly tested propellant in all the world. It's got to drive a sixteen-pound shell sixteen hundred and forty-five feet a second or the British Government will reject the whole lot. Twelve feet a second off, and you will have a hundred-thousand-pound batch turned back as waste. Don't touch it! There isn't a cent of money in it."

But, on the other hand, the contract bade fair to become a twenty-five-million-dollar affair—a *dot* well worth the attention of even the most captious of war brides. The company went to experimenting. Not all of its trials were successful. Some were. And it was because of these that the sales manager of the concern went hurrying up to New York to see E. R. Stettinius, of the House of Morgán, the man to whom was intrusted the big job of buying most of the war supplies from America for the British Government.

"We are ready to sign up for the delivery of two million pounds of cordite—two hundred thousand pounds to be tested and approved and on shipboard within six weeks' time, or we forfeit a bond for a quarter of a million dollars," said the sales manager.

Stettinius was not so quick.

"Where are you going to get enough acetone?" he inquired.

That had been the sticking point at which other powder makers had failed; for cordite, unlike the other smokeless powders, is built up not from one but from two explosive ingredients—guncotton and nitroglycerin. And the only practical solvent for these is the curious liquid of pleasant, ethereal odor—acetone. The total production of acetone in the United States before the beginning of the war did not exceed seven million pounds. The single contract the powder company was prepared to sign would call for six hundred thousand pounds of the stuff. And there were British agents, here and there and everywhere across the face of the land, buying acetone for their own munition factories. The price already had jumped from ten cents a pound—the normal figure—to twenty-five, thirty-five, forty cents; and was still going up.

"Mr. Stettinius," said the sales manager of the powder makers, "if we will discover and develop an entirely new method for making acetone, and will draw our supply from a source now unknown and never before available, do we get the contract?"

"It sounds pretty good," was the instant reply.

Then followed conferences; the cable was put at work. It brought back from oversea this astounding counter-proposition:

"We, also, need acetone from this unknown mythical source of yours. Supply us with enough to make twenty-four million pounds of cordite over here and you can make

twenty-four million pounds of cordite over there—on the sole understanding that every last pound of acetone be derived from a source not now available."

Here was a proposition for an American manufacturer to face! He finally had offered the British Government an amount of cordite that would require acetone equal to the entire annual production in the United States. The British Government had replied by the cool suggestion that he double the offering; and it had tacked on a clause which limited the delivery to twelve months' time.

Some salesmen would have turned down the contract then and there. The powder expert did nothing of the sort. He agreed to take it, with all its staggering conditions, and hurried back home to start his concern on the manufacture of acetone—at a rate of which chemists had never before dreamed. It was a real problem. The old-fashioned way of making acetone, the way by which the United States derived its commercial output in ordinary years, was by the dry distillation of acetate of lime, which, in turn, is a product of the dry distillation of wood. But this was the method expressly forbidden by the contract. A second possibility was to erect a plant by a good water power somewhere—for legal reasons at a point like the Canadian side of Niagara Falls—and there manufacture acetone from carbide by a synthetic process patented and perfected by the Germans. But that method was complicated. And there was not enough carbide.

Then someone had suggested vinegar. And after his associates were done with their laughing comments, saying that there were not enough vinegar-making plants in the entire United States to make, combined, the fourteen million pounds necessary for the great cordite contract, it was decided that the powder company should build a vinegar plant that was big enough; and its sales manager returned to Mr. Stettinius and signed the contract.

A Floating Potash Mine

THIS is not the time or the place to attempt to describe in any detail the great vinegar factory that rose on the harbor shore not far from Baltimore. It is enough to say here and now that the ordinary process of making vinegar is to place fermenting fruit juices or alcohol in a wooden generator, four feet by eight and filled with beech shavings. Fresh liquor is fed in from the top; air is let in at the bottom; Nature takes its course and the vinegar is drawn off. This is the ordinary course followed in vinegar and yeast factories.

But the new plant was no place for the ordinary course of things. It was founded upon the extraordinary. It would have taken twenty thousand of the four-by-eight generators to make its output of vinegar—seventy-five million gallons in nine months' time. As it was, it took a city of nine hundred and sixty generating casks—huge affairs, each of them, and arranged like a miniature city in streets. There were innumerable ingenious devices for carrying the raw product to the casks; other carriers to bring the vinegar and to transmute it into the acetone, resembling nothing quite so much as hard rock-sugar candy. The entire plant cost more than three million dollars. It was but a single article in the attire of a typical war bride.

Not that it was all done quite so easily as it is here told; for, like a great many other overnight enterprises, there was quite a broad difference between the theory and the practice. And, because of the difficulties that were inevitable to the operation of a great new plant, there were only about one hundred thousand gallons a day coming out of the great vinegar casks—and one hundred and fifty or two hundred thousand gallons a day was needed to save the contracts.

This is where we come to potash. At the very moment when it looked as if the powder concern was about to achieve failure instead of victory, it turned toward kelp, as a fresh source of the needed acetone. And through kelp—which holds potash as well as acetone—it saved the day, not only for itself but apparently for the whole United States. For as soon as it became a commercial necessity to harvest the seaweed for acetone it was both possible and practicable to refine the potash, which is the very thing that is being done to-day.

If you have ever been to San Diego you must have noticed the great field of kelp—acres upon acres of floating seaweed—which rests upon the surface of the Pacific outside the entrance to its harbor. Until now it has been of no commercial use whatsoever, though the Federal Government has been urging its exploitation for many years past. In other countries the beach combers have gathered up the kelp after the passing of the tide, and from it has been refined a very useful and practical potash. But there is little tide at San Diego and so the algæ rarely ever come ashore. It is necessary to go out and cut them.

A dozen inventors have filed a hundred patents or so on self-propelled cutting scows for harvesting the kelp. Not one of them had ever succeeded in making an ideal machine. A kelp-cutting harvester, to be successful, must not only be able to operate satisfactorily against adverse weather conditions but must also cut the algæ—not pull them out by the roots and so prevent their propagation and regrowth. And so one of the great potential assets of the United States remained undeveloped.

The powder company felt that it could crack the difficult nut. It went out to San Diego last summer and quietly built a great refining plant by the side of the harbor at a cost of more than a million dollars. San Diego rubbed its eyes in astonishment. It is not used to the quiet method of doing big things. No advertisements; no stock solicitation; no request for a free site from the Chamber of Commerce; not even a request for a loan from any of the banks—only fifteen hundred men working day and night to make a commercial dream of the years come true. But the dream was coming true. Not only was the plant being built there before its very eyes, a pier twenty-two hundred feet in length thrusting itself out into the harbor, but Captain Norris, who had handled all the big harbor work for years, until he was made port pilot, was working at the kelp with a real cutting scow.

The cutting scow, like the Baltimore vinegar plant, was not an immediate practical success. Yet its success was absolutely essential to the success of the refining plant. And upon the refining plant hung that twenty-five-million-dollar cordite and acetone contract with the British Government. So that when the cutting scow refused to do the work demanded of it the powder company felt that it had the hardest of its problems still to solve.

The House That Jack Built

THE problem was not beyond solution. A shrewd mechanical expert from headquarters had gone to San Diego at the beginning to devise a harvesting craft that would cut the kelp, that makes the potash, that makes the acetone, that makes the cordite. The house that Jack built would have been nowhere without Jack. And so the cordite contract would have been just so much waste paper without a successful harvester in the waters of San Diego Bay. Under such necessity American wit and ingenuity triumphed. They rarely fail in such hours. A successful and practicable harvester was finally developed by the mechanical expert and set at work in the kelp. It is still working there, two others beside it—each cutting about five hundred tons a day. The contract has been kept. American ingenuity still stands above par on the other side of the Atlantic. But, best of all, we have gained a great permanent industry—a fine industry in time of peace, an asset of almost incalculable value in time of war.

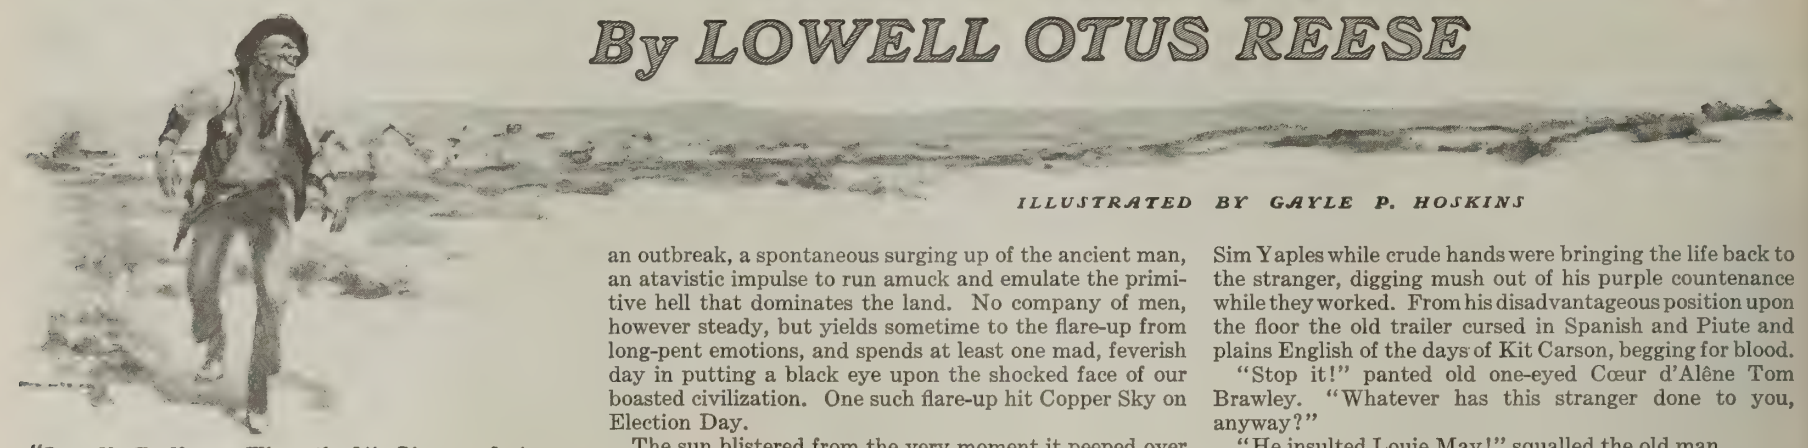
The Government experts have said that this bed of kelp can be relied upon to supply potash for the entire commercial and the greater part of the agricultural needs of the United States for many years to come. Other scientists have disagreed with them. Yet it is conceded that the San Diego experiment has proved successful. It is only reasonable to suppose that the present harvesting work will be

(Continued on Page 89)

In the Manufacture of Steel and of Steel Products We Have No Peer in All the World

The Constable of Copper Sky

By LOWELL OTUS REESE



ILLUSTRATED BY GAYLE P. HOSKINS

"Bury Me To-Morrow Where the Lily Blossoms Spring Underneath the Willows, While the Little Robins Sing"

THIS story properly begins away back in the dim remoteness of the origin of being, when Nature instilled into all sentient creatures the Pride of Preferment. However, since Nature has further endowed us with the urge to go quickly to the heart of things, we jump clear down the ages to the Day of the Big Jag, when Copper Sky celebrated three memorable things—its first election; the dedication of the new calaboose; and the impending wedding of Louie May.

The election signalized Copper Sky's arrival at the dignity of townhood; the new calaboose marked the end of the time when the occasional lawbreaker would be taken haughtily away by some petty official of Cactus Center, to be tried by the court down at that pride-bloated metropolis. Cactus Center was the county seat, and it presumed upon the fact. It had the jump on Copper Sky, and it rubbed it in on that growing town. Wherefore, Copper Sky hated Cactus Center. The county seat saw in Copper Sky a potential rival; so naturally it hated Copper Sky. The antipathy extended to individuals; and woe followed the Copper Sky pilgrim who stepped out of the Straight and Narrow when making a visit to the county seat.

Which leads us to the wedding of Louie May and its relation to the opening of the great epoch of civic independence.

Several years back Aunt Malindy Crow, who owned the Palace Hotel, made a far pilgrimage to Los Angeles. When she came back Louie May came with her. Now so far back as she could remember, Louie May had been an orphan, unnoticed, unloved, and unlovely in the hopeless uniform of the Orphanage. For orphanages, like many individual philanthropists, oftentimes give generously of everything but love.

But in the hearts of Copper Sky Louie May found all the love that her earlier years had missed. As the months went on, not one of the rough men but would have fought to the last breath for her. And in that generous atmosphere Louie May expanded with wonderful rapidity. The awful primness of the tightly pulled hair gave place to little kinkles and curls, and there was a red ribbon. A song came to her lips and stayed there. She reveled in work, and flew from kitchen to dining room, a regular little fury of industry.

So the years went by and Louie May was a young woman. Copper Sky didn't realize it; but Kelley Briles did. About the time that Louie May came to the Palace, Kelley Briles, himself only a boy of nineteen, took a "lay" on a portion of the Happy Chance Claim, up on the breast of old Soledad Butte. A lay, of course, is a lease, given upon a certain portion of a claim for a certain period of time. The man taking the lay gains in exact proportion to the amount of work he can crowd into the life of his lease. Kelley Briles had spent four years in working like a fiend. His ambition began with a possible stock ranch and alfalfa field down in the valley; but it soon expanded and included Louie May.

So Kelley's lease had expired. His last shipments had been made and the returns were stored away in old Judge Navlett's safe—gold, to the amount of twelve thousand dollars. It had been the boy's idea to have this rich witness to his four years of hard work in order to lend an added interest to his wedding day, which was set for the day following election. A boyish whim, certainly; but it might be forgiven, for Kelley was but twenty-three years of age.

II

LIFE on the desert is a hard thing. Sun, wind and the eternal dryness conspire to batter at the doors of fortitude. Labor, under these conditions, tries the soul. Consequently there is bound to come a time when occurs an outbreak, a spontaneous surging up of the ancient man, an atavistic impulse to run amuck and emulate the primitive hell that dominates the land. No company of men, however steady, but yields sometime to the flare-up from long-pent emotions, and spends at least one mad, feverish day in putting a black eye upon the shocked face of our boasted civilization. One such flare-up hit Copper Sky on Election Day.

The sun blistered from the very moment it peeped over the shoulder of Soledad Butte and glared at Copper Sky. The new calaboose, a twelve-foot box built of iron slabs and set in the middle of the Public Square, warmed with the promise of what would happen to the town's malefactors in the future. It was going to be a hot day.

It was going to be more than that. From the moment the citizenry began appearing upon the sand-littered board sidewalks one could see that something was brewing. Substantial ones, whose ordinary lives were most exemplary, teetered slightly when they walked. Old Dad Tolliver went about, apparently sober; but an unusual solemnity sat upon his wrinkled face and he chose each step with meticulous care. Judge Navlett, of course, was entirely above suspicion; but later in the day even Judge Navlett was observed to be smiling happily to himself; and a moist, tender light was in his eyes, half hidden beneath their bushy brows. It was indeed going to be a hot day.

Breakfast was being eaten in the dining room of the Palace Hotel. Halfway down the table sat a stranger with a V-shaped scar on his chin and a splash of white hair in the cowlick above his forehead. He, too, showed signs of the artificial exhilaration that infected the morning atmosphere.

Opposite the stranger little Old Sim Yaples, bald, toothless and wizened, was pursuing a couple of beans about over his plate, trying to coax them upon the end of his knifeblade. His efforts were meeting with a disheartening lack of success, however, because he was unable to ascertain which of the two beans was the real one. The baffling legumes had worn his temper to rags; and besides, Old Sim did not like the stranger across the table.

The old man at last succeeded in his chase and the fugitive bean was on its way to his open jaws, poised upon the knifeblade, where it wabbled precariously. Louie May came in and set a bowl of hot mush before the stranger.

"Hello, sweetheart!"

Old Sim started violently. The bean hopped off his knife and rolled under the table.

The next moment the astonished alien's face was buried in his bowl of hot mush and held there by a skinny old hand that was like a bunch of steel springs. Old Sim's other skinny claw was searching industriously for the stranger's windpipe. Chairs went over backward. Louie May screamed and Aunt Malindy rushed in from the kitchen. Old Sim had discovered the amorous individual's windpipe and was constricting it earnestly, while with his other hand he held his victim's face jammed down in the steaming mush.

It was not at all a pleasant affair. When it was over the dining room was a wreck. Three large men sat upon Sim Yaples while crude hands were bringing the life back to the stranger, digging mush out of his purple countenance while they worked. From his disadvantageous position upon the floor the old trailer cursed in Spanish and Piute and plains English of the days of Kit Carson, begging for blood.

"Stop it!" panted old one-eyed Cœur d'Alêne Tom Brawley. "Whatever has this stranger done to you, anyway?"

"He insulted Louie May!" squalled the old man.

This was indeed different. To the casual transient Louie May was just a dining-room waitress, born to be the natural target for leering pleasantries; to the rough, powder-reeking men of Copper Sky she was Louie May, daughter of the camp, sweet and good; a marvelous flower blooming in the desert, making glad the waste places. For in the wide country men gain a clearer perspective of things; and a waitress with a clean heart appears to them exactly what she is—a brave soul bringing to honest labor the dignity it deserves.

Louie May insulted! A cordial sentiment at once manifested itself, favoring Old Sim's immediate release, to the end that he might resume his pleasant diversion. But the opportune arrival of Old Dad Tolliver saved the issue. Dad, the old bellwether of the camp, pointed out how opprobrium surely would rest upon Copper Sky's first election if a stranger were immolated at the very inception of the great event.

"Besides," said Dad, "the man's drunk. He ain't used to Copper Sky whisky. And you got to allow that when a man's dazed—sort of—the sight of Louie May's sweet face is liable to start him saying things he ain't at all accountable for, not being in his right mind and seeing her kind of suddenlike."

Old Dad's argument prevailed at last, and the gagging unfortunate was borne away and hidden in the back room of Judge Navlett's office, against the coming of the night passenger train. Then Copper Sky quickly forgot him in the superior interest that attached to the opening of the polls.

But one there was who did not fall for Dad's sophistries. Nor did he forget. Sorely disappointed, Old Sim Yaples wandered up and down the town, his shiny old gun in his belt and a hungry look in his dim eyes. All day he spent in this futile search, his moccasined feet padding from one saloon to another. Sim Yaples was a relic of the days of the old plainsmen and he still clung to moccasins, even in the desert, where every cactus thorn promised him a dagger thrust, but seldom made the promise good; for Old Sim's feet seemed to have eyes in the dark.

The new calaboose was used as the voting place. At irregular intervals Old Sim's travels brought him by this place, where a majority of the population was gathered.

"Ain't she a fine one, Sim?" gurgled Scotty Mackinnon when Sim stopped for a moment to regard the new structure.

The old man's sullen gaze regarded the calaboose appraisingly.

"She ain't so big as the one down at Cactus Center," went on Scotty; "but she's a heap more stylish."

Sim nodded his bald head. His eyes fell upon the door fastenings.

"Looksh like shame kind of a lock as the one on Cactus Center Jail," he said.

The Company Followed Sim Into the Street, Leaving the Boy and Girl Weeping Together

"Shame kind of key, too. Wonner why they didn' gezzer differen' lock an' differen' key?"

Scotty didn't know. Old Sim went away, sore as a boil.

Another wrong had been added to the day's list. All the rest of the day that lock and key kept heaping up with the general rage that consumed him; for he had been in the county seat's calaboose and the memory rankled. He was an unrelenting partisan in the intense bitterness that existed between the two towns.

The voting had just begun when he came round again.

"I wish I was constable!" he barked, his bare old gums grinding together in his rage. "I'd go get that feller inshulted Louie May and scalp 'im! And I'd put a differen' lock an' key on ze calaboose. Ole women, tha'sh what Copper Sky ish! Let a stranger wiz a face like a chuckwalla come to town an' inshult Louie May, an' gezzer 'way wiz it! Ole women! Ole copycats! Had to copy lock on Cactus Center's calaboose! 'F I was cons'able it'd be differen'. Besshir life!"

Again the old trailer ambled away in hot fury. Scotty Mackinnon laughed a bibulous laugh. Then he decided to go in and vote.

"Who you goin' vote for for cons'able, Scotty?" asked another inebriate.

Scotty halted and drew himself to an approximate perpendicular.

"Who—me?" he asked gravely. "F'r cons'able? I ——"

Then into his mind crept a regular rogue of an idea. Like an electric flash it swept through his whole being and registered itself upon his grinning face.

"Me—I'm goin' vote f'r Sim Yaples!" he chuckled. "Joke—shee? Sim Yaples f'r cons'able! But keep it dark."

The wealth of the joke beat strongly upon the other's sense of humor.

"I'm gonna do it, too!" he announced firmly.

The two voted and went across to Johnny Eisinger's for a drink.

But the joke was too good to keep. They simply had to tell it. And wherever they told it, once it had penetrated beyond the haze the hot day's potations had wrapped about Copper Sky's intelligence, it exploded with the dazzling effect of a bursting comet. It was a fine joke.

The polls were closed and the counting of the ballots had commenced. Inside the calaboose, Judge Navlett, Dad Tolliver, Long Bill Holliday and several others, weighed down by a sense of the great responsibility, counted and tallied solemnly. On the very second ticket the Judge paused, after enunciating "For Constable," and regarded the ticket closely. Not satisfied, he put on his horn spectacles and looked again. Yes; there could be no doubt. The name of the regular candidate had been scratched; and in its place was scrawled: "Sim Yaples."

Sorely mystified, the old lawyer looked about him and announced the vote. The incredulous judges and clerks demanded to see the ballot. As it went from hand to hand a roar of laughter started. In the street outside, Scotty Mackinnon joined in the mirth; for he knew. It surprised him, though, when the rest of the crowd laughed also, understandingly it seemed. How did they know he had cast that vote for Sim Yaples? Yet it certainly seemed they did; and his foggy mind turned the matter over in amazement.

Another ticket was taken from the box. Again, when Judge Navlett came to "For Constable," he peered, as though unwilling to believe his eyes; and then he read again:

"Sim Yaples."

A third and fourth time this happened. The hilarity gradually began giving place to perplexity. What did it all mean, anyway? Each individual humorist remembered his own vote, cast in jest for Old Sim, but quite overlooked the possibility of other voters' having the same sense of humor. Here and there, as the counting proceeded, was a scattering vote for the regular candidate; but far oftener, when "For Constable" came, Judge Navlett read: "Sim Yaples."

It grew to be monotonous.

Quite ignorant of what was happening at the polls, Sim Yaples still quested about over town, looking for a man with a V-shaped scar on his chin and a patch of white in his cowlick. The old man was singing now. When Old Sim started weeping or singing sad songs, people who knew him kept out of the way. All day he had been drinking; but the fact was hardly perceptible in his gait as he came down the street, walking on his toes and warbling a melancholy song of ancient ribaldry:

"I was young and happy, and my heart was light and gay,
Singing, always singing, through the sunny summer day;
Happy as a lizard in the wavin' chaparral,
Walkin' down through Laramie with Snagtooth Sal."

"Are You Coming—or Will I Have to Crawl in There and Beat You Up Into a Sausage?"

As he came by the calaboose he broke into his lachrymose refrain:

"Sal, Sal,
My heart it broke to-day—
Broke in two forever when they laid you in the clay;
I would give creation to be walkin' with my gal—
Walkin' down through Laramie with Snagtooth Sal."

"Oh, Simeon!"

Still wearing his perplexed look, Judge Navlett beckoned the old trailer up to the door.

"God alone knows how it happened, Simeon," said Judge Navlett; "but you have been elected Constable of Copper Sky!"

There was a dead silence. For the first moment, Old Sim's faded, bloodshot eyes traveled round over the assembled faces, sinister, dangerous. He seemed to sense a joke—and he was in no mood for jokes. His gaze came back to the quiet, grave face of Copper Sky's respected old jurist, still wearing its look of perplexity.

"Here are the implements that go with your office," said the judge.

He handed to Sim a pair of handcuffs and an enormous star, upon which appeared the word "Constable" in huge letters; and finally the shining key of the calaboose.

Old Sim mechanically accepted the articles. Plainly he did not as yet comprehend or believe.

"It's all right, Sim," said Dad Tolliver. "The camp elected you constable by a three-fourths majority. I think it was done as a compliment to you for defending Louie May." Crafty Old Dad!

Old Sim saw and believed at once. Virtue had been recognized at last! He thrust the cuffs and the key into his pocket, and pinned the potential badge upon his shirtfront. He cast a lofty look of proprietorship at the calaboose; and that look seemed to assure the world that he would keep that noble structure full and running over throughout the entire period of his incumbency. Purpose was in his eye as he padded swiftly away through the soft, cooling air, tempered now by the relenting sun. At last Sim knew what it meant when Nature instilled into every breast the Pride of Preferment. He was Constable of Copper Sky! Now let the man with the V-shaped scar on his chin beware!

Dad Tolliver turned to Judge Navlett with a troubled face.

"The boys elected Old Sim as a joke," he said. "They were all drunk. You're a lawyer, Judge; is it going to be legal?"

Judge Navlett looked out over the desert, where the evening was beginning to turn the world to burnt umber and mauve, edged with mysterious black, far out on the edge of the Panamints, where the night was creeping up over the rim of things.

"Well," said the venerable lawyer slowly, "if three-fourths of a community of tough desert men say a thing is legal, it is my opinion that nobody is ever going to risk his precious health trying to argue them out of it."

III

BREAKFAST in the Palace dining room next morning in no way resembled a frolic. Gloom was everywhere. Heads throbbed and furry throats recoiled in disgust from bacon and beans. Mush was a low thing and coffee found favor only because of its admirable virtue. Yesterday had been a great day; but to-day was the Morning After.

Louie May alone flitted about the breakfast room like a solitary sunbeam playing among murky clouds. This was her wedding day. Already the room was decorated for the occasion, and a great bell hung above the table, made of white flowers brought from Los Angeles at much expense. Always the girl watched the door with bright expectancy whenever a step sounded, coming from the street. But for some reason Kelley Briles was late. Disappointment began to threaten the happy light in the girl's eyes, and once or twice her lip quivered.

"Don't you worry, Louie May!" smiled Old Dad Tolliver reassuringly. "Kelley's over at Judge Navlett's office counting that twelve thousand he's going to give you for a wedding present."

Louie May smiled faintly. Then the door opened and Kelley came slowly in. His face was gray-white above the unaccustomed linen collar, and he shook as with a chill.

"Kelley!" cried Louie May.

The boy moved across and took her in his arms.

"I—I hate to tell you, Louie May," he whispered hoarsely; "but I got to. Somebody stole our gold out of Judge Navlett's safe last night!"

"Oh! Poor Kelley!"

Then the young fellow broke down suddenly, and she soothed him as though he had been a child. Over his shoulder her stricken eyes went round the table and stopped where sat Old Sim Yaples, the enormous star upon his breast, mocking her with the futile legend, "Constable."

Old Sim got up and glared round at the assembled miners.

"Where'd you put him?" he demanded harshly. "Where'd you tuck in that poor, lovin' stranger after you took him away from me yesterday?"

THE NIGHT OF THE DUB

By Albert Payson Terhune

ILLUSTRATED BY GORDON DINGWALL

"Of Course There's Dozens of Good Dinners Cheaper. But We're Doing This Thing Only Once, and We Want to Do it Right"

THIS tale's introduction could be shortened and made simple to a degree by dropping unwieldy verbal portraiture for the apt art of the movies.

For example, on the snow-glare screen might be thrown a "flash," or a "still," of a youth with colorless hair and homemade features, absorbedly busy, conning a seed catalogue. This might be followed by the pulsate caption:

Homer K. Twitty, Commuter; Twenty-four-dollar-a-week Clerk in Brokerage House of Ganz, Ganz & Sons.

After the audience's record holder for slow reading had had ample time to master and commit to memory this announcement, the genius in the box might screen another "still"; this one depicting an aggressive-jawed and portly man of thirty, clad in due servility to next year's most advanced styles, thoughtfully passing a few yards of ticker tape through his gloved fingers. The Iris Fade-Out of this attractive glimpse might be followed—or preceded—by some such lucid explanation as:

Reggie Ganz, New Head of Ganz, Ganz & Sons.

Thus, in four brief stills or flashes, everyone in the darkened auditorium would at once become familiar with the two protagonists' personalities and chief traits, and would be thoroughly prepared for some such later gem of photoplay rhetoric as:

"Whom do you suppose would credit such a lie when you would reveal it to them?"

The screen is mightier than the pen; and it clears—in one glad stride and two captions—the ground over which the typewriter must plunk tediously for six pages. Wherefore ——

Homer K. Twitty was not even a cog in the great minting machine known to fame as Ganz, Ganz & Sons. He was merely one of the numberless drops of oil that kept the cogs duly lubricated. Yet he was a reliable little drop. Between the ages of thirteen and twenty-seven he had mounted dizzily from wastebasket guardian to the aforehinted twenty-four-dollar-a-week clerkship.

Being reliable, he would always have a job of some kind. Being reliable, he would always need one. His special oil dropper was the second of the three employee-jammed outer offices of Ganz, Ganz & Sons. Here, like Theseus in Æneas' vision, he "sat, had sat, and"—presumably—"evermore would sit."

Beyond him, amid roseate clouds, loomed the inner office, the shrine toward which all good clerks' upward steps were bent; the goal of attainment which outer-office workers viewed with dimming hope as the toil years slowly ground their optimism down to hardpan drudgery.

For the rest, Homer K. Twitty was of the type so eagerly sought for by life's stage director to enact such stirring rôles as Second Citizen, or Voice in the Crowd, or Confused Noise Without. He was not a shining light. He was not even a danger signal. He was a dub.

All this in the offices of Ganz, Ganz & Sons, on Wall Street, Manhattan.

But there was compensation, and it lay to westward—twenty-two miles to westward. To reach this Promised Land, Homer daily plodded to ferry or tube, crossed the river, rode in the second car behind the smoker for sixty-seven minutes—except when he chanced to miss the express, in which sad case the trip was eleven minutes longer—and detrained at Pompton Plains.

But it was no dub who stepped importantly down from the train. It was a Wall Street man. Therein lay the compensation, Wall Street being like a successful operation, or a conscience victory, or a stormy scene with the boss—in that the farther away from it one travels, the more important and glow-inspiring it becomes.

Not that Homer had laid claim to greatness. He had simply announced, when first he moved to Pompton Plains, that he was in the brokerage house of Ganz, Ganz & Sons. And Pompton Plains had done the rest. It was passing sweet, after a lubricating day of dubdom, to have fellow commuters beg him to tell the inside reason for some Wall Street antic that had smeared itself on the evening papers' first page. It was even sweeter to be chosen unanimously as arbiter in every petty financial argument. Sweetest it was to be asked:

"Why don't you bring Reggie Ganz out with you, some night, to one of our duck-pin tournaments?"

Reggie Ganz! Homer had stood in the presence of the great man just four times in all his life. Twice, when the head clerk had sent him shivering into the inner office with accounts the boss had asked for; once when Ganz had passed him in the corridor and had made him the proud bearer of a message to the office manager; once when Reggie, shooting through the outer office in a rush for a train, had stumbled over Homer's wastebasket and had courteously asked the basket's quaking proprietor why in hell he didn't have sense enough to keep the aisle clear!

To be just to Homer, he had not bluffed—to any criminal extent—when Pompton Plains had sought to thrust Wall Street renown upon him. To all requests for tips or for the secret reasons for some stock flurry, he always made curt and truthful answer:

"I don't know anything about it."

A reply which convinced his worst enemy that he knew all about it. To the suggestions that he bring Reggie Ganz out to fair Pompton Plains for a session of the Duck Pin Bowling Club, or for some other local orgy, he ever replied, with equal curtness and veracity:

"Ganz is a pretty busy man. I'm afraid he wouldn't be able to spare the time."

Nevertheless, at heart he thrilled with the importance thrust upon him. And, to prevent his fame from ebbing—there was always his wife. Bertha Twitty knew, to a penny, what pay Homer received. She knew he was merely one of a swarm of subsidiary clerks in an immense brokerage house. All this she knew—with her mind. Even as, mentally, the average mother must surely realize that her only son is not a choice blend of d'Artagnan, Socrates and Sir Galahad.

Yet, as a mother drapes the combined mantles of those three worthies over her slack-jawed boy's narrow shoulders, so did Bertha endow her clerkly spouse with all the glories of a fictional Wall Street man. She was a truthful soul, this brown-and-drab little woman. Yet—well, she was a childless wife, who must perforce have an idol. And Homer K. Twitty was the sole available candidate for the pedestal. A poor, blind candidate, perhaps; but the only one in stock.

Social life in the pretty suburb of Pompton Plains waxes gay to an extreme when the summer boarders have departed, and when, like hibernating bears, the commuters must rely upon themselves alone for pabulum. And the bright center, round which revolved the winter gayeties of Homer K. Twitty's set, was the Pompton Plains Thursday Night Duck Pin Bowling Club.

There were but eight members of this exclusive club—all men. But they had injected a jolly feminine atmosphere into the functions—and disarmed wifely remonstrance at lonely home evenings—by adjourning once a month, after the game, to the house of some member, whither the wives of the seven other members had preceded them, and completing the night with a dance and with a supper revel. The fare ranged in variety from Welsh rabbit to stewed oysters and cocoa.

It was Mr. J. B. Threbble, president of the club, who on one such Neronic night broached the plan that leads this story by slow steps from introduction to action.

"Say!" exclaimed Mr. Threbble, a third glass of sparkling lemonade mounting like *aqua vitæ* to his fecund brain and there suddenly begetting an inspiration: "Say, people, what's the matter with our doing this, sometime? What's the matter with our doing this? Listen, now. I got an idea. What's the matter with all of us doing this? What's the matter with our having a real blow-out? Hey?"

Mrs. Spencer Belding, hostess of the evening, bridled at the implied slur upon her delicious hot coconut cake and seltzer lemonade. But Mr. Threbble was too excited to notice. He expounded with growing eagerness:

"Listen! What's the matter with the whole crowd of us going to New York some evening—you girls meet us there when we quit work—and getting dinner at some good restaurant, and then take in a swell show and—and maybe get a bite of supper somewheres afterward, on our way to the train; and then catch the one-ten home? Hey? How about it, everybody?"

Probably when Columbus played his apocryphal trick with the nonauthenticated egg the hypothetical group of scientists gasped in silent amaze for a second, before breaking out in wild acclaim of the unique if asinine stunt. Certainly the assembled members—and their wives—of the Pompton Plains Thursday Night Duck Pin Bowling Club stared in awed bewilderment at the speaker for several consecutive seconds before their ravished vocal powers returned. Then everybody talked at once.

Mr. Threbble's plan was so alluring, and so feasibly simple withal, that his seven fellow members could have kicked themselves for not having thought of it long ago. As for the wives, they were unanimous in their plaudits. Seldom have

sixteen people been so thoroughly unanimous in indorsing anything. After that first check at the magnitude of the scheme there was not one dissenting voice.

At last the tumult and the shouting died and the gathering resolved itself into a committee of the whole, to go into executive session on the topic of ways and means. Here, as was but to be expected, there were a few minor clashes. But the universal optimism wave easily splashed over and through these. And the thing was ordained.

Bit by bit, during this committee meeting, Homer K. Twitty crept out of the ruck and well to the front, passing even the inspired Mr. Threbble himself. For as the theme took on a tinge of high finance—as regarded assessments, dues, the division of the outlay for dinner, theater, supper, and so on—all eyes turned by instinct upon the Wall Street magnate, whose long experience in handling such details as mergers, pools and reorganizations had fitted him above all other members for such a task as this.

Modestly Homer accepted the burden. A few deft if shameless questions gave him a precise knowledge of the sum that might be relied on to capitalize the venture. This total, with the aid of a pencil and an envelope back, was applied to the probable outlay, which was duly and by inches whittled down to meet the subscriptions.

"Here we are," was Homer's final masterly summing up: "Total assessment, sixty-four dollars—that's you men's eight dollars per. Get that amount in your minds. Sixty-four dollars. Total assessment."

He was very much the steel-cold Wall Street financier now. Even Bertha—who had seen him cry, that time he mashed his finger so cruelly in the china-closet door—felt just a little awed.

"Dinner comes next," he went on. "No; carfare from the place we're to meet to the restaurant. That's a nickel each, or eighty cents in all."

Mr. Threbble's lips worked rapidly in calculation; then he nodded assent.

"Dinner, next," proclaimed Homer. "Now I take it we want a real feed. The kind we can date time from, eh? Well, there's lots of good places where they serve a corking dinner for one dollar and twenty-five cents. Of course there's dozens of good dinners cheaper," he hurried on, steam-rollering an objection from prudent Mr. Spencer Belding, the evening's host. "But we're doing this thing only once, and we want to do it right. So let's say one dollar and twenty-five cents per. That's a total of just twenty dollars. Exactly twenty dollars and no cents. And two dollars for the waiter—ten per cent, you know—making twenty-two dollars. I'll pick out a place not too far from the theater," with a conciliating glance at Mr. Belding, "so we can walk there from the restaurant and save eighty cents that way. Now good seats for a good show will cost two dollars per. That makes ——"

"There are plenty of nice vaudeville places," objected Mr. Belding, "where they only charge ——"

"That makes a total of thirty-two dollars for the tickets." Homer frowned him down. "Then, on the way back, we can stop at a restaurant near the theater and get some dandy fried oysters and coffee all round. That'll be thirty cents more apiece; and a nickel each to the waiter—a total of five dollars and sixty cents. Then ——"

"With such a swell dinner, what do we want to load ourselves up with supper for afterward?" protested Mr. Belding.

"Oh, let's go the whole thing!" enthusiastically suggested his wife. "We're doing it only once. And I ——"

"Then," continued the auditor, "five cents apiece—carfare to the ferry. That's eighty cents more. I'm not counting in railroad fares. We men have our own commutation tickets and you girls all have ten-trippers. So the total expense of our grand outing is due to be just exactly—exactly—sixty-one dollars and twenty cents," he ended in triumph; adding, as a bright afterthought: "Which leaves us two dollars and eighty cents in the treasury toward next year's spree, if we decide to make an annual thing of it!"

"Why not rebate the two dollars and eighty cents, pro rata, to the members?" ventured Mr. Belding.

But nobody heard him in the gust of approval over Homer K. Twitty's financial achievement. On the crest of this applause Homer was unanimously chosen treasurer of the expedition, and was further honored by popular assignment to the responsibility of picking out the restaurant and the theater. He felt much as though Reggie Ganz had turned over to him the entire yearly profit of the firm and had bidden him invest it in whatsoever manner his judgment might dictate. It was a fearful responsibility his fellow club members had thrust upon him. But in his own sanely self-confident heart Homer knew himself equal to it.

"Shall we say—shall we say eight weeks from to-night?" he asked. "That'll give us plenty of time. I'll pick out the show and buy the tickets to-morrow. You know, in some of these New York theaters you have to get tickets a thundering long time ahead. Nobody's got any engagement for eight weeks from to-night, have they?" he ended jocularly, as though naming a date in some post-historic period.

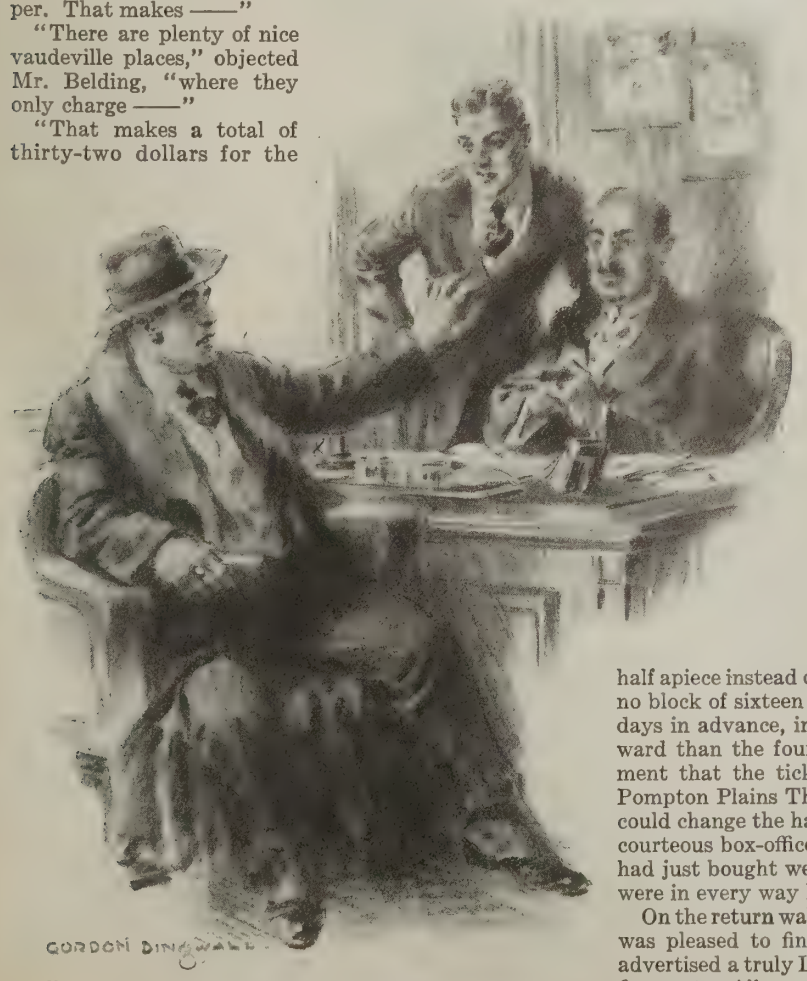
No one had.

All the way to town next morning Homer K. Twitty conned the theatrical proclamations in his newspaper. After an hour's careful perusal and comparison he decided that the show most favorably and also most extensively mentioned in the advertisements was Miss Manhattan. The management not only conceded, in print, that Miss Manhattan was far and away the Brightest, Bulliest, Best Show in New York, but it backed the claim by brief excerpts from the works of competent metropolitan critics, as published in no less than six leading dailies. This seemed to clinch it.

At noon, instead of lunching, Homer took the Subway at Wall Street for Times Square; whence, by the help of a telephone directory, it was no feat at all for a seasoned cosmopolite like himself to locate the desired theater. Five minutes later he was the owner of no less than sixteen ochre pasteboard oblongs entitling the holder to sit in any or all of sixteen contiguous seats in Row N of the theater's orchestra section on the night of January sixteenth.

A little to his annoyance, Homer learned that all seats in the first seven orchestra rows were two dollars and a half apiece instead of the advertised two dollars. Also, that no block of sixteen seats could be procured, even fifty-five days in advance, in any part of the orchestra farther forward than the fourteenth row. Not even a frank statement that the tickets were for the annual frolic of the Pompton Plains Thursday Night Duck Pin Bowling Club could change the harsh verdict. Still, by way of balm, the courteous box-office man assured Homer that the seats he had just bought were in the very middle of the house and were in every way highly desirable.

On the return walk to the Times Square Subway, Homer was pleased to find no less than three restaurants that advertised a truly Lucullan dinner for a dollar and twenty-five cents. All were within comfortable walking distance of the theater. So was at least one quick-lunch emporium.



"Never Mind! Duck Hunters are Usually Good Sportsmen. They'll Understand and Clear Out"

"The Notices All Said 'Stag,'" Snorted Reggie. "If Any of the Boys Have Brought Wives Tagging Along ——"

Homer endured, almost unterrified, the office manager's clever sarcasm as to his ten-minute tardiness in returning from lunch. He had proved worthy of his own self-confidence in arranging the forthcoming revel. And he was just a little proud of himself.

Reggie Ganz, at precisely the moment when his least-considered clerk was listening to the office manager's rebuke, was burrowing both arms into the sleeves of a seven-hundred-dollar fur overcoat, assisted by two reverential hat boys. He had just risen from luncheon. And he had risen conqueror. He had been host. His guests had been four fellow alumni of Harle University, who, with himself, had been appointed as entertainment committee for the forthcoming Harle Alumni Reunion.

Reggie, in undergraduate days, had not been wholly a success at Harle. He had brought thither nothing but money—of which he was inordinately and volubly proud—and a financially shrewd brain, which did not prove a popularity asset. He had seen poorer and less brilliant youths "make" one fraternity after another, to which his cleverness and cash could not win admittance for him. Class offices had also passed him by. He had all but failed of ingress to the Harle Club after graduation.

Ten years had spun along. Reggie had risen fast in the finance world. He had won a score of worth-while successes. Yet the memory of his college mediocrity had always rankled. Those same ten years had softened and materialized and turned rational the idealistic undergraduate standards of his classmates. Men who once had snubbed Reggie Ganz gradually discovered that he was decidedly well worth cultivating. His popularity grew—not only in the world at large but also in the Harle Club, to which he had so barely gained entrance, and in the Harle Alumni Association as well.

Yet the faintly bitter taste of that old memory never quite left him. He longed avidly for a feat that should destroy it. Money gifts of varying hugeness to the university had scarce half-achieved this. But those gifts, together with his business prominence, at last won for him a place on the Entertainment Committee, in whose hands was placed every detail for the mammoth gambol planned by the Association. It was a foothold. And Reggie Ganz proceeded to improve it. To-day, at this first meeting of the committee, he had secured for himself the chairmanship. He had also persuaded his four slightly bored and easy-going and overbusy colleagues to depute to him the bulk of the initiative in organizing the reunion spree.

From the luncheon he drove direct to a theater; summoned the house manager to his presence, and, check book on knee, proceeded to buy out the whole house for the night of January sixteenth. He furthermore arranged for the decoration of the place. And he departed thence with a strong letter of introduction to the company's manager. For Reggie had wonderful ideas as to Harle lines, gags and interpolated song verses, and he yearned to pass along his commands for these, without further delay. One trivial discord alone marked the harmony of his interview with the house manager. That followed on a consultation between the latter and the box-office man. After which the manager said apologetically:

"I thought I was playing safe, Mr. Ganz, in promising you the whole house so far ahead. Six weeks is as long in advance as we generally have any sales at all—except to a few speculators, and we can always fix them if we have time enough. But it seems somebody came here an hour

ago and bought sixteen seats in Row N for the night of January sixteenth. I don't understand it. The man here tells me he doesn't think the buyer was a speculator. He said something about a social club with a queer name, like The Duck Hunters of the Pampas Plains, or ——"

"Never mind!" interrupted Ganz. "Get rid of him. Offer him a bonus on his tickets or change them for some other night. If you can't do that, let him and his fifteen duck shooters come to the show, and I'll buy 'em out or explain why they can't come in. Duck hunters are usually good sportsmen. They'll understand and clear out. Leave that to me if you can't lose them any other way. You go ahead with the rest of the business."

During the fifty-four days that followed, Reggie Ganz toiled and planned and bullied and coaxed and spent money with both hands in a way which, by all rights, should have crowned him the fictional Napoleon of Wall Street if he had lavished half as much cash and effort in the improving of his own brokerage firm. Under his fierce manipulations the amorphous germ known as the Harle Alumni Reunion took on clearly defined and most attractive shape.

The theater decorations were to be a masterpiece of three great decorators' skill. The seating arrangements—minus sixteen—were little short of sublime. A former President of the United States, three Cabinet members, the president and the president emeritus of Harle University were to fill a lower stage box. The storage room under the auditorium was fitted as a bar de luxe.

The chorus of Miss Manhattan was rehearsed, to tears and hysterics, in the Harle Marching Song, which was to close the performance. The first comedian and his feeder were pat with the fifteen Harle gags written by Reggie Ganz. The second comedian had learned and blasphemously relearned the two interpolated Harle verses in his topical song. And—crowning achievement!—the prima donna had been lured, by managerial cooings and Ganz jewel gifts, into substituting for the words of her wonted entrance song an original lyric laudatory of Harle. This song had been written by Reggie Ganz himself. It was the capstone of his lifework. It represented all that was best in lyric poetry, almost as fully as Swinburne and Tennyson, in reverse conditions, might have stood for the last word in financial juggling. The song began somewhat like this:

Come, boys! On this festive night
Let's forget each brawl and quarrel.
Let's unite for dear old Harle!
Come, boys! View in mem'ry's light
Those happy days gone by.

Then followed the refrain—a pretty thing, copies of which were to be placed in every seat, so that the "Come, Boys" could join in, more or less intelligently:

For with joy and with pride
We do stand side by side.
Now and forever
Old Harle sticks together
In bonds of true friendship so tried.

And there was more of the thing—five verses more. One or two of the verses would have sounded just a very little more congruous in a barroom than in a theater. Not that they were an absolute or unforgivable kick in the stomach of decency; but they were, at the very least, what professional entertainers vaguely term "club stuff."

Reggie was justly proud of his song. He had laughed very loudly indeed, no less than four times, while he dictated the final polished copy to his stenographer. He had also prided himself on his delicacy in sending for one of the office's male stenographers for the job. You see, Ganz was always a gentleman.

At any rate, he was a "perfect gentleman"—which amounts to almost the same thing.

A Broadway restaurant's entire second floor had been requisitioned for the supper that was to follow the show. And here again Ganz' genius shone like a day star.

Reggie was draped majestically athwart an angle of the theater's bar de luxe—having looked upon his work and having seen that it was good—half an hour before the scheduled rise of the curtain. A hundred fellow alumni were honoring the bar with their presence and warming up for the performance. In the cavernous foyer above, two or three hundred more Harle men were lounging in loquacious groups, acting as a volunteer reception committee—a committee swelled every minute by newcomers.

"I Heard Your Offer. And I Turned it Down. Now it's Up to You to Listen While I Put My Terms"

Then, into the glassy pool of harmony, plumped the stone.

An usher, dispatched by the house manager, winged a downward flight to the bar and there sought out Reggie Ganz.

"Excuse me, Mr. Ganz!" he broke in on one of Reggie's best-told anecdotes. "Mr. Comyn sent me to ask you whether any women were asked to this party. He understood you to say it was stag."

"Women?" grunted Reggie. "Women? What women? Who?"

"There's eight of them up there in the foyer," reported the usher, "along with eight men. They all have tickets. They were starting to go in; but Mr. Comyn got them to wait while he sent for you. He says ——"

"Women?" snorted Reggie. "Good Lord! The notices all said 'stag.' If any of the boys have brought wives tagging along —— Here! I'll go up there with you and straighten it out. That song of mine and some of the gags would sound sweet to a bunch of women, wouldn't they?" he appealed to one of his lieutenants as he departed.

The foyer—aflame with Harle colors—was nearly full of jostling, babbling alumni. One knot in the center had apparently taken a running start for the gambol, and was blissfully singing an undergraduate air, replete with those fearsome close harmonies technically known as "barber shops." In a far corner, herded in a pathetically out-of-place covey, were eight men in business clothes and eight women whose costumes were irreproachable in subdued neatness. In brief, and to end the killing suspense, that lucky corner held the flower of Pompton Plains' beauty and chivalry; in other words, the Pompton Plains Thursday Night Duck Pin Bowling Club—and wives. Particularly "and wives."

The eight women, as I have hinted, were endued with clothes chosen for serviceable decorum and for church wear—the sort of toilet a self-respecting suburbanette should ever wear to a metropolitan function if she would make certain not to commit the crime of conspicuousness or be mistaken for a Sinning Sister. Yet, in this jocund assemblage, the eight were just now attracting more notice than would a pony ballet at a directors' meeting—a fact whereof they were horribly conscious.

It was the climax of Homer K. Twitty's annoyances—this delay. His vexations had begun nearly two months earlier, when his proud announcement that he had bought seats for Miss Manhattan had been right sourly received by his fifteen prospective fellow revelers. In the first reaction from the dash of enthusiasm that had pledged them to the expedition they had been prepared to cavil at anything. It appeared that none of them wanted to see Miss Manhattan—even those who had never heard of it.

Mrs. Hinkle—a literary lady who wrote Social Whispers for the Pompton Plains Palladium—had been told the piece was immoral; immorality, of course, being in inverse ratio to length of skirt. Mr. Belding had read that its prima donna was the heroine of a fascinatingly shameful divorce case. Others of the circle contributed similar patches to the wet blanket.

Mr. Threbble glumly declared he would greatly have preferred to see the all-star revival of dear old Pinafore. Whereat the entire remaining fourteen at once decided that they, too, would infinitely have preferred to see the all-star revival of dear old Pinafore; in fact, they would rather go to that than to any other show in town. But, of course, it was too late now.

The dollar-twenty-five dinner brought the next serious jar to Homer's nerves. During the soup course Bertha had seen a woman at the next table toying with a Vienna roll. And she noticed that she herself had neither bread nor butter. She called Homer's attention to the deficit. Homer, as master of ceremonies, gravely chided the waiter for negligence, and ordered rolls and butter all round.

Then Mrs. Hinkle was so pleased with her casserole squab that she asked for another helping, as did her husband and Mr. Threbble. The dinner took on a belated gayety, which it sporadically maintained until the bill was presented. Then followed gloom, for an extra charge was made thereon for bread and butter. And the three extra portions of squab were appraised at no less than forty cents each.

Thus the twenty-dollar dinner cost twenty-four dollars and forty cents—completely wiping out the two-eighty nest egg for next year's outing and putting a one-sixty crimp in the five-sixty supper fund. Nor was the waiter at all grateful, or even gracious, at sight of his princely two-dollar tip.

Then came the walk to the theater—a promenade marred by a scurry of rain and by the fact that no one had an umbrella or rubbers. And then, as Homer K. Twitty was marshaling his disgruntled convoy past the theater's door man, came the inexplicable halt and the request to wait.

Cranky, bewildered, volubly complainant, Homer's fifteen convives huddled in their assigned corner, dividing their time between angry questionings of their guide and scared glances at the hilarious throng of men who surged and eddied through the foyer.

SUPES AND SUPERMEN

By ROB WAGNER

PHOTO. BY COURTESY OF THE MAJESTIC RELIANCE STUDIO

Old Soldiers Have Lots of Chances to Fight Over the Battles of Long Ago

EVEN for experienced travelers like Dunc and me the surroundin's at the studio were quite strange. It seemed like there was a fête or a festival, or sunthin', goin' on, such gayety and joshin' and cuttin' up as there was. At other times I couldn't think of en'thin' except a great big circus—what with so much canvas, sawdust fillin' the mudholes, folks in all sorts of bright-colored costumes, and fellas sellin' hot dogs, ice-cream cones, and things. It was a gay place, but confusin'. Everybody seemed to be doin' sunthin', or goin' to do sunthin'; but nothin' ever happenin'. To further remind you of the circus, every once in a while, when the wind was right, you got that Barnum & Bailey bouquet from the animal cages at the other end of the lot.

Dunc and I were jest beginnin' to like the place when, with about fifteen other fellas, we were ordered into automobiles and set sail for Bear Valley 'way up in the high mountain. Now when you learn that Bear Valley is where they make all the snow pictures, you will understand how happy Dunc was, who had come out to California to be warm. Though always cold, Dunc is a game boy; and when he discovered this horrible fact he never batted an eye. This was pretty brave, for we had been told that we were cast for a coupla fool inmates of a sanitarium where the patients had to amble about in the snow naked but for a towel.

Tricks of the Trade

THE story was supposed to be a comedy; but the fella who wrote it must 'a' been a cold-blooded devil, for if you'd 'a' seen ten or twelve of us poor wops sittin' round in steamer chairs, in two foot of snow, with nothin' on but bath towels, eatin' icicles and readin' magazines, like we were at Palm Beach, you'd 'a' thought that the human race had gone nutty. But that's what we did; and, furthermore, we pretended to like it—for we were drawin' five a day, and we didn't want the director to think we were short sports.

Now Dunc has a pretty grim sense of humor himself, and he pulled some good stuff in one scene, usin' me as the butt; and the director liked it a whole lot. He told me on the way back that we made a right good team, and he guessed he could use us again in comedy.

It was rather rough for our first job, but the adventure was worth while, and we learned a lot about our new life. Also, we made friends with several of the other fellas that were workin' extra, and they tipped us off to no end of things that were valuable to know.

For instance, a few days later we were lucky enough to be taken on for a great big dramatic story that would be about four weeks makin'. In one of the interior sets the director called out: "Half of you guys beat it, and the rest stay on for a close-up." Old Man Purdy had tipped us that if such a demand was made to beat it; and we did.

"Always make an exit," he had told us; "for if you make an exit you'll have to make an entrance, as they'll need you for other scenes. When people exit from an interior set the continuity demands a picture showin' 'em comin' into the street. But when a scene dissolves out it is ended, and the services of those boobs remainin' for the dissolve are likely to be ended with it. You'll notice that the new ones stick round, hopin' to be in the picture as much as possible; but the old-timers duck. And, above all, side-step the close-ups, for a close-up registers your face; and if it is once registered you are liable to be canned for all subsequent scenes. Suppose, for instance, that you had appeared in a street scene in France as a peasant—it wouldn't do to see the same face, in a few minutes, peerin' out of the Tower of London. No, my lad; it would be a bum director that would have a French peasant sing in the Marseillaise, and then register the same mug singin' God Save the King! If an extra is real keen he can often work in every scene of a five-reeler. So we old wheel horses shy the close-ups."

We soon learned that the extras had an elaborate code and technic of their own. Furthermore, they study their directors in a way that's amazin'! They get to know all their whims, dispositions, fancies and weaknesses—also, where they are strong.

"You can't pull en'thin' on Mills," a character man said to me one day. "That son-of-a-gun can pick a sleeper out of a crowd of two thousand!" I learned the truth of this later, when, at last, I got on regular at his studio. One day a fella came up and asked him for work in a picture that was startin' the followin' Monday.

Mr. Mills and the Cut-Up

"NOT for one foot of film," replied Mr. Mills. "I used you in that battle scene out in Griffith Park last August, and you laughed when they knocked your king off his horse. You thought because you were one of five hundred that I didn't see you. No; you won't do, young man; my work is too hard and serious to fool with any cut-ups like you."

It's men like Mr. Mills, though, that make actors outa extra men; and if a fella has any ambitions higher'n jest checkgrabbin', he's lucky to hook up with directors like him.

In a big scene last summer Mr. Mills wanted to show a crowd watchin' a woman burnin' at the stake. Some directors would 'a' let us rave and tear and sprain our faces

PHOTOS. BY COURTESY OF THE LASKY COMPANY

Even a Knight Grows Tired of Wearing "Tin Cans" All Day

Dare-Devils are Sometimes Hurt in Spite of Nets

tryin' to record horror. Not so with this director. He first addressed the crowd, and told us what was to happen, and what he expected.

"The fact is," said he, "that all those attendin' a burnin' would not show horror. Some would be fascinated, some pale and starin', a few would be made ill; and always at sech times there would be several women faintin'. Now I put it up to each of you, individually, to show how you would behave in the face of such a grewsome tragedy."

That, of course, put us on our mettle and gave us sunthin' to think about. When he called for a rehearsal I give you my word that, as he stood up on the platform beside the camera, shoutin' directions, he did not miss the expression on one face in all the two hundred before him.

"That's fine, madam; turn your head. It's horrible!—Good, man; jest stare and bite your nails.—Here, you in the yella jerkin, cut out muggin'!—Mr. Ford, take out that man in the blue cape.—Fine, men; fine!—Willie, step out of the picture; you don't seem to understand.—Splendid, Harris!—Hey, you! You in the red cloak: Do you think they are roastin' peanuts?—Mr. Davis, tell those men in the doorway that it is their pay checks that are burnin', and perhaps they will show some interest.

"Great, Miss Harvey! Give her a hand there, boys. Can't you see that she's all in?" And so on.

There's one thing about workin' for Mr. Mills—you feel that you are learnin' sunthin'; and if you do good work it will be noticed. But there are some directors that extra men don't respect, or jest naturally hate; and they look for any chance to make monkeys of 'em. These are the loud-mouthed, profane or bellyachin' kind, that keep bawlin' out the cast, or makin' them so nervous that they can't work. I've seen girls cry themselves into hysterics when one of these mutts got temper'mental. You can't go bawlin' out a lotta fellas that are perfectly willin' to do the right thing, if they know what it is, without gettin' a lotta goats. Many a scene has been crabbed because the extra men were gettin' even with a director that had been abusin' 'em.

Up and Down the Social Scale

SOME fellas jest naturally go to pieces when they get roasted in front of the bunch. I've stood beside men who were shakin' all over, they were that nervous. There are certain directors who realize that actors can't do well when they're all worked up and excited or mad; so they make it a point never to tip off their own nervousness or bad temper. The camera man is the guy that gets it then. I know one director that is apparently the most genial fella in the world, but, all the time he is smilin', under his breath he is growlin' and dam'in' us up hill and down to the camera man.

If directors were interested enough to know what the extras thought of them they'd learn a lot of things; but there are only a few big enough to ever ask us our opinion of a bit of action, or en'thin' else. In some Civil War battle stuff a while back, the director had a young army capt'n assistin' him, so's to have the technic correct; and, because the capt'n acted in a know-it-all way, he thought he was wise to the etiquette of soldiers at all periods. Now in the scene there were some old codgers from the Soldiers' Home, at Sawtelle,

PHOTO, BY COURTESY OF THE LASKY COMPANY

Only Professionals Can Do it Like This

and they saw that the action was wrong in many ways; so one of them timidly went up and told the director that he'd like to make a suggestion. He was dismissed very curtly, without a chance to say a word. If that fool director had listened he would 'a' learned—in time to save a fifteen-hundred-dollar retake—that privates in Civil War times did not salute their officers at all as they do now; that and a lotta other things which his capt'n was too young to know.

The thing that surprised me when I broke into the pictures was that extras had a social caste quite as well defined as the stock actors and the leads. The fella who digs ditches or peddles fish, and occasionally kicks into the pictures in the mob stuff, is not considered an extra man—this is a profession in itself. Extra men carry their little kits jest like piano tuners and doctors—grease paints, wigs, toilet articles, and what not. They go from studio to studio as the shiftin' needs require 'em; and, as they are known everywhere, they always get first call over the floaters that want in because they are in need of a few dollars.

Many extra men specialize on certain stunts or in characters that they are specially fitted for. A fella like "Dress-suit Charlie," for instance, has almost a clairvoyant hunch where they are goin' to do ballroom stuff; and, as he is a doll-baby and a good dancer, he's probably atmosphered in more society pictures than any fella in the country. The "soup and fish," as we call the society stuff, pays five dollars a day. Then, a fella like Old Pop Purdy is in almost perpetual demand for judges and old-man parts. He's specially good in the Si Perkins stuff, because he can take out his teeth.

This reminds me that there is a regular scale in this business.

The cheapest work is mob stuff. Crowds are usually furnished by the employment agencies; and, as no costumes are necessary, they go on jest as they come. The pay is a great big round iron dollar a day, sometimes carfare; and usually lunch, which consists of a sandwich, pickle, wedge o' pie, and a cupa coffee. As I said before, these mob folks are not extra people in our definition. The leads and stock don't think much of us socially; but, like the office boy who had the cat to kick, we've got one group lower'n us.

The cheapest regular extra work is the soldier stuff, payin' two dollars a day. These men are mostly recruited from the fellas that have served their enlistment in the army or deserted it. In the big battle stuff, where they have to hire thousands, the regular soldier extra men are put in charge of squads to drill and handle; and for this work they get five dollars.

"Atmosphere" is the official name of the next group. These are the ones who work in costumes furnished by the studio; and the pay is three a day. Where a fella furnishes his own spangles he hits the pay check for five. Here's where the boy with the dress suit and the girl with the ball gown cut in.

Various Parts, Various Prices

A SMALL "bit" also gets five a day; but a good bit, such as a butler, draws seven and a half. There are some fellas so suited and intended for certain characters that they are always in demand for those parts, and nothin' else. I know one chap who does nothin' but buttle in the homes of the rich, and he's always wantin' to be cast for adventurous parts.

It must be that when God makes a man he sometimes says to himself, "Now this fella will be an umberella mender and this fella I'll make into a butler," and so on; for there are some in this business who couldn't change from what God made 'em up for, with all the clothes and grease paint in the prop. room.

There is an old colored fella, ownin' a bunch o' liveries, who has acted as coachman, footman and manservant in half the pictures in the country. Old Pop Purdy is rarely outa work, though his dream is of the day when he will be taken in stock. The enthusiasm he has for his parts, no matter how small, is almost pathetic. Even when he's jest doin' atmosphere, he's in character—if he has to invent the part.

So well understood are the scales for the different kinds of work that extra people never talk of the characters they're portrayin'. You hear one fella call to another: "What yeh made up for, Bill?" "Three dollars," he replies; "but to-morra I'm workin' in five-dollar stuff, and next week I've got two days at the Eureka doin' seven-fifty."

The highest-priced extras are the rare types and the dare-devils. These latter are the ones who will make bad falls and take hard beatin's, and do about en'thin' they are told to. The Climax has a fella who's a dare-devil and a half; for he told me himself that he was half Indian, half Mex. and half Chink. He's not what you'd call prepossessin' in appearance, but he'd take a high dive into hell

PHOTO BY COURTESY OF THE MAJESTIC RELIANCE STUDIO

Here's Where the Boy With the Dress Suit and the Girl With the Ball Gown Cut In

PHOTO. BY COURTESY OF THE LASKY COMPANY

Society Stuff is Called Working in "Soup and Fish"

for a ten-dollar bill. He's got long black hair; so he often doubles for women who have to be handled rough.

A funny one happened last spring. Hawkeye was doublin' for a dear little baby doll that had to be thrown out of a window by the villain; and it was necessary that he must have his back to the camera during the whole action, for it was all downstage stuff. He did a back fall that was a perfect wonder, landin' flat up in a bed of flowers, right in front of the camera; but his attitude was such that—— How will I say it? Well, anyway, ladies are not supposed to wear leather garters—and the picture was spoiled, the worst part bein' that a retake was impossible because Hawkeye had to go to the hospital with a sprained back. That poor devil spends about half his time in splints.

A Short Engagement as Uncle Joe

THE other high-priced extras that I spoke of—the rare types—also draw down ten a day; but they are used only on unusual occasions. Once, when we were makin' a congressional picture, the director wanted a type that looked like Joe Cannon. After scourin' the whole town over for a week or more, one of the assistants dug up an old codger on the West Side who was a dead ringer for your Uncle Joe. He had spent his lifetime as a minister in the service of the Lord, but when he was asked to play the part of Joe Cannon he got all swelled up on himself. Perhaps he was flattered to look like anyone so prominent, but most likely he was sufferin' from the same itch that everyone has to act in the movies. If someone tells you that he once knew a fella who was so modest that he didn't want to see himself in the pictures, and if you've got the patience to run down the rumor, you'll find there is no truth in it; for—take it from one who knows—"there ain't no sich animal."

The fall of this dear old fella was complete. He got work for only two days, but those two days were enough to ruin him for life. After his hour of dramatic intoxication he simply couldn't go back to the prosaic job of herdin' human sheep in the straight and narrow path, specially as some of 'em had got lost in the movies. No; a new wine had got into his veins and it was good night flock and everythin'. He was a movie actor now, by heck! And, s'help me, he's been warmin' a bench at the studio ever since. I suppose he's hopin' some day he'll be reëlected to the House.

Anyway, there he sits, day after day, without a chance in the world, while a lot of nice white sheep are gettin' all soiled up jest because their shepherd has deserted 'em.

When this movie bug once gets into the system it's sunthin' awful! There are a lotta corkin' big brawny brutes who've lost their usefulness as gasfitters because they got on once in a mob scene, and are convinced that Hobart Bosworth is holdin' 'em out of a job because of his jealousy and his pull with the management.

"Dan," said Dunc, one night when we were playin' cribbage in that dump we first lived in down on Temple Street, "let's kick into this game seriously and see if we can't land somewhere. A lotta people think that the actin' job is a joke, but I've come to the conclusion that anyone who can add any pleasure and joy to this miserable old world is a high priest. And when you see the number of ex-prize fighters that have deserted real drama and have made good in comedy, it would seem that we ought to do as well as a lotta infightin' welterweights."

So we determined to learn all we could, work like pups, save our money, and see if we couldn't attract some favorable notice. First, we got us complete grease-paint outfits and began to study make-up. Dunc developed some amazin' results. He is no Mary Pickford as to looks—nor am I built like Annette Kellermann; but we got so's we could give some of the professional beauts a battle. At first, my face had about as much mobility as an iron dog; but Dunc would rehearse me by the hour in different expressions, until I got so's I could register about every emotion a fella's likely to have, and a few unlikely ones, such as bein' asked to play the lead in a five-reel feature. Gradually we began to gather a wardrobe—dress suits, Western stuff, and such, hopin' some day to be equipped as well as the best of 'em. During the two years of our accumulations we had a good many ups and downs; but, from the first, one or the other of us had sunthin' to do.

The greatest trouble in this game is holdin' up a decent wage scale. There have been all sorts of organizations and unions, but they usually end up at an employment agency, and then peter out. The low scale is due to the number of idle people who will work for almost nothin' jest to be occupied. Los Angeles is full of folks who have come out here for their health, or to sit in the garden and get warm. Many of them have small incomes, and don't actually have to work; but they want to be occupied, and what could be more fun than to act in the movies! Even rich society people crab our game by offering to work for nothin'; they consider it quite a lark. If a studio wants a buncha well-dressed atmosphere, like as not the assistant director will call up the social secretaries of some of the hotels and tell them to send over a coupla loads of goldfish. The social secretaries will suggest the scheme to a well-dressed bunch of rich ones from the East.

An Expensive Set Threatened

WILL they go? Lord, you couldn't keep 'em out with fly screens! If they knew that perhaps they were holdin' out of a job some poor girl that had gone broke buyin' a wardrobe for jest such chances, maybe they wouldn't go takin' her job away from her.

Some of the cheap studios, knowin' that we can't organize, take advantage of that fact and make us stand even their own losses. When we were new and ignorant at this business we got work in a big picture that was usin' a whole lot of extras. One day we were all dressed for our parts, but the light was bad; and the director, after keepin' us standin' round until three o'clock, came out and said we were dismissed, and to report the next day. Right then there was trouble. A few belligerent lads, led by Dunc, went up to the office and told 'em if we didn't get our pay we would wreck the set—and we meant it.

Furthermore, we gave 'em ten minutes to do it, for we didn't want to get in a jam with the police, and we knew that they couldn't get out to the studio from town in less'n half an hour. That set cost upward of thirty thousand dollars; so they thought it cheaper to pay us than to take any chances.

We were waitin' one day in the yard of a new studio with about thirty other fellas when a chap, named Bernstein, began tellin' us what dubs we were not to organize; and he got into quite an argument with a great big lobster called Squinty. While they were hot at it, the employment director came out and said he wanted twelve men; but all he could pay was a dollar. Nobody made the

Fifteen Hundred Men Can be Rounded Up in a Few Hours

Tales From a Safe-Deposit Box

The Miracle Peddlers—By George Kibbe Turner

ILLUSTRATED BY ROBERT McCAIG

NOW and then, at the bottom of my box, I run across my five hundred shares of Telair; and there rise up again the man with the seal-lined coat, and the professor with his ivory-headed cane, and the banquet, and the unexpected one hundred per cent cash dividend. And I start smiling and then stop. I stop smiling, for I am back where I was then. I am twenty-two again. I have my first five hundred and seventeen dollars in the bank. I get my fifteen dollars a week. I am back in the world where clerks live—in that dull, flat, dun-colored, God-forsaken country, bounded north, east, south and west by fifteen dollars a week—and in mortal terror that I won't escape from it.

I see that thing in the box, and I am back in that old-time hardware store. It is the second day of January once more—closing time; and I stand there alone before the spot of light at the cashier's desk, in the dim rear of the old store, with my small blue envelope in my hand, and my heart thumping as I start to open it. I didn't open it there, as a matter of fact. I took it to one side, by the wall. I tore the thin end off with fussy fingers. And there it was, just the same as ever—three five-dollar bills. Another year—another endless year—at fifteen dollars a week!

I stood stiff and caught my breath and got my hold upon myself. That was the year we had planned to be married! I stood there for a minute or so. Then I crushed the thing into my pocket, envelope and all, pulled my hat down over my eyes, and started out into the blue wintry street, half-way between tears and murder.

And there, on the sidewalk, in his sharp-pressed clothes and a new and costly silver and gray tie, stood Charlie Seavers, the dressy clerk from up in the retail end of the store, drawing on his gloves.

"Going my way?" he asked.

I jerked my head down in answer.

"Well, how'd they treat you?" he asked, after a block and a half of silence.

I didn't answer him.

"Me too," he continued cheerfully. "Same old thing!"

And we walked on again.

"Take it from me," he started up again, "there's nothing in it. The first chance I get, fare thee well! I've been here six years now, and I know. They never raise you." And he stopped upon the sidewalk.

We stood before the Orgillon, our proudest and most expensive new hotel.

"Come in here a second!" said Charlie. "Please! I want to see a man. Then I'll go on with you."

So we went into the glistening lobby, I wondering who it was Charlie could be going there to see.

"Mr. Kenyon in?" he asked the clerk, and stood in doubt, rearranging his new tie with his thin fingers, when the clerk said no. And then, back behind us, came this round, clear barytone voice; and I turned and saw the man in the seal-lined coat.

He came on ahead—a big man with a brown mustache and a smooth, ruddy, hotel-fed face above the sleek seal collar—holding out his hand and smiling. And behind him, almost a head shorter, a squat, square, bearded figure in a dingy overcoat and a round astrachan cap came poking in with his ivory-headed cane, looking straight down before it on the floor.

"Just in from Boston?" asked Charlie.

"Yes," said the big man.

"How's it look now?" asked Charlie, watching his face closely.

"Couldn't be better."

I stood there—out of it. On the other side stood the man with the black cap, like the twin brother of gloom. Then Charlie introduced me.

"I'm certainly glad to meet you," said Mr. Kenyon. "Any friend of Charlie's stands high with us." And he turned round to his companion.

"Professor Mudge," said he, "I want you to meet these boys—friends of mine. Charlie, here, you've met before."

The man looked up and grunted how-de-do.

"The professor comes up here now and then," Mr. Kenyon explained to me, "to tell our stockholders about his invention."

"You Boys are Coming Up to the Room With Me for a Minute Anyhow"

The professor grunted something or other and turned and poked along to the elevator.

"I'll have to be going," said I.

"Oh, no," said the man in the seal-lined coat heartily, "not on your life. You boys are coming up to the room with me for a minute anyhow." And he ushered us both into the elevator, talking friendly talk.

But not a word out of that other man, that professor, all the way up! He stood there, eyes down, cane set firmly on the floor; stumped off the elevator at the landing and headed for a door.

"Good night," he said without even looking up.

"Aren't you coming in with us, professor?" asked Mr. Kenyon.

"No."

We padded down the soft carpets; the two keys clacked loudly through the silent hall; we padded through into the big, still, stuffy bedroom.

"A real gifted conversationalist, eh?" said Mr. Kenyon, tumbling off the costly coat onto the bed. "The old man? You bet. Social to a fault. Sit down, boys! Here, try one of these!" And he handed out two fat dark cigars. I glanced secretly at the band. It was what I thought—a twenty-five-cent cigar. I had never smoked one in my life before.

"Yeh," said Mr. Kenyon. "That's his one fault—always just the same. Kind and friendly as an old blind dog with a toothache. The original crank!"

"Crazy," stated Charlie, lighting his twenty-five-cent cigar with great care.

"Crazy, yes, maybe!" said Mr. Kenyon. "But not half so crazy as I am to-night."

"What do you mean?" asked Charlie sharply. "Is it going good?"

"I mean I believe it's going through!"

"Whee! Good evening!" said Charlie, getting up and grabbing him and starting out to dance with him.

Mr. Kenyon danced three heavy steps and stopped and took out a cigar from the arsenal in his vest pocket.

"Yep," he said. "I believe it. We've got 'em going."

"Your friend know about it?" he asked Charlie.

"No."

"We think we've got something good—eh, Charlie?" he explained.

"Do we?" asked Charlie, sitting down and rearranging his new tie. "Tell him!"

"Of course," said Mr. Kenyon, "this is more or less personal to you as Charlie's friend. Even our other stockholders don't know all this yet."

"Of course," said I.

"You've probably heard all about that original telephone stock," said he—"how it took them all from the grocery counters and washtubs and made them millionaires."

"Yes."

"Well, that's what we think we've got—and then some. If it goes through!" he said.

"Tell him," said Charlie, lying back in his fat easy-chair till the top of his gray stockings showed under his sharp-pressed trousers, and sending out a whiff of slow blue smoke from his twenty-five-cent cigar. "Tell him just what it is!"

"It's Telair," said Mr. Kenyon to me. "Maybe you've heard of it. Just a little thing your old friend here, the professor, got up to take the wires off the telephone poles. That's all—a new kind of wireless telephone. The thing they are all after nowadays. Only this one of ours works—or we think it does. And, what's more, we think they think it does—the way they're acting."

"Who?" I asked.

"These telephone people."

"Oh," said I.

"Look!" said Mr. Kenyon, explaining it to me. "You get some idea of what we've got by this: Suppose you went to the railroads of this country and said: 'Here. Take up your tracks! You don't need them. We've got something here that lets you travel without tracks.' Would there be something in it?"

"There might be!" said I sarcastically.

"Well, that's about our proposition to these telephone people. We say: 'You come with us and take down your poles and wires. We will fix you up to use the air.' What do you suppose we'd save them? If it works, I mean always," said Mr. Kenyon, "you understand."

"Millions," said I, "I suppose."

"You suppose right," said Mr. Kenyon, "the first time—only not enough. And what we save them isn't all theirs; not so you notice it. Now and then a dollar comes to us from royalties—eh, Charlie?"

"Fare thee well," said Charlie, and shook his head.

"Yes, we're crazy, I guess," said Mr. Kenyon. "I wake up every morning believing it, more and more. Well, boys," he continued, getting up then and dusting the cigar ashes from his vest, "I'm sorry, but I've got to go now. I've got an engagement to dinner."

And we got up too.

"I tell you what you do," he said to Charlie: "You come round to-morrow night and take dinner with me, and bring your friend, too, if he'll come. Certainly I want you," he said with his hand on my shoulder. "And I'll promise you a good dinner, won't I, Charlie?"

"Will you?" said Charlie with a wide smile. "Fare thee well!"

"That's settled," said Mr. Kenyon. "I'll look for you."

"How do you like him?" asked Charlie, when we got outside.

"He seems like a pleasant fellow," said I.

"He's a prince!" said Charlie.

"What is this thing you've got?" I asked him. And he told me more about Telair.

"It's all his company—George Kenyon's, you might say, and the old professor's," he said. "It's the professor's invention—yes. But George Kenyon furnishes the capital. He's the capitalist in the thing."

"Is he very rich?" I asked.

"Is he rich—good evening!" said Charlie. "What would you think?"

"How'd you get acquainted with him?" I asked, wondering.

"Oh, I got to know him," said Charlie mysteriously, "in this new company. Some people I knew got in with him when he first came down from Boston."

So we left each other at the corner and my own mind fell back again from the Hotel Orgillon, and the lights, and the twenty-five-cent cigars, and the millions, and the capitalist in the seal-lined coat, to the dull misery of my own life again—to fifteen dollars a week and the necessity of going home to tell Barbara we weren't going to be married. It kept coming back over me all that next day, every time I saw Charlie Seavers waiting on the customers in the front part of the store.

"Do you suppose," I said to myself, "he's really got into something that will make a lot of money—through getting acquainted with this man, that capitalist? Things do happen that way, of course."

Then, at half past six that night, we started for the Hotel Orgillon again.

"This is the life!" said Charlie, taking me by the arm; and we went in to find Mr. Kenyon, and down for dinner to the Dutch Room in the basement—the last word in the night life of our city.

"What do you see?" asked Mr. Kenyon, studying the menu.

We certainly had a wonderful dinner—for us anyhow—and cocktails and table wine with it. We devoted ourselves to eating it, not talking much; Mr. Kenyon getting redder and Charlie pinker as it went along—and I, too, probably, from the way I felt.

"Where's the old professor?" asked Charlie, when we lighted our cigars. "Still in a deaf and dumb fit?"

"Yeh," said Mr. Kenyon, and stretched in his chair, blowing out his first great chestful of tobacco smoke.

"Did I ever tell you how I first met him?" he inquired. "Oh, nothing much," he went on. "Only you'll laugh afterward! I was up here in Boston, after that last little deal of mine in that Tulsa Oil; and somebody told me about this old crank, out near Lynn, Massachusetts, who had this new idea in this wireless telephone thing. Well," said Mr. Kenyon, examining the end of his cigar, "I went out there and finally I found him—out in that old shanty he had—outside the town on the marshes. When I got there he was alone in that old shed, out there on those sick, smelling, empty marshes—alone, hanging out words on these terrestrial magnetic currents of his, and shooting them out over the Atlantic Ocean, and gathering in the others when they came back from Maine," said Mr. Kenyon, and stopped.

"Dreams! Dreams!" he went on, waving his hand before his face. "You ought to have been there."

"I'd like to have," said Charlie.

"I thought I'd struck the original nut, sitting on the edge of the world. I certainly thought he was crazy, or that I was. And then, when I got there he didn't even want to see me. Said he wouldn't!"

"Good evening! What do you think of that?" said Charlie Seavers to me.

"Why not?" said I.

"He was afraid!"

"Afraid?"

"Yeh, afraid," said Mr. Kenyon, examining his cigar again. "Oh, I tell you—you don't know it, but—we've got something in this thing like nothing else in the world. I'm not talking now about the money there is in it—or isn't," he said to me.

"No?" said I. My voice was just a little thick after that dinner.

"No," said Mr. Kenyon. "In the first place—and I bet you never saw anything like this before—the men that have come into this from the outside didn't have to risk a dollar to get their stock."

"Not risk a dollar!" said I.

"Not a dollar," said Mr. Kenyon, "until the thing is all done, the contracts made and the company on easy street. That's the first thing you notice about it," he went on. "And the second is we only sell just so much to a person—not over one thousand dollars to any one investor."

Charlie nodded seriously.

"Why is that?" said I.

"I'll tell you why," said Mr. Kenyon. "It's all the same answer—the professor! Because all the old man will have in this thing is little people."

"Little people!" said I.

"Small investors—little people," explained Mr. Kenyon.

"Why was that?" I asked again.

"For the simple reason he didn't want the big ones. He got burned once by them. They almost got him," said Mr. Kenyon, "and he was afraid of them. Yes," said Mr. Kenyon, "afraid. And it's simple enough when you know about it. You see, this professor—you saw him—he's one of those strange eccentric characters like these scientific fellows are apt to be—a regular baby, when it comes to business. And when he had got this thing perfected, some big fellows in Boston got ahold of it, and formed a company, and got control of the stock, and they just did miss getting it away from him."

"I see," said I, getting interested.

"So finally when we came down to our agreement—he and I—that made this company, there were two things: In the first place he was to have control of the stock—always—fifty-one per cent, and no big ones—unless you count me," said Mr. Kenyon laughing—"in it, at any price. Nothing but small people. That was his first idea—little people. And the second one was when we got them in we weren't going to sting them either. He'd been burned himself in this company business, he said, and he wasn't going to pass it on."

"How did you fix it finally?" I asked him. And he laughed.

"We fixed me," he said. "I was the thing that was fixed. I had to put up for it all finally—the capital for all the promotion expenses."

"All of it!" said I.

"All of it, yes. All the expenses, till I had sold the machine to somebody and got the contract signed. Oh, it's not so much," said Mr. Kenyon, looking off at a good-looking girl at another table. "A few thousand dollars. Oh, I take that chance, that's all, that I can sell it," he said, his eyes coming back to me again. "If I lose, I lose. If I win, I win big. Oh, don't make any mistake about that. If I win—if I sell it—I get something. I get my money back in the first place. I've got this allotment of the stock to sell to pay for the promotion expenses. And I get a quarter of all the stock for myself.

"Oh, no, I don't get off well at all, if this goes," said Mr. Kenyon. "Oh, nothing much, only about ten times as much as if the old man had handled it in the regular way with big people. If it goes, of course," he said. "Of course you can't tell, ever. No matter what you've got."

"Well, it certainly looks easy for the little people, the small investors," I said—"the way he fixed it."

"How is that, Charlie?" asked Mr. Kenyon.

"Ask me!" said Charlie, looking over at me. "Say, you ought to have been in on it yourself."

"Don't be too sure, my young friend," said Mr. Kenyon. "You don't want to start to count up yet."

"That's all right," said Charlie. His color was pretty high. "It didn't cost me anything, anyway—and won't, not till you make good."

"There's something in that," said I. I could feel my own face burning.

"You're right there is," said Charlie. "You know what I think?" His voice was a trifle mushy. "He could get in now if he wanted to," and he looked over at Kenyon.

"You know better than that, Charlie," said Mr. Kenyon. "You know the allotment here is all gone already."

"I Thought I'd Struck the Original Nut, Sitting on the Edge of the World"

"How about the Boston allotment?" asked Charlie.

"No, I'm afraid not," said Mr. Kenyon; "not there either. But if I do run across anything I'll let him know."

"I guess it wouldn't be much good," I said, "so far as I'm concerned, from the present state of my finances." And I thought of my bank account—my five hundred and seventeen dollars in the bank.

"Finances!" said Charlie. "Say, you ought to see some of the financiers."

And they both laughed pretty loudly.

"Miss Moshier," said Charlie; "and that Cressy, that minister from the Zion Chapel. Financiers!" said Charlie. "Fare thee well!"

"That will do, cut it out!" said Mr. Kenyon, stopping laughing finally. "It's a shame, in the first place, to laugh at them. They're good people—every one of them. But it isn't that altogether, either. Let me tell you something," said Mr. Kenyon, and he fixed his light blue eyes on me, "that maybe you don't know. You can laugh at small people. But when you go back and look over how almost everything big started in this country, you'll find it was the little people that started it—not the big ones. You'll find it started in the beginning with just some such crowd of small people as this is of ours—getting together nights after work. We all started small," he said, "when you come down to it—everybody that amounts to anything.

"Tell you what you do," he said to Charlie, when we got up to go: "Bring round our friend to our next meeting and let him see our crowd himself! And if I do get any wind of any stock in Boston, I'll lay it by for you," he said, shaking hands with me. "You can take it or leave it, just as you want to. It won't be enough to kill anybody, either way."

"Some dinner," said Charlie, outside the hotel.

"Yes," said I.

"It didn't cost him less than four dollars and fifty cents. And did you see him?"

"What?"

"Fifty cents to the waiter!"

"Believe me," said Charlie, "this is the life! And if ever this thing does come through, fare thee well, I'm going to live for a change. Gee, I certainly hope it does!"

He was just a little bit unsteady.

"And I hope he gets you a chance at it. I hope it isn't too late. But if it isn't, if you get a chance at it, good evening. You grab it!"

"Maybe you're right," I said. "Maybe I might take just a little."

"You will," said Charlie, "if you take my advice." It was about a week after that when he and I went up to that place where they held their meetings in an anteroom of the Royal Arcanum Hall. We stumbled up a little late, through the wide, dark, old-fashioned hallway to the fourth story, and went in and sat down in the back.

Mr. Kenyon and the silent professor and another man sat at a small wooden table in the front; and facing them ahead of us, the investors—the "little people" they had talked about that night at dinner. It was cold in there; everybody had on his coat. The third man at the table was talking, facing toward Mr. Kenyon.

"The minister I was telling you about, that Cressy, from that little Zion Chapel," said Charlie. "He's secretary."

"As I understand it, Mr. Chairman," this lean man with thick glasses and a heavy mustache was saying, "this lady would like you to explain just what you do with the money. We're talking about the ten per cent deposit made by the stockholders upon entering the company, I would state for the benefit of the newcomers," he said, looking at us, and sat down.

"I will gladly," said Mr. Kenyon, rising. The gaslight on the wall behind him flashed on a diamond stickpin in his tie. He still had on his seal-lined coat. Back of him there was some kind of charter, framed, upon the wall, with stars and spheres and dark figures in it; some secret society thing.

"I'm very glad to," he said to the tiny woman sitting toward the front.

"Miss Moshier, the one I was talking about, the dressmaker," whispered Charlie Seavers.

"Who's that with her?"

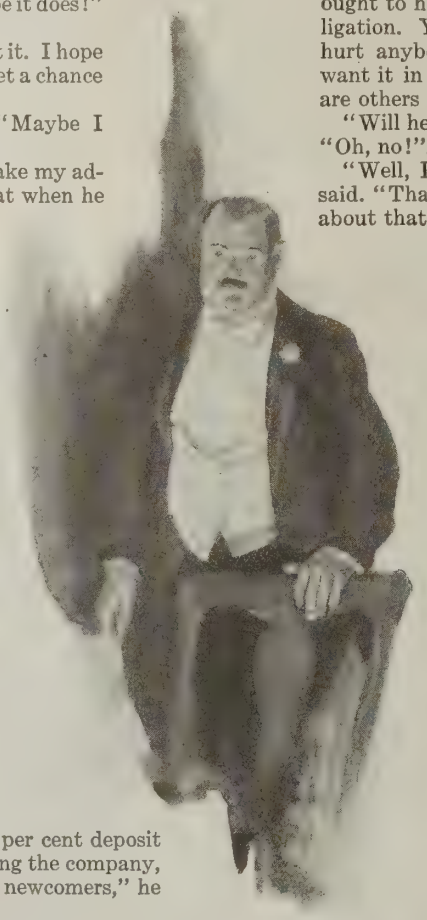
"Which one?"

"That other one—the fat one in black?"

"That's my mother," said Charlie.

"Oh," said I, and listened to Mr. Kenyon.

"It's very simple," said Mr. Kenyon. "It lies in the treasury until the contracts for the company—securing royalties for its inventions—are all complete."



"Go Right Ahead, Folks. I'll be Right Back"

"It is put in, not as an actual investment, as I understand it," said Mr. Cressy, the secretary, "but as an evidence of good faith on the part of the investor."

"Exactly so," said Mr. Kenyon.

"That's all," whispered Charlie to me, "a kind of deposit. Just ten per cent of your subscription."

"But what I mean is," said the dressmaker timidly, half getting to her feet, "just where is the real money? Where is it put?"

"Oh, I see. What bank is it in, you mean?" asked Mr. Cressy.

"Yes," said the little woman.

"In the First National," said Mr. Kenyon.

"Mr. Snaith's bank," explained the minister.

"Yes," answered the dressmaker, in a small voice, sitting back.

"That ought to be safe," said Mr. Cressy, and they smiled, and the little dressmaker moved uncomfortably in her seat.

"And I think, if you will permit me to say so," said Mr. Cressy, getting up again, "we are all to be congratulated, as investors, on having such an ingenious plan arranged for us—to be safeguarded in every way."

And after that Mr. Kenyon talked a little while in his hearty, friendly way.

"I don't want to say much now, friends," he said. "But I think at the next meeting I may have something you will want to hear."

It wasn't a very long meeting. It was cold in there; the dozen or so people in the wooden chairs, sitting huddled up together in their dark coats, were ready to get out. When they got up Mr. Kenyon beckoned to me to come up and see him.

"I've got that for you," he said to me, aside. "That stock!"

"How much was there of it?" I asked a little flatly. I hadn't expected that yet.

"Five hundred shares," he said.

"Five hundred shares!"

"Oh, don't get scared," said Mr. Kenyon, laughing. "It's not a hundred dollars a share. It's just a dollar. I ought to have told you that. And there's no obligation. You can take it or leave it. It won't hurt anybody either way. Only, if you don't want it in a day or two let me know. For there are others that will."

"Will he take it?" said Charlie Seavers for me. "Oh, no!"

"Well, I haven't got the money with me," I said. "That ten per cent deposit—I hadn't known about that before to-night."

"That's all right," said Mr. Kenyon, clapping my shoulder. "Come on now! Come on over!" he said, and then he led me over and introduced me to Mr. Cressy, the secretary.

"They got right after me to-night," said Mr. Kenyon to the minister, laughing, "with their questions. Didn't they?"

"They ought to," said Mr. Cressy. "If you had no more money than the most of us here have you'd be careful." And he laughed back.

"Go as far as you like," said Mr. Kenyon heartily. "You can't go too far for me."

Charlie Seavers took his mother home and I started out with Mr. Cressy.

"Are you coming in? Do you expect to make common cause in our enterprise?" he asked me. "I see. Well, I don't think you'll regret it, if you do. We've looked it up quite thoroughly, and we think we've got a sound thing—a very unusual one in many ways, with the possibility of immense profits. The original telephone stock—the original miracle in this kind, you may call it," said Mr. Cressy—"encourages us, of course, in that belief."

It was two weeks, probably, before that last meeting. Mr. Kenyon was in Boston at the main office, negotiating for his contract, and the professor back in Lynn probably. The only officer of the company I saw was Mr. Cressy, who came and told us about the progress that was made.

"Confidentially, according to my information," he said, "our contracts are now practically complete." And he showed us the letters from Mr. Kenyon.

"If you're going to get aboard," said Charlie Seavers, "it's about time you did it."

And right after that I had a letter from Mr. Kenyon, asking me what I had decided. And I sent on my fifty dollars and my agreement to take the whole five hundred.

"You'd be a fool if you didn't," said Charlie, "knowing what we know from the inside."

So I was there, a full-fledged stockholder, at that last meeting when Mr. Kenyon made his final report. It was still cold in the bare, small meeting room—apparently it always was—cold with the dead cold of a deserted house. Mr. Kenyon was fortunate in his seal-lined coat. The small investors, all out in force, sat before him in their worn black coats, on the little wooden seats, looking colder and dingier and sadder colored than ever. It hadn't struck me so much before. But there they sat—I could see them now—the little people Mr. Kenyon talked about; all permanent inhabitants of the world of side streets and double houses where the clerks lived; the residents of that flat, dismal, God-forsaken country bounded by fifteen dollars a week, which I myself was anxious to escape from.

But no one was really dismal or uncomfortable that night when Mr. Kenyon announced the closing of the contract for Professor Mudge's invention. They smiled at one another and moved about on the cold seats, with pleasure and anticipation, as Mr. Kenyon told them what he had done and made his estimates of the returns upon our Telair stock. I can't pretend to remember it all now. But starting first in the tens of thousands certainly as the equipment could be made, it ran straight up into millions, following the well-known history of telephone stock.

They sat fascinated by the thing—the millions. We all did, and especially one man—a retail butcher, Charlie Seavers said he was. I remember his face particularly—his fat, soft, sagging face, and his eyes that stuck out, as if he were strangling, while Mr. Kenyon made his estimates and Mr. Cressy rose up to confirm the contract with the documents which had been sent to him as secretary.

"Those who wish to examine them," he said, "should come forward after the formal meeting."

"And now friends," Mr. Cressy reminded us, after putting a vote of thanks to Mr. Kenyon, "it remains for us to do our part. Within a few days from now, according to our signed agreements, we must complete our contributions—the outstanding nine-tenths of our payments. After that," he said humorously, "all we need to do for the remainder of our lives is to lie nestled in the lap of luxury and reach out periodically for our dividends. But seriously," said Mr. Cressy, when the stir and smiling had subsided, "we must remember that all payments must now be made in three days."

"And before you go," said Mr. Kenyon, rising in his warm, princely coat, "just a word, folks. I don't know how you feel about this thing, but I feel good. And I think we've done a big stroke of work. And what's more, I think we ought to celebrate it! Now it looks to me, friends, this way. Three days from now your money'll all be in this company, according to your agreement, and I'll have got mine back by my contract. By Thursday I'll have the money and you'll have the experience, friends, as the man said," remarked Mr. Kenyon jocosely, and everybody laughed. "So, as far as I can see, there's only one thing to do. I've got to pay for this celebration myself. And so, folks, I ask you—all of you, all the regular paid-up stockholders in Telair—to come round and be my guests at dinner at the Hotel Orgillon on Thursday night, and we'll have a little jollification meeting."

There was quite a sensation naturally at this; and then, after another vote of thanks proposed by Mr. Cressy, the small stockholders of Telair, in their dull-black wraps, filed up and shook hands with the big stockholder in the seal-lined overcoat, and went out down the wide, dark, dingy stairs, talking louder than ever before.

I went along out with Charlie Seavers and his mother.

"What do you think about it now?" Charlie asked me. "Do we win? Fare thee well! Three years from now we'll all be riding round in big, red buzzwagons—mother here especially."

His mother, the heavy woman in the black straight cape, disregarded him, stepping painfully down the stairs. She looked a good deal less frivolous than Charlie. And then we got on the street car together, a group of us who went the same way. It was middle evening, the time between the going to and coming from the theaters, when the trolley cars usually go droning up the grade, bearing a lounging conductor, drowsing in back, and a passenger or two inside. We had our car practically to ourselves. We were all excited by the news and more than usually talkative, Mr. Cressy leading the conversation.

"It certainly looks good, it certainly does," he said in a round, oratorical voice that filled the car.

"Oh, I hope so," said the little dressmaker excitedly. She was a surprisingly little thing, when you got a look at her, almost a dwarf, with a queer face, puckered and worn by forty years of staring down at a needle.

"We all hope so, Miss Moshier," said Mr. Cressy heartily.

"It's time some of us had some luck," remarked Charlie's mother, who seemed a rather serious person.

The butcher sat by himself in the corner, with his heavy hands in his lap, looking off, without noticing us.

"You're right in that, too, Mrs. Seavers," said Mr. Cressy.

The car droned on as we thought about it.

THE FORTUNE MAKER

III

By WILL PAYNE

ILLUSTRATED BY CLARENCE F. UNDERWOOD

JOLTING along in their local train to St. Louis, John Turner and Walter Hayes speculated somewhat about Smiley Carter and Madeline Jones. But their own prospects were more absorbing. In the excitement of reaching St. Louis they fairly forgot their late companions.

Walter Hayes, who could run a typewriter, write shorthand a little and knew a bit about office work from his experience in the bank at Marthasville, was the first to get a job. There was a lean period of several months—for the country was then in the grip of hard times—when his small salary supported both of them. John was of no use at office work or any routine job, but he presently discovered a decided talent for salesmanship. Newspaper and magazine files contain many sketches of his life. From them one may learn that for some time he was engaged in selling carriages in St. Louis.

But along in the last years of the old century pretty much everybody became aware of a new contrivance—namely, a pleasure vehicle propelled by mechanical power contained within itself. John Turner was fascinated by this new contrivance. He found work of an intermittent and precarious sort for a time, demonstrating and selling it.

With that, we can skip over to the year 1903; the place, Fort Wayne, Indiana. John was employed there selling automobiles, but not very prosperously. He had got Walter Hayes into the establishment of his employer as a bookkeeper and general office man.

Edward P. Underhill was this employer's name. He'd had an agency for the sale of farm implements near Fort Wayne and made some money by it; but, like John, he was fascinated by the new self-propelling vehicle. So now he was running an automobile agency in the city. He was probably forty-five, lank and rather round-shouldered, with a drooping red mustache, and a nose like a large, freckled, bent knuckle—a bone-dry sort of man, excessively earnest, without humor, a fire of endeavor always in his blue eyes.

He had gradually evolved a lecture about his automobiles, beginning with the wheels and proceeding in great detail to the chassis, the engine, transmission, speedometer, body, top, windshield. For proper delivery this lecture required about an hour; and he insisted, as far as possible, upon delivering it properly—gravely pointing and demonstrating with his lank, freckled, big-knuckled hands, leading the prospective purchaser round the car from point to point as he explained in a loud, monotonous voice.

"You and I Ought to Send Him to the Senate. Just Making Automobiles Will Cease to Amuse Him After a While"

If, while he was talking about the carburetor, the listener cut in with a question about upholstery, he would say patiently "I'll be coming to that in a minute," and go on with the carburetor. He was immensely proud of this lecture, considering it the most conclusive and exhaustive presentation of a machine that was to be had anywhere—besides showing that he knew all about the contrivance. His earnest blue eyes would light up with proselyting zeal as he explained some fine technical point.

The lecture was certainly exhaustive. Listener after listener got restless under it; interrupted; insisted on answers to questions that were quite out of order; left in vexation. Sometimes Mr. Underhill himself lost patience at the listener's gross lack of appreciation.

"Of course, if you don't want to know what you are buying ——" he would say reprovingly; or even: "If I'm willing to spend my time explaining this machine you can afford to listen, can't you?"

He considered his intimate acquaintance with the mechanism of an automobile a great asset, and was impatient of the vulgar view that regarded mere sales as the chief point. Thus he was in a state of chronic irritation, which didn't at all help his sales or his relations with manufacturers or the banks. Under these conditions his agency was in an excessively poor way; with more liabilities, in fact, than assets. It handled two makes of cars; but the Crittenden, made in Detroit, was its chief reliance. The Crittenden Company, however, was dissatisfied with the connection and looking for a new one. These untoward conditions might have discouraged a much abler man than Mr. Underhill; but he had more confidence in himself than other people had and a bulldog tenacity that carried him along. He looked upon John and Walter as mere youngsters, reserving whatever confidences he had for Hemphill, the other and older salesman.

"The shebang is busted, Pips; they'll be closing it up one of these days," John observed to his friend; for Walter talked freely enough to him about conditions that his job of bookkeeper made him acquainted with.

This was on Saturday afternoon, and they were sitting alone in the office, which was divided from the salesroom by a partition of stained pine and ground glass.

"Looks like the want-ad column for us again," Walter replied good-naturedly.

"No," said John. "I've been thinking it over. Let's you and I buy the agency."

He was twenty-eight then, stalwart, handsome, dark-eyed, dark-skinned, with a solid jaw and chin. He dressed well, whether he could afford it or not, because, as he explained, he couldn't afford not to. Since the show days he had grown perhaps ten pounds heavier—gradually, just as he had come by the more overweening confidence in himself from having long measured his wits and will against others in selling things. He looked as though he might have a million dollars, and acted that way, throwing out the suggestion about buying the agency quite as though it were a thing anybody should consider seriously.

Walter Hayes stared at him a moment with a slightly incredulous smile; then laughed, asking:

"Where'd we get the money?" as though it were a joke.

Outwardly he had not changed much—eight years older, of course, with the fresh coloring of his cheeks a bit faded and dusted over. He had stopped wearing his reddish hair in a pompadour—now he combed it down sedately, or tried to; but a wisp of it bristled up over his forehead. He was as amiable and loyally attached to John as ever; but he had developed a knack of grinding industry and a sort of conservatism. He carried the whole office work easily and had a couple of hundred dollars in the savings bank, though Underhill paid him only eighteen dollars a week. That and John's wardrobe were about all the tangible results the pair could show for the years since they took the local train for St. Louis.

"Don't need any money," John replied promptly. "It oughtn't to take anything but nerve. I've got plenty of that."

Leaning against the end of the desk with his arms crossed, now and then puffing at a brier pipe and looking down at Walter, who was curled in the big swivel chair, he explained:

"This lobster, Underhill, is all through—except that he don't know it. He ought to be lecturing to farmers' clubs on alfalfa culture instead of trying to sell cars. He's got a note coming due at the bank on the thirteenth. He can't pay it and they've already renewed it for him half a dozen times. The Crittenden people are sore at him. He's broke, and getting worse all the time instead of better. If we go at him right we can shake him up and get him to sell out to us. That means we'll assume his debts."

"But where'd we get the money to run the agency with if he did turn it over to us?" Walter insisted, showing his white teeth in a laugh, for John's nerve amused him. "We've got to pay for the cars when they're shipped to us, you know; then we don't get any money until we sell 'em. Who'd back us?"

John smoked and meditated a moment.

"We'd make the Crittenden people sell us cars on time," he replied confidently. "What they want is to sell cars. Why, if a rooster like Underhill can run this agency a year on wind we can run it a century."

"But Underhill had capital and credit when he began," Walter objected.

"What's credit but just selling something?" John replied. "It's just selling yourself; persuading the man with the goods to invest in you, just as you'd persuade somebody else to invest in a car. If I'm good enough to make a farmer buy a Crittenden car I ought to be good enough to make the Crittenden Company buy you and me. We're a blame sight better buy than their cars are." He thought it over a moment further and announced: "Sure! We can put it across! We'll take a hack at it, anyway."

So it was decided. They talked it over and determined to await a favorable opportunity for approaching Mr. Underhill.

"Why, it's a good-enough gamble for us any way you put it," John observed. "We don't stand to lose anything except our jobs; and when Underhill blows up we'll lose them anyway." He could be completely plausible about propositions that might sound completely ridiculous to another.

The opportunity came two or three days later, when there was nobody but Mr. Underhill and Walter in the office. In the morning's mail Walter had noticed an envelope with the return card of the bank in the corner and had peeked sufficiently to feel sure the envelope contained a notice on a printed form about the note that fell due on the thirteenth. Mr. Underhill sat at the desk with his round shoulders humped over, looking down very gravely at the notice and thoughtfully pulling at his long red mustache. Walter slipped out to John in the otherwise empty salesroom and said under his breath: "He's got the notice to pay up on the thirteenth. Might as well hit him now."

John glanced about the salesroom, but Hemphill, the older salesman, was out and the coast was clear; so he nodded assent and led the way back into the office, Walter following.

"We'd like to buy this agency from you, Mr. Underhill," he said at once, standing at the end of the desk and smiling.

He liked to stand and look down at a man. Walter, also smiling, hung a little in the background and nervously stuck his hands in his pockets.

Astonished, Mr. Underhill merely gaped up at the speaker with his earnest, rather boiled-looking, prominent blue eyes.

"Of course it's practically gone up, anyway," John went on in a soothing tone, a good deal like a surgeon proposing a major operation. "It can't last long as it is, you know."

"What the devil do you know about my affairs?" Mr. Underhill blurted out afflictedly.

"Well, you know what the debts are and how much there is to pay them with," John replied with the most amiably reasonable air. "For one thing, there's that note at the bank."

"My bookkeeper has been blabbing to you!" Mr. Underhill cried, turning a red and accusing face to Walter.

"Well, of course, Mr. Underhill, we're both working for you and are interested to see how the business is going," Walter explained amiably. "Naturally we've talked about the business, because it's on our minds."

"My knowing about a note that is coming due wouldn't make any difference, Mr. Underhill. It would come due just the same," John put in propitiatingly. "You see, if you come right down to brass tacks, your liabilities are more than your assets. Of course it's the figures that count—not what I know about them."

"My books don't show it," the proprietor retorted with an unhappy feeling of the ground's slipping under his feet.

"Of course that old paper you took over from the implement business really isn't any good," Walter observed, still smiling.

"You know the Crittenden people are looking round for another connection," John reminded him. "If they take their cars away there won't be anything at all left but just a hole. You see, Mr. Underhill, selling cars isn't really your line. You know too much about them. You ought to be making them. If the bank knew the Crittenden people were looking for another connection, or the Crittenden people knew how you stood at the bank—you see, just a touch anywhere would blow the whole thing up. It's sure to blow up soon, anyway, leaving you 'way in the hole. By selling out to us now you could get out with a clean slate."

"How much capital you got to buy with?" Mr. Underhill demanded.

"Oh, if we had capital we wouldn't buy this agency, Mr. Underhill!" John replied. "We'd start a new one. You couldn't sell to anybody with capital, because nobody who had capital would throw it into a hole. If I had capital I'd go get the Crittenden cars to-morrow on my own hook. We're willing to assume the liabilities exactly because we haven't any capital, and without capital that's the only way we can get a look-in at the game."

"The Crittenden Company won't sell you cars," Mr. Underhill declared.

"Sure they will!" John replied with a confidence he didn't quite feel. "You see, we'll have the agency then. I can show 'em that we're going to sell their cars. That's what they want—to get the cars sold. They'll take a chance."

Well, they hammered away at him, saving his feelings as much as possible—jollying him while they kept the anvil hot. Finally he agreed to let them have the agency if they would assume the liabilities and get the Crittenden line of cars.

Then John went up to see the Crittenden people—to be rebuffed at first. But, as he told Walter, he hung on like a dog at a gopher's hole, haunting their doorstep and fairly sleeping with them, until finally his salesmanship won. The company had a rule against selling cars to an agency on credit and they wouldn't break the rule; but they slipped round it by indorsing the new agency's note.

So the modest sign, E. P. Underhill, came down, and a gorgeous blue-and-gold one, John Turner & Company, went up in its place. For a time the new concern ran exclusively on its nerve and powers of persuasion; but, as John calculated, what the Crittenden Company wanted was somebody who could sell its cars. When Turner & Company demonstrated their ability to do that the manufacturers became very friendly to them.

Meanwhile Walter Hayes had plenty to do. He was only a dub salesman, as the senior partner frankly told him; but his working hours became anywhere from twelve to fourteen a day. He ran the office end, dealt with the newspapers for advertising and with the banks. He was liked and trusted. The banks particularly quite took to him—with his precision, accuracy, punctuality, and his quick understanding of the elements of credit. He had the business sense and was always smiling; always obliging when he had a chance to be.

Within a year the new agency was out of debt; but it wasn't possible to keep out of debt. John Turner was irrepressibly expansive; never quite round one sharp corner before he was rushing at another; always wanting more advertising, bigger electric signs, spending money freely among possible customers. Often Walter objected that they didn't have the money.

"All the more reason we ought to hop in and get it," John replied; "the more bait, the more fish."

He defended his lavishness as sound business policy, which in the long run it was; yet, having the means, he would have done it anyway. It was his nature to operate on a broad scale. It wasn't very long before about everybody in that region knew John Turner was selling automobiles.

Besides the Crittenden line of cars, Underhill had another line—the Luxfer. This was a high-priced car that hadn't caught on very much and John Turner was indifferent about it. The company made conservative objections to keeping on with the moneyless new agency and John let them go.

But along toward the end of the first year they took another car—the Sarum—which was then not much over a year old. It was made by the Sarum Wagon Company, an old and very respectable concern that had got a strain of new blood and decided to branch out into the expanding department of the vehicular field. The old company spent a lot of money launching its automobiles, but the car wasn't very successful. There were faults in the engine that let distributors in for a good deal of complaint and trouble generally.

Sarum was then a good, solid, conservative sort of town, of about fifty thousand inhabitants, with half a dozen quite well-established manufacturing concerns that nobody in particular outside their own lines of trade knew anything about. The wagon company was the biggest of them. It was only a night's ride from Fort Wayne; and in the course of the agency's second year John Turner ran up there a good many times, talking to them about the trouble in their engine, and so on. By that time John wouldn't be round anywhere very much without making acquaintances

He Would Exactly as Lief Call the Boss a Blockhead as Anybody Else

and finding out about how things were. He had reached a stage where he impressed himself on those with whom he came in contact.

The real head of the Sarum Wagon Company was Judson Weatherly, who had married the daughter of one of the old stockholders and gradually, in effect, absorbed the management. He was about forty-five then, a wiry, restless, undersized man, always carelessly dressed, with a bushy brown mustache and big, round, gold-bowed spectacles. He was always in action, never still, giving an effect of bursting energy. He was selling cars at a great rate, dealing in figures larger than the town had ever known, building a big addition to the wagon factory; and Sarum was talking of him with bated breath as a business genius.

Before anybody woke up to the situation he had reduced the respectable old wagon company to a mere tangled wreck. He had sold plenty of cars, but accurate accounting showed they cost the company more than they sold for. He had appointed irresponsible agents, taken their notes for cars that had not been shipped, and discounted the notes at the banks. He had issued notes of the company and falsified the books to conceal that fact. What he had done to the fine old wagon company, in short, was about what a curious youngster of three years might do to a clock if left in undisturbed possession of it long enough.

The appointment of a receiver for the wagon company was quite an earthquake for Sarum. The eight banks were loaded up with extremely doubtful paper and the whole business community sat goggle-eyed and aghast. The receiver proposed to cut off the unprofitable automobile business at once and save what he could out of the wreckage.

In short, it was the Underhill situation over again—only on a far bigger scale and in a much worse snarl; and in all the welter Judson Weatherly was bobbing round, with the same fatuous energy as of old, dabbing at his bushy mustache and peering through his gold-bowed spectacles as though he was running over with vastly important affairs.

"He's just a farmer," said John Turner boldly, meaning it as a term of contempt. "He's set on a wire spring, like a jack-in-the-box. Because he's always bobbing and wiggling, people thought he was doing something important. The trouble with him is, somebody lent him a dime-novel magazine story about how the big fellows in Wall Street put it over everybody. He thought he was acting like them."

John made this contemptuous statement at a meeting in the directors' room of the First National Bank. There was Frank Detweiler, president of the First National, sitting at the end of the table, with one lean leg hooked over the arm of his chair as he listened to John. He looked all a shock of iron-gray hair, with a grizzled mustache and eyeglasses. He kept turning a pencil round in his fingers and sticking the end of it through his mustache as though it was a sort of comb. His bank was in for a hundred and forty thousand dollars of Weatherly's paper of different kinds.

Then there was William Bush, of the Sarum State Bank—a short, dumpy man with a red, wrinkled, leathery, fierce-looking face, set off with a strong hooked nose. He sat bolt upright and glared in unspeakable indignation at everything in general.

Next him was Lyman George, of the Merchants' National Bank, who wore a neatly trimmed and pointed brown beard, and had fine, curly brown hair, parted in the middle; but the hair was a wig. He nodded sagely from time to time and stroked his beard, but hardly spoke; in fact, during the whole day and a half since the failure he had been scared so stiff he could hardly speak. His bank was in for ninety thousand dollars and he had a disagreeable suspicion that the directors were going to discharge him, for he owned only a small amount of the bank's stock.

Then there was Isaac Baum, of the Citizens' Bank, who was fat and bald, and wore a thick red beard. He had a wide mouth, and grinned at the others from time to time rather as though he expected somebody to announce that the whole thing was only a poor practical joke.

There was Macdonald, of the Manufacturers' Bank, a big, flat-chested, hollow-eyed old Scotchman, who didn't want to talk or think of anything but the quickest way to get Weatherly into the penitentiary. Now and then he interrupted the talk to tell some other instance of Weatherly's having lied to him, his voice rising, thumping the table with his fist.

There was Peter Tree, of the Savings Bank, a benevolent-looking old gentleman with a handful of white chin whiskers and kind blue eyes. Whenever some fresh instance of Weatherly's financiering was touched upon, he repeated that he couldn't understand how Weatherly could have done it—remarking two or three times over that he'd known him from a boy, and looking round the table with a slight, amazed smile.

There was Wollenstein, a notebroker from Chicago, who had sold a lot of Weatherly paper to banks over the country. He spoke with a slight lisp, but always

to the point, and smiled a crooked smile with one side of his mouth only. This catastrophe was more a thing in the course of the day's work to him than it was to the others. Altogether, the men in the room represented nearly a million and a half dollars of debts of the Sarum Wagon Company. Whether the real assets would amount to half that was a question.

John Turner was there on his nerve, taking Walter Hayes with him. He had been in Sarum and knew the failure was going to happen the day before it was announced. Since knowing it he'd hardly had his clothes off. He proposed to get the automobile end of the business and carry it on. There were the creditors, all at sea and aghast over the prospect of a big loss—as to which bank directors and stockholders were sure to ask many unpleasant questions. The whole town was stirred up and the bankers were nervous lest depositors should start runs on their institutions.

John could talk automobile by that time and he did talk it. He went all over the Sarum concern's business; showed how Weatherly had lost the money; insisted that it could all be got back again and nobody need lose a dollar if only the automobile part of the business was run properly. The name was pretty well advertised; there was an established selling organization. Make the cars right, and loss would turn to profit.

Of course that was a big temptation to men who, if the automobile business was closed up, would certainly have to pocket a big loss. John saw that Detweiler and Wollenstein were the ablest men in the lot, and he stuck to them like a burr. Without having John's magnetic salesmanship, Walter Hayes could talk plausibly about the financial details. As usual, he was liked and trusted.

Ten men in the room—creditors and representatives of creditors—were upset by the failure; their nerves were shaken, their minds uncertain, not knowing what to do; some of them half bewildered—all afraid to face a big loss. And there was handsome John, in magnificent form, talking to them with absolute confidence—never the slightest doubt or hesitation—asserting positively that they needn't lose a dollar, but, on the contrary, might make a profit. Chance had given him a great opportunity and he rose to it. When it came to the automobile business he reeled off figures and made predictions that caused the audience to gasp; but always with that absolute assurance.

Well, the great bluff went through. The Sarum Motor Company was organized to carry on the automobile business. After allowing what the wagon end of the old concern might be worth, the creditors took preferred stock in the new company for their claims. Finally all of them, except Lyman George and Andrew Macdonald, subscribed something to the new issue of a hundred and fifty thousand dollars of preferred stock, which was to give the company its working capital.

John Turner and Walter Hayes went back to Fort Wayne, where a couple of bankers and three or four other men with money had a good opinion of them, and got some additional subscriptions to this hundred and fifty thousand of preferred stock; so virtually the whole amount was taken.

The day before the failure John Turner & Company, of Fort Wayne, might perhaps have been able to scrape together twenty thousand dollars from their automobile agency. Now they were in control of an automobile manufacturing concern that made quite a showing—if one didn't look behind the curtain. The common stock in the new company represented nothing but prospects. John took forty-five per cent of it, Walter twelve per cent, and the remaining forty-three per cent was given as a bonus to those who took the preferred stock.

If one were to retain an impressive idea of the new concern he must not look behind the curtain. There was an unfinished plant; an unsatisfactory car; a business that had got a big black eye from the failure; a lot of agents, many of whom were quite disgusted; and a hundred and fifty thousand dollars in the bank.

John Turner and Walter Hayes knew enough about the automobile business even then to know that a hundred and fifty thousand dollars wouldn't carry them very far in the way they meant to go. Completing the plant would take the better part of that, and John wanted two hundred thousand dollars the first year just for advertising.

This is not a narrative of the Sarum Motor Company, but of John Turner. The shifts they made those first two years, the impossible corners they actually turned, the times when the whole venture hung on a hair—hanging on a hair being, in fact, its chronic state—need no detailed recital. Before the second year was out the banks were worse loaded up with the new concern's paper than ever they had been with the old—so loaded up that they fairly had to stand by it.

In dire junctures there were such expedients as shipping out carloads of unfinished motors and getting credit at the bank on the bills of lading; then running the cars back to the shop to be completed. Walter Hayes developed a resourcefulness in the matter of kiting checks that rather astonished him. All these things John himself related later and laughed over.

Arthur McGregor—known to everybody as Sandy—had been put in as superintendent of the factory some months before Weatherly blew up, though fatuous Weatherly would never let him have his way, preferring the highly theoretical Frenchman who had devised the bad engine.

Sandy was a rolypoly, bewhiskered, bespectacled person who looked comically like the caricatures of a German professor. He dressed carelessly and spoke with a burry accent. He not so much walked through the plant as plowed through it, always with his fists doubled and swinging at his sides in short, jerky little motions, as though he was pumping himself up. His whiskers fairly bristled with energy and his peering eyes behind the spectacles saw everything. If anything didn't please him he spoke burrs and nettles; but he would exactly as lief call the boss a blockhead as anybody else—which was another reason why Weatherly had ignored his advice.

He and John had struck up an acquaintance before the smash and talked engine exhaustively. As soon as the new concern came in Sandy was made a vice president and general superintendent, and given a handful of the new common stock. He couldn't talk so beautifully about his engine as the Frenchman could, but the engine worked far better.

In those two years John Turner, Walter Hayes and Sandy McGregor ate and slept when there was nothing else to do. The financing and accounting were as strenuous as anything else about the place. Night after night Walter Hayes dozed in the car that took him away from the plant at any time up to midnight and laid the foundations of the gray patches on his temples.

But it went. When two years were up wise people began more or less to drop the habit of talking about the Sarum Motor Company as a mere temporary phenomenon, founded on a shoestring and foredoomed to early disappearance. There were some debts still; but real money was pouring into the banks through the pass books of the Sarum Motor Company at a rate that was commented on in bank parlors in awed tones. Bank presidents were ceasing to shudder when they saw Walter Hayes smiling at them from the threshold of their private offices, indeed they were beginning to smile back in warm expansiveness.

It was just at the end of the second year that John Turner, instead of rushing down to the First National to see President Detweiler, had his secretary telephone that gentleman an invitation to come out to the plant at half past two, because there was a matter of importance to be discussed, and Mr. Turner couldn't well get away. Sagacious Frank Detweiler went to the plant, realizing as he did so that John Turner had arrived.

Two or three days after that Walter Hayes accompanied Sandy McGregor through the shops; for he, too, liked to keep in touch with the manufacturing department. They presently entered a shop that had been fixed up for temporary use—one of those makeshifts that were always happening as the business outgrew its housings and spread over the neighborhood like a cucumber vine on too small a trellis.

This shop had windows in one end only, insufficient for lighting it; so it was artificially lighted from long glass tubes of gas on the ceiling—the sort often used in composing rooms, giving a strong but ghastly light with a greenish tinge. The shop was filled with massive lathes for cutting and grinding crankshafts. A workman took a step to pick up a rough shape of forged steel from the heap beside his lathe, and Walter happened to notice that he limped, as though one leg was stiff.

Walter loitered a moment, for he liked to see the cascade of fire as the steel met the swiftly turning wheel. The workman started his lathe. Then, aware of someone standing near, he glanced up, lifting a thin pale face that looked corpselike in the grewsome light.

It was Smiley Carter. Recognition came to Walter—not in a flash, but with a kind of swift dawning. For a moment the two men stared at each other, with mutual recognition. Then Smiley bent his face over his work again.

Walter was amazed. In the pale, lame workman he felt indefinitely a poignant tragedy. Yet he walked on without speaking. It would be difficult to say just why. Of course in twelve busy years Smiley had drifted far into the background of his consciousness. Perhaps he hadn't once thought of the man for five years. That show business had become vastly remote. Then, he was taken wholly by surprise and there was a certain reticence—an instinctive shrinking back from a painful contact; and this was not

He Took the Country Club in Hand, Contributing Nearly All the Money for the Spacious New Building

IBERIA

By HOLWORTHY HALL

ILLUSTRATED BY W. B. KING

TO BE sure, the Gaul has said in his wisdom: "When in doubt, search for the woman." In the depths of his soul and the depths of his literature he has searched for her, and discovered her; and, all things considered, the result has proved a very bad thing for the Gaul. Unfortunately it has also established the woman in the light of the great universal alibi—where she belongs.

To blame Miss Helen Merrihew with nicety of judgment, consider first her birthright and her patronymic. She had a broker for a father, a college president for an uncle, an ambassador and a governor for grandfathers, a dozen minor celebrities for cousins-german. She herself had known newspaper blarney as early as that glorious day when skirts were lowered in maiden dignity to her shoe tops, and now that fashion had sent them back again still faster than they came, her photograph adorned the Sunday supplements six times a year, which indicated that she was socially prominent without being vulgarly rich.

So that quite rationally Miss Merrihew expected that her suitors, like her distinguished kin, would be successful to the point of public recognition and acclaim. She tended to discourage those who hadn't some one quality of greatness, and so far she had got away with it with perfect accuracy. But there came a night when she committed the grievous error of looking under her lashes at Ernest Benham after his voice had begun to falter. She completely lost her head in the moonlight, and when she found it again it was resting comfortably against the shoulder of Ernest Benham, who was the son of nobody, the heir to nothing, and had a none-too-easy job in a national bank.

"You'd Rather Have These—These Comparatively Trivial Things Than Have a Chance of Really Big Accomplishments?"

In the morning, after she had blushed at herself in several mirrors and reflected upon her duty to posterity, she sent for Benham; and when he duly arrived in season for tea, she proceeded to advise him solely for his ultimate good. She really wasn't more than two-thirds in love with him, and she honestly thought him to be at best a lovable sort of slacker; so that her ultimatum was kindly, but easy to understand. In effect she told Benham to go and get a reputation.

He took it with characteristic calm, but his smile was grewsome.

"In other words," he said, speaking thickly, "you weren't sincere! You didn't feel it as I did! You thought I was only spooning! It was just—casual to you! Oh—Helen!"

Miss Merrihew was suitably affronted and distressed, but she curbed her sympathies and her resentment and followed the tradition of centuries by displaying that motherliness which at once serves as attack, defense and strict neutrality.

"No—no!" she said with the utmost gentleness. "That isn't it at all. But we're so terribly young, Ernest, and we simply can't afford to make any mistakes, can we? We can't do anything we'd be sorry for afterward. And—I do care a lot for you, too, only we've got to be sure we'd be happy together, haven't we?"

"Well, I'm sure," insisted Benham doggedly. "I'm sure enough for both of us!"

"But I've just told you, dear—I mean Ernest—that we are young, and you haven't ——"

"The point," said Benham, with unfathomable injury betraying itself in his eyes, "is that you're not certain I'd make you happy. All right! That's easy. What do you want me to do?"

Very explicitly she told him. Incoherently and illogically, but with shattering clarity of purpose, she conveyed her meaning. She was accustomed to temper her affections with honor and admiration, and to behold her convictions upheld by the world at large. She wasn't averse to marrying a poor man, if he were famous or en route to fame; and she wouldn't marry an obscure man anyway. She required triumphant success, or the promise of it; glory, or the assurance of it; she was the last of an uncommon family, and she could ally herself with none but an uncommon man. This opinion, she said in closing, was shared in its entirety by the arbiter of her domestic destiny, her father. In fact they had collaborated on it. It was practically immaterial to them what the candidate's field of endeavor might be; he must show the fundamentals of superiority in that field. And Benham, she said, was indolent and lacking in ambition. There was even some doubt as to his ability to support her. They wanted him to dismiss, for a time, any hope of matrimony and to earn his right to sue.

Benham laughed spasmodically and met her eyes.

"That's fair enough," he conceded. "Well—I'm not scared. I'll satisfy you and your father or break my neck trying! You've been awfully frank, Helen. I'm glad of that. It hurts, but I'm glad. You see I'm not so very conceited. I don't ever expect to be good for much front-page news. I'm not cut out for a genius, either. So my only chance seems to be pretty evident, doesn't it? What's the figure Mr.—your father sets?"

Miss Merrihew colored, but since she had laid herself open to the *riposte*, she conquered her emotions and quoted six figures.

"And that's final?"

"I'm afraid it's final, Ernest."

Benham stood up, approached her and bent low.

"Then," he said, quivering, "I won't make it any harder for us! I won't bother you again until I've done something! And the next time I come to you ——"

As she sat there, crushed and stunned, listening to his footfalls in the hallway, Miss Merrihew was subtly aware that neither the haughtiest plutocrat in the social register nor the wisest savant in the world could have kissed her more alarmingly or more superbly. It was at that moment, too, that she first became curious to know whether her father, whose dogmatism was notable, had ever been seriously in love.

Now in the biography of every normal young man whose ancestors have neglected to accumulate a fortune there must be inserted sooner or later a frenzied chapter, in which he realizes that nothing else can remotely approach the importance of growing rich overnight. And even although such chapters, at least in the temperate zones, are generally descriptive of the months of May and June and have their origin most frequently in the solitude which follows a rendezvous by moonlight, they are not by any means peculiar to lovers. All young men have their periods of golden yearning. Nevertheless, it was Miss Merrihew who egged Benham on to folly, and on these grounds she must stand indicted.

For it so happened that Benham, during the eight long years since he had left his native village in Ohio and sought his fortune in Manhattan, had privately cherished a dream of plutocratic splendor to be thrust upon him. He had scanned with envy those tabular statistics which show that for every dollar invested in some industrial security in 1885, the lucky speculator has received four thousand dollars net to date. He knew, as every man knows, of investors—no less clever than himself—who had bought Beth Steel at 60. He knew of wily fellows who had swept the boards with General Motors. From time to time he had resolved that at the nearest opportunity he, too, would venture down among the kings of finance, to become that one exception out of every hundred neophytes and win his fortune in a rising market. But thus far he had never risked a penny in the Street, and he might never have soiled his record if it hadn't been for Miss Merrihew's strange standards. She was innocent but responsible. She touched the spark of her desires to the dynamite which was Benham's hidden nature, and his common sense exploded in a jiffy.

As a bulwark between Benham and starvation, there was a fund of six or seven thousand dollars, and six or seven thousand dollars was ninety-three or ninety-four thousand too little. Furthermore, as far as Helen Merrihew was concerned, there was no great utility in any assets less than the stated minimum of one slim figure and five plump ones.

What analysis could be simpler? Benham drew a single check and was committed to that popular indoor sport which demonstrates, anew each week day, the charming optimism and inefficiency of a gentleman named Hoyle. And it was hardly the lunch hour before Benham had made a thousand dollars, and he added five hundred more by two o'clock.

"Well!" said Benham joyously to himself. "What makes me sore is why I didn't get into this game earlier!" He forthwith ordered violets for the lady of his alibi and gloated inconceivably.

In subsequent sessions he took a five-point profit in the rails and six in coppers. A mere acquaintance volunteered a red-hot tip on Zinc, and Zinc obligingly responded by giving an imitation of an express elevator going up. Benham had eighteen thousand to his credit and began to entertain contempt for cold-blooded silurians who purchased bonds. He participated in the spectacular drive on Alcohol and had the incredible good fortune to sell short at the week's high and to cover at the week's low. Rothschild and Jay Gould and Russell Sage all say it can't be done, but Benham did it aptly and nonchalantly. In six weeks he was master of sixty thousand dollars, and he sent two eagles' worth of roses to Helen Merrihew. At this delightful juncture the gods of hazard perceived him from on high and noted his budding arrogance, and one said sternly to the other:

"This Benham boy seems to think he's got our number. Let's show him up. Kick him, one of you fellows!"

Whereupon Benham bought the rails again and won, and was smiling beatifically when the cashier of his bank summoned him for an interview. There were no preliminaries, formal or informal.

"Sit down, Ernest," invited the officer. "I'm afraid we're going to have a quarrel. I hear you've been speculating. How about it?"

"Why not?" Benham was ingenuously proud of himself.

"Well, we're naturally inquisitive to know why you didn't file your declaration."

"What declaration?"

The cashier frowned a little.

"You're not trying to dodge, are you?"

"Not exactly. If I am, I don't know what I'm dodging. I simply don't know what you're talking about."

"Is that the truth?"

"What!" said Benham, starting.

"Do you mean to say that when you opened your account you weren't given a blank to sign—a blank that stipulated that if you were connected with any bank or had access to any trust funds, you had the permission ——"

"I certainly did not," said Benham flatly.

"I—that's so remarkable, Ernest, that—— However, we'll drop it for the time being. Here's the situation: you're cutting such a swath that we heard about it indirectly, and that means you've been making the fur fly. It can't go on. Your intelligence ought to tell you why it can't. You're a very young man, you're in a confidential relationship toward us and ——"

"It can't go on?" Benham was incredulous.

"Not possibly. We can't allow it. We've found out by experience that it isn't safe for us, and it isn't safe for our youngsters, to have 'em ——"

"But if I want to go on?"

The cashier's gesture was dramatically adequate.

"It's impossible! You can't stay in this bank and operate on the Street. That's flat."

"In that case," said Benham politely, "when would it be most convenient for you to have my resignation go into effect—Saturday?"

"Ernest! Don't be a fool!"

"Fool!" retorted Benham. "At thirty-five hundred a year? Why, I'm two decades ahead of you now!"

"But listen! Your prospects ——"

"Now if there's to be any quarrel," said Benham with all deference, "you'll have to stage it. It's a matter of plain business to me. And if you're as positive as I am—if you're as stubborn as I am, we'll say—I don't see but what we'll just have to part company. I'm sorry—I liked it here. But money's money."

"Hold your horses for a second!" persisted the cashier seductively. "Now at Christmas we'll very likely distribute a fifty-per-cent bonus, Ernest. And you may be elected assistant in another season, too. You know that—it's what you've been working for. Well, it's in sight. Don't you go off halfcocked. I know you've been lucky, but it won't last—it never does. You save what you've made, put it in mortgage bonds and stay here. Think it over at any rate!"

"Inside of a week," prophesied Benham, "Anaconda'll go to par. I'm buying a thousand to-night. You can figure out for yourself what my salary'll look like alongside of a four-point rise. Or that bonus compared to six points."

The cashier inclined forward and loaded his voice with all the impressiveness it could carry.

"Ernest," he said. "I'm not trying to bulldoze you. This isn't any bluff—it's straight talk. I was instructed to notify you and I'm doing it. Don't you be an idiot! Stay out of the market and do your work decently, and you'll be a big man in the banking world some day! And don't make any snap decisions. Because I tell you absolutely that if, after I've given you this notice, you don't see fit to take it, you're out of banking for good. You can't stay here, and no other reputable bank would take you without our recommendation. So ——"

"To save arguing about it," said Benham, "we'll date my resignation to-day. You needn't pay me any more salary, but I'll come in as long as I can help the next man to grasp my job. You've been mighty nice about it, but if I've got to choose between this place and my future, I'll have to say good-by."

"Ernest," said the cashier soberly. "I'm sorry. We like you and we want to keep you. I want you. We've got along without friction, and you have the making of an executive some day. Think just once more! You take, say, a week!"

"No, I don't believe I'm open to argument."

The older man sighed in pity and shook his head.

"Well, there's no alternative then."

"None at all!"

"And I suppose I'll have to accept your resignation, if you'll be kind enough to have it typed."

"Thank you for being so white about it," said Benham, rising. "And if you'll let me know who's going to succeed me, I'll be glad to coach him." He went out buoyantly; half an hour afterward he had bought Anaconda at 95, and everyone from the check desk to the president's sanctum knew that he was gone to uphold his independence and to display the courage of his information.

What he had long contemplated was no more visionary than, under the circumstances, it was logical. A month ago he had realized that he might do worse than to seek an alliance with some conservative brokerage house and to pursue the career for which he was temperamentally fitted. He would push his capital up to the sum at which Miss Merrihew's hauteur could be underwritten; he would become a specialist in seasoned securities; he would cease to gamble and take instead his profits in commissions. The attitude of the cashier, then, was a source of relief to Benham; it gave him freedom and saved unpleasantness. It was distinctly better for him to free-lance for a while, and after that he could attach himself where he would. Anybody of prudence would be glad to get him.

With the same pen he signed his resignation and ordered his florist to deliver daily a dozen Beauties to Miss Merrihew until otherwise advised.

Then Anaconda slipped to 89, and Benham took his loss with equanimity in order to flirt with sudden death, as exemplified by the common shares of United States Steel. Following that, he lost appreciably in one or two of the more mercurial war brides, learned to avoid wheat, cotton and linseed oil, failed to diagnose the fluctuations of Reichsmarks, and while he was unswervingly persuaded that another movement would reverse the scale and make him Crœsus, he was whirled to the brink of ruin on the tail of a mighty hurricane that one day swept the curb. He was anxious now to associate himself with any institution which would pay him thirty-five hundred a year, or even less, but to his horror he discovered that his friend the cashier had been fatally correct. He began to hunt systematically for a berth, but money had tightened, and nobody wanted him at a living wage.

Desperately he turned again to fight the market, but he was fighting against the sheer economics of the world, and he lost consistently. His last thousand dollars splintered into fragments; and he became a nervous hanger-on in board rooms, eager for his eighths. Then he bought odd lots, fewer and fewer, and became a detriment to the atmosphere of prosperity. Three months after he had quitted the bank his brokers hinted that, much to their regret, his account was technically undesirable. A fortnight later he was bluntly requested not to haunt the premises of a reputable dealer in outside stocks. He had ceased to be careful of his appearance, and he discouraged other customers. With his last fifty dollars in his pocket and the certainty of success still flickering in his heart, he asked Jimmy Rafferty, who kept a cigar store near Exchange Place, for the address of a bucketshop he had heard about—Skeel's bucketshop—and Rafferty reluctantly told him.

And it wasn't until then that Benham countermanded the order to the florist. He had to.

Mr. Skeel flourished—which is to say he acquired profit without yet having been arrested—in a grim suite of offices in a dingy court, in the gloomiest of all the sun-fearing streets below the dead line. To reach these offices, if you set out from Rafferty's cigar store, you plunged first into a dismal alleyway moldy with dead men's hopes. You swung south, then west and south again, sacrificing something of your pride at every turn, and came eventually to a pair of ornamental iron gates which had deserved their share of architectural magniloquence at about the time that the electric telegraph was a national novelty.

Passing through these gates, you trod on yielding flags, cracked and uneven; you faced a decaying bulk of dirt-gray stone, with warped iron staircases clinging to its sides, not as escapes in case of fire, but as the only means of access to the upper floors.

Her Ultimatum Was Kindly, But Easy to Understand. She Told Benham to Go and Get a Reputation

You avoided the ruins of a central fountain and took to the dark embrasure which was the main entrance to the court. You strode along a dim and lofty corridor, walled with marble of a suggestively greenish tint and smelling faintly of dry-rot, and paused at the farthest door—William W. Skeel and Company, Stocks and Bonds.

At this point, unless your sense of shame was quite burnt out of you, you pulled your hat over your eyes. And then, no matter how abruptly or how silently you crossed the threshold, you found Skeel looking at you.

It was unbelievably quiet in Skeel's, primarily because his customers, for the major part, had long since lost their spontaneity. They were the victims of a devastating fever; they were immune to passions. And even those who came by preference to Skeel's were quiet there, presumably because repression was their policy of insurance. The ticker droned in the corner, the board boys chalked quotations as they came, and Skeel himself, sitting complacently aloof behind his fumed-oak desk, smiled tacit encouragement to his broken clientèle and checked again the paltry margins they had given him. He glanced up as Benham entered.

"Well?" said Mr. Skeel, noncommittal as always.

"Is this the proprietor?" asked Benham under his breath.

"Yes. Anything I can do for you?"

"Why—yes, possibly."

"Look here, brother," said Skeel, eying him, "who sent you here?"

Benham flinched at the familiarity.

"Why, nobody in particular—I heard about you somewhere ——"

"Uh-huh. I get you. Now, where've you been trading?"

"I—what difference does that make?" Benham's very jaws were red.

"Take your time, brother. I don't take new accounts unless they've got some references—no broker does. Where'd you come from?"

"Why—as a matter of fact—Jimmy Rafferty sent me."

"Oh! Know Jim, do you?"

"I've bought a lot of cigars from him."

"That's it!" Mr. Skeel nodded approval. "This your first offense or ——"

"No." Benham laughed shortly. "Rafferty told me you didn't insist on wide margins."

"Oh! Got into you, did they?"

"In a way, yes."

"So. Well—what's on your mind?"

"Nickel."

"Um-hum. Long or short?"

"Long."

"How much?"

"That depends."

"Of course. But how much money?"

"Say—fifty," offered Benham.

Mr. Skeel grimaced and spoke almost without moving his lips.

"Twenty-five shares, brother?"

Benham gasped.

"You'll take two points!"

"For you, yes. You're a friend of Jim Rafferty's. At the market?"

"Why—I think so. The bull movement's about due, don't you think?"

"Right. Cash, please!" He accepted the bills and stuffed them into his pocket. "Oh, Sam, twenty-five Nickel at the market!"

"Twenty-five Nickel!" echoed a worried-looking order clerk far in the murky background of the cage. "Twenty-five Nickel at the market!"

Benham coughed in deprecation.

"Pardon me—I'm not used to—but how does this work? If you actually buy and sell on margins like that ——"

"Lay off that stuff!" Mr. Skeel was peremptory and belligerent. "Don't you get yourself in dutch, brother—take it from me! I want to tell you we do buy and sell."

That, of course, was a downright lie.

"I want to tell you I was a partner in a wire house for ten years." That was a verity. "You ask Jim Rafferty whether this is on the level or not!"

"Nickel—twenty-five at forty-seven and a quarter!" shouted the clerk from the recesses of the cage.

Benham nodded and swallowed hard. The room, unclean and unwholesome, disgusted him; the customers filled him with nausea. Mainly they were the offscourings of the street, the diseased and maimed of the financial district; here and there was a well-dressed, rat-eyed suspect. Benham gagged at the sight of them, and yet ——

"Well, I'm here—I might as well sit down," he said to Skeel, attempting to appear jocose.

The proprietor, displaying scant interest, waved him to a seat. The ticker droned, a flashily clad tout read the tape huskily, the board boy chalked away without cessation:

"Erie a half . . . five-eighths. . . . Steel six . . . eight hundred at an eighth . . . a thousand at a quarter . . . an eighth . . . a half for the Boat, a quarter for the Ship. . . . Annie three-quarters. . . . Steel a quarter. . . . Wax seven-eighths. . . . Mex Pete par and a half. . . . Nickel forty-six and a half."

PHILADELPHIA, MARCH 31, 1917

President and Congress

THE handful of senators who wrecked the whole legislative program at the close of the Sixty-fourth Congress, with the country in the shadow of war, should never again be vested with public power, because in a crisis they cannot be trusted to subordinate themselves to the overwhelming majority of both houses and the exigent needs of the nation.

No question of keeping the country out of war was before them. Anybody but a hopeless blockhead, no matter whether his tendencies were pacific or militant, could then see that whether the country got into war depended upon events and forces far beyond the control of the Senate. The question before them was whether the nation, exposed to an imminent risk of war, should stand in a ridiculous and humiliating position—one hand temporarily bound down with senatorial red tape and a band of senatorial obstructionists sitting on its head. They answered that question in the affirmative.

For years the executive branch of the Federal Government has been gaining upon the legislative in actual power, and Congress has echoed with complaints of that fact. The scene at the close of the Sixty-fourth Congress points to the reason. The President, by and large, is a far more trustworthy representative of the nation than Congress is, partly because the latter is always more or less at the mercy of factious minorities and petty politicians working for selfish ends.

From the beginning of the submarine controversy President Wilson faithfully represented the nation. It said so last November. It is saying so now. The nation is behind him, and the means he needs to carry out its purpose will be given to him in spite of temporary, conceited obstruction. One of those means, as he promptly pointed out, is cloture in the Senate.

Irresponsible Egotists

IT TAKES a situation like that of the first four days of March to throw the inherent incompetence of Congress into pitiless relief. The country was at the verge of war, and several measures of the greatest importance awaited action. Any body of men that actually represented the people of the United States, and was inspired by an intelligent sense of responsibility to the nation, would have found some basis upon which individual differences could compromise and the exigent business of the nation be dispatched.

What actually threatened during those four days was a temporary dictatorship by a few irresponsible, factious, lightweight egotists in the Senate. Under the absurd rules of that body it was possible for a handful of members to assert their petulant wills in effective opposition to the will of an overwhelming majority of both Houses, and in defiance of plain national needs and wishes. Two or three men could kill any bill.

That was not a representative system of government. It is not democracy. A flabby-minded household periodically terrorized and bullied by a spoiled child would be a fair analogy.

In fair weather that might answer after a fashion. In this situation it was impossible. Congress had to be a more representative and responsible body, and to that end the Senate adopted cloture during the early days of its special session. The exhibition during the closing days of the Sixty-fourth Congress showed indubitably that, with the United States at war, cloture in the Senate was among the first necessities of national defense.

The fairly dictatorial power over legislation that every senator formerly possessed in a crisis could not be trusted to ninety-odd individuals, some of whom would undoubtedly abuse it.

Fighting the Submarine

AT THE beginning of February, England had been under a war régime for thirty months; and for at least two years law and public opinion had been operating vigorously to induce thrift. Taxes had been increased a hundred and fifty per cent, which in itself was no negligible inducement to thrift. Importation of many luxuries had been forbidden. The liquor traffic had been very drastically curtailed. The government had taken extensive control of food supplies to prevent waste. It seemed that England was living about as economically as it could. The fact that it had five billion dollars to invest in a new war loan pointed decidedly to that conclusion.

Yet at the menace of a more active submarine campaign England promptly discovered many things that it could get along without. Going over the imported food supply of the preceding year, it struck off a million tons. The supply of newsprint paper, already severely reduced, was further cut in half. Many hundreds of thousands of tons of such basic materials as iron ore and timber were lopped off. By these restrictions upon imports there was released for the carrying of essentials a quantity of tonnage equal to about four times the submarine wastage in the first month of unrestricted warfare. And every ton thus saved for the carriage of essentials meant so many dollars saved toward the next war loan or for after-the-war reconstruction.

The British blockade taught Germany what a nation can do without when it is necessary to do so. The German submarine has returned the compliment. Probably it will make England a more formidable antagonist than it was before. It must develop far greater destructiveness than it showed in the first weeks in order to win.

To be Expected

WHEN the Kaiser proposed a peace conference, on the bluntly stated assumption that Germany had virtually won the war, and the proposal was rejected, well-informed opinion in England was nearly unanimous that Germany would resume unrestricted submarine warfare. President Wilson had said flatly that unrestricted submarine operations would cause the United States to break diplomatic relations with Germany; and if Germany then sank merchant ships without warning, involving loss of American lives, war was the only rational probability.

A blind man could see that. Germany saw it, of course, and at least ten days before announcing resumption of unrestricted submarine operation began making active preparations for war with the United States—very naturally looking to Mexico as a possible ally who might be useful to her by harassing us.

It is silly to affect surprise at this action on the part of a nation that saw nothing in Belgium except the easiest road to France. The moment a cancellation of the Sussex pledge became probable the United States and Germany faced toward war; and Germany, as a matter of course, began looking for the best places to strike.

We ought to know by this time that Germany fights no toy wars and sentiment has no place in the calculations of her General Staff. At war with the United States, she would exert every means at her command to injure us in every possible way, and she would not be lacking in ingenuity to devise means of injury.

If there is any spot in Latin America, or elsewhere on the globe, where she could stir up trouble for us she would be at it. Anybody who imagines that war with Germany is a sort of young ladies' boarding-school pillow fight is imagining ill for the United States.

Sea Power

SINCE the Battle of Trafalgar, England's supremacy at sea has not been challenged. For a hundred years the British Navy has been the mightiest weapon that any modern nation has possessed. It is doubtful that even the Rome of Augustus could assert so decisive a superiority over any probable hostile combination.

On the whole, no invincible weapon was ever used with greater moderation. The period of British naval supremacy has been the period of evergrowing freedom of the seas. Trade of other nations multiplied undisturbed. England adopted the most liberal navigation policy ever known, throwing open even the home coastwise trade to all vessels without restriction.

England's material interests required moderation; and the fact that moderation best served her own material interests was the surest guaranty of a continuation of that policy. Years ago her ablest men saw that she had already made all the conquests which would be profitable to her, and that what she most wanted was an orderly, peaceful world in which to enjoy and develop her possessions. Her situation inclined her to a liberal, peaceful program; and it was highly probable that she would have the wisdom to see it.

For a hundred years British naval supremacy put no obstacle in the way of the United States. We came to accept it with no more misgiving than over the geological possibility that an earthquake may happen in the Mississippi Valley. But if Germany could starve England this naval supremacy would undoubtedly end, and sea power would shift to the hands of a new nation, formed on concepts of conquest, ambitious for territorial expansion. Germany rejected proposals for reduction of armaments, preferring the system that kept the Continent of Europe armed to the last available man, each nation watching its neighbors, finger on trigger, and straining its resources to muster more battalions.

Sea power in Germany's hands would at once extend that system of competitive armaments over the world. Very few events of a political nature could give the United States greater ground for apprehension than a transfer of naval supremacy from England to Germany.

No Apologies

IN THE present situation the United States has nothing to apologize for; its course during thirty months of European war was right. It was right in rejecting conscription; right in maintaining that compulsory army service should not be adopted here, save under the pressure of evident necessity. It wanted nothing in the Balkans. It had no part in the web of clashing ambitions and mutual jealousies out of which the European War arose. It was right in going to the utmost tolerable lengths to keep out of that essentially mad, anarchic conflict.

It detested such German crimes as the violation of Belgium and the sinking of the Lusitania; but it was right in resisting the emotional clamor that would have made it play the rôle of an armed avenger, when it still might hope not only to gain endurable conditions for itself without war but to save the neutral position that would enable it to advance the ideal of world peace.

Without war it did for many months gain tolerable recognition of its neutral rights at sea; and as a neutral it formulated the idea of a league of nations to maintain peace, which must finally take the place of Europe's international anarchy.

The United States took a risk—the risk of finally being dragged into war ill prepared. But it took the risk in the interest of the highest political ideal—the ideal of a peaceful, ordered, law-governed world.

It has nothing to apologize for.

War and Business

A GLANCE at stock and money market records for February will show that when diplomatic relations with Germany were broken the United States had had thirty months of most important preparation for war. Industrially and financially it had been put on a war basis. What would have taken many months to accomplish if an immediate threat of war had arisen in 1913 was already done.

It was generally assumed that if war came business would go on quite undisturbed, save as its momentum was still further increased. But one difference, important to many individuals, was often overlooked.

In selling stuff to the Allies America had made enormous profits. No such profits would be permitted to pass to individual pockets if the United States itself were at war. Taxation would certainly take at least half of them. Congress had already imposed an "excess-profits" tax of eight per cent; but that was only an indication of the extent to which it would reach after war profits if the country was at war.

Nothing could be sillier than the charge that munition makers were dragging the country into war. They were already getting all the gains of war, with none of the burdens. It must have been a very dull munitions concern which did not know that it could make—or keep—more money by selling to the Allies with the United States at peace than it could by selling to both the Allies and the United States with this country at war, and the English example of a sixty per cent levy on war profits before the eyes of Congress. So far as governmental ingenuity can possibly prevent it, no individual or corporation should profit by war.

This, however, involved a difference to individuals and not to the general business situation. Looking at the latter, and considering how greatly a threat of war arising in time of world peace would have demoralized trade, one sees that a very important preparation has taken place.

A PROPER CHINA WAR LORD

By Samuel G. Blythe

IT WAS two degrees below zero outside the train in China on the second night before Christmas last year—the train, or what they call a train, between Pukow and Tientsin. Inside my car it was not more than seven degrees below, I should say—perhaps ten; but probably not more than seven. I was refrigerating my way to Peking; and it appears, from the testimony of old China hands, I had hit on an entirely unprecedented and astonishing period of frost—unusual, you know, and all that; but apparent.

There was a large bundle of wraps, shawls, furs and mufflers opposite me; and concealed within it was Wiggin—Wiggin, who, also, was refrigerating his way toward Peking. Wiggin is an Englishman, and he assured me that they never, never have such weather at 'ome. There had been another Englishman in the compartment; but he, through some connivance with the conductor, had gone off to the other sleeping car, where, by the skillful utilization of some silver—Mex.—he had secured a two-berth compartment for himself. He was an exclusive person, this other Englishman, at the start, but not so blamed exclusive at the finish, as it turned out. We three were the only foreigners on the train, which had two first-class coaches and a whole string of second and third class, all jammed to the roof with coolies and other Chinese specimens. For our part, in the first-class coaches, we had a rather comprehensive gathering of presumably first-class Chinese; anywhere from eight to ten to the compartment. It was a merry little Christmas train.

Our compartment was a four-berthed affair, two lowers and two uppers. The seats were covered with leather, and the leather was rimed with frost. Also, they were so ingeniously contrived that the part that served as a back to the seat served also as the upper berth when elevated, after the manner of foreign sleepers; but with this improvement: There was a hump in the middle of the back that made it quite impossible for any person over three feet tall to sit even approximately erect. This, as Wiggin pointed out, was undeniably of advantage, for it forced us to bend forward, and thus conserve our natural warmth, which would have radiated from us had we remained upright.

We had tried the restaurant car; but a restaurant car on the Pukow and Tientsin Railroad is no sitting room for white folks, at best, and on a very cold night, when it is packed with Chinese, swathed in ancient fur-lined silk robes, scoffing tea and soup, and practicing other native and catarrhal rites and pastimes, it becomes practically uninhabitable from the Anglo-Saxon point of view.

Chang Hsun is Afraid of Nobody in China, and Everybody in China is Afraid of Him

The Chinese for Nitchevo

SO WIGGIN and I remained gelidly in our compartment. We had emptied our duffel bags and had drawn them up over our legs, and had variously disposed all our other clothes and wraps. Wiggin futilely endeavored to lay a Gladstone bag on himself in a heat-giving manner, and I varied a detailed count of the places where the wind came in, when it reached forty-seven, with a mental catalogue of all the homothermous animals I could recall, coupled with the wish that I was the warmest-blooded of the lot for the time being.

Then the China boy came in. He was a thin China boy, and his natural yellow was changed by the cold to a sort of sickly bluish white. He looked like cold skimmed and watered milk.

"Master go bed now," he said definitely.

"Will it be any colder in bed than it is sitting up?" I asked.

He looked at me in that why-you-poor-fool way Orientals have of regarding the Westerner and intoned unemotionally:

"Maskee that; master go bed now."

Now maskee is the Chinese for nitchevo, and nitchevo is the Russian for skataganai, and skataganai is the Japanese for Forget it! And when a China boy says Maskee he means finish, so far as discussion is concerned. So we unswathed ourselves and went out into the corridor to find out whether there was a place on that train colder than our room. We didn't think it possible; but there was.

Making up a compartment on a Chinese train is an entirely simple and uncomplex procedure. It took that China boy four minutes to fix ours. He threw up the backs of the seats, hitched them to the suspensory rods, laid a thin sheet over each of the leather-covered shelves we had been sitting on, put another thin sheet over that, and a blanket, provided a cylindrical, leather-covered block of wood for a pillow, and said:

"You go bed now."

So we went to bed. Inasmuch as the seat on which we were expected to sleep was tightly built into the wall at both ends and sides, there was no way to tuck in blankets or sheets. They lay slippery on the frosty surface of the leather; but Wiggin and I had had experience on Chinese trains before, and we knew the trick of folding the blanket into a sleeping bag and crawling into it. Wiggin's preparations were even more sketchy than mine. He took off his shoes, and so did I; but I rather ostentatiously removed my collar, which was nothing but swank pidgin.

Now that was about half past eight of this second night before Christmas; and after we had piled our overcoats and our rugs and all the rest of it on ourselves we shivered off to sleep. At every station vast numbers of Chinese stopped before our door and held long and squeaky conversations about their ancestors, I suppose, or some other important topic; and I discovered that Wiggin was possessed of a most beautiful and condemnatory vocabulary as relating to Chinese who disturbed his slumbers. That man could call the Chinese out of their names in more ways than any white man I ever met, and I have heard persons who have made a study of the art. Wiggin had a natural gift for it. He knew all the English dialects, from Whitechapel to Hyde Park; and, as he had lived in India, Egypt and Hong-Kong, he had a smattering of the expletives of other tongues used for telling natives about their personal characteristics and shortcomings. Not that any great result was attained, but that the artistry of it was perfect.

The night wore gelidly along. At one period—about midnight, I fancy—I was engrossed by a dream that related to the refrigerating rooms on the ship coming across the Pacific. I made a tour of the ship with the captain and inspected the ice plant, where the long rows of meat hung frostily. I was dreaming that I had been suspended on one of those hooks in the meat room, and that some Johnnie was prodding me with a stick to find out whether I was properly frozen. Then there came a glow of light and I opened my eyes. The prodding was no dream. There were four extremely unpleasant soldiers in the room, wearing pigtails, dirty, greasy, smelly, and quite unsociable. One of them was poking me with the muzzle of a rifle.

Wiggin was in the same case. One of them was poking him too. I made shift to inquire what it was all about, but got no intelligible information. My prodder addressed me vehemently, but not with a clarity of diction that gave me any light on the proceedings.

"What do these blighters want?" Wiggin asked me.

"You may search me!" I replied. "Unless it is a holdup!"

"Do you mean robbers?" asked Wiggin.

"Yes."

"Well," he said, "I hope they won't steal my overcoat."

There seemed to be no nourishment in getting up; so we stayed in bed. Meantime there was a constant tramping back and forth in the corridor. Our door was open and we could see soldier after soldier clumping by.

"Possibly they are giving a review of the troops in our honor," I suggested, "and want us to be awake to see it."

Wiggin thought that over for quite a time. Finally he said he didn't think that was it.

"You see," he explained, "it isn't likely they knew we were coming; and besides, it's after midnight, old top, and even in this bally country they don't have military reviews at night. It cawn't be that!"

Beds for Topside Men

THE soldiers came through the corridor in unceasing number, each stopping at our door and glaring at us. Our four personal attendants talked to us. One spoke. Then another. Then all together. It seemed apparent that they had something to communicate to us. One put a dirty hand on Wiggin.

"I say!" shouted Wiggin. "We cawn't allow this, you know. Let's chuck the blighters out."

So we chucked them out. It was quite a job, but we had the advantage of a surprise attack on them and rushed them through the doorway. Then we slammed the door shut, locked it, and took stock. We didn't know what had happened, but were sure something had. The soldiers gathered in convention outside and held an excited debate, banging on the door from time to time, eliciting from Wiggin a line of colloquial reprobation that was eloquent, excoriating and extremely personal.

Presently the door opened violently. The conductor was there; and he had a key. Our China boy, chattery with cold and fear, was behind him.

"What," we demanded, "is the meaning of this outrage?"

There was considerable more to our demand in the way of supporting, amplifying and illuminating adjectival trimming; but that was the gist of it.

"Thank you!" the conductor replied, that being the extent of his mastery of the rugged English tongue.

"Pigtail soldiers!" gibbered the China boy. "Hsuchowfu—Chang Hsun—pigtail soldiers—have got—sleep here!"

A light dawned.

"You mean," I asked the China boy, while the conductor stood by and said numerous thank-you's, "that these gentlemen desire to share our compartment with us?" Only I didn't say it that way, albeit that was the sense of it. What I did say was: "They wanchee bed?"

"Shih!" the boy replied, "Shih—wanchee bed—topside man wanchee bed—can do?"

"Finish!" yelled Wiggin, who had been listening intently. "Finish! No can do! Go to hell!" And he slammed the door shut.

"This must be Hsuchowfu," said Wiggin; "and some of those Chang Hsun soldiers—probably a general—want to sleep in here. Not while I am standing!"

"All right," I told him, "if you feel that way about it we'll hold the first-line trenches until they turn the gas on us."

The train stayed at Hsuchowfu—for it was Hsuchowfu—for half an hour. During that period one Englishman and one American maintained the status quo of that compartment against a fat old Chinese general who expostulated that there were two vacant beds in the room; against a

thin old Chinese general who was most vehement in demanding entrance; against a conductor who exploded intermittently with "Thank you!—Thank you!—Thank you!"; and against a file of villainous pig-tailed soldiers.

Of course they could have taken the room at any moment if they had turned the soldiers in; but I think Wiggin bluffed them by the vehemence and variety of his conversation. I was merely the chorus. It was my part to shout "Finish—no can do!" at regular intervals. Wiggin did the solo work; and presently the fat old Chinese general and the thin old Chinese general moved away, with their pig-tailed soldiers, apparently of the opinion that we were both crazy, and bad joss.

There was racket at each succeeding station until daylight, and several attempts to get into the room; but we had the door tied by that time with our neckties.

In the morning the China boy came in.

"Very bad!" he said. "Very bad—all time ride train—soldiers—no proper tickets have got—Chang Hsun men—very bad!" He spoke appreciatively of his own efforts in our behalf. "Me keep them out," he said. "White men have got—finish—very big white man—good boy! You give cumshaw—good boy!"

"What about this Chang Hsun person?" I asked Wiggin. "And what about his pig-tailed soldiers?"

"Terrible old rotter!" Wiggin replied. "Sits down here at Hsuchowfu like a feudal lord and absolutely controls this part of the country. Tells everybody to go to the devil! Most interesting man in China, and most powerful. All afraid of him. Richer than Rothschild. Has the whole outfit terrorized. Does what he bally well pleases, and keeps an army of forty thousand of the most frightful villains to back him up. Runs the Tuchun—military governor, you know—and all the local officials. Don't give a snap of his fingers for any Peking authority. Remarkable blighter in his way. All China kotows to him."

At this point the other Englishman, who had sought seclusion in the smaller compartment, came in. He had a most woeful tale. It appeared from his disjointed conversation that at an early hour in the morning a file of soldiers entered his compartment—the same constituting an enormous outrage to the English flag—and deposited on him a fat old Chinese general and a thin old Chinese general by force of arms; and he sat in the corridor the rest of the chilly night. He announced feelingly that, as the English were at the moment engaged in preserving the liberties of the world, it ill became the Chinese thus to trample on the indubitable rights of an individual Englishman who himself would be fighting were it not that his services were required in maintaining the supremacy of British trade in the Far East! And it was his purpose to report the incident to Sir John Jordan, the British Minister at Peking, as soon as he arrived.

A Swashbuckler of Parts

I never heard whether he did or not; and indeed, we paid scant attention to him, for that day before Christmas was the coldest in North China since records were kept, and we were fully occupied in trying to keep the semblance of life from being frozen out of us.

However, we arrived; and after I had thawed out I took thought of Chang Hsun and his pig-tailed soldiers, and made inquiries concerning this fearsome person. Wiggin was right. Of all the four hundred million Chinese the bully boy with the glass eye is Chang Hsun. He is afraid of nobody in China, and everybody in China is afraid of him. The Chinese speak of him as "Old" Chang; but he really isn't old. He is about fifty-two or fifty-three; and he is the cock of the Chinese walk, the proper topside man, the Number One of China. He is a swashbuckler of parts—is Chang—with a vast sense of humor, and a vaster contempt for any authority save his own. If there is any person in this world who does as he pleases, that person is Chang. And, in China, what pleases Chang most graciously pleases everyone else—even the President and the government; for Chang has them all buffaloed, as we might say in the States.

Chang Hsun maintains his seat at Hsuchowfu, which is a city in the Province of Kiangsi, on the Pukow and Tientsin Railroad. There, also, he maintains his pig-tailed army; and the maintenance of that army proves my statement that Chang has a vast sense of humor; for the government pays the army—or, rather, pays Chang for the army—and Chang does what paying he sees fit to do. And, because of the army and with it, Chang defies the government if he feels like it, and lives and acts with all the freedom and authority of a feudal lord.

I heard many stories about Chang, illustrating his unique and engaging personality, his power, and his assumed and maintained authority. But the one that seems to me best to show not only his engaging sense of humor but his absolute dictatorship in his own territory is the story of his dealings with the Pukow and Tientsin Railroad, which, as Chang uses it, is a personal perquisite, and conducted for his own conveniences and the conveniences of his friends and followers, quite regardless of the fact that the government owns and tries to operate the road as a public utility.

Like a Private Railroad

That means nothing to Chang. He is overlord of Kiangsi and his seat is at Hsuchowfu. Therefore, as the railroad runs through Kiangsi and the trains stop at Hsuchowfu the desires and necessities of Chang Hsun are paramount to any little detail of public advantage. The logic of it is plain. There is the railroad. There, also, is Chang Hsun. Now, as is well known, railways, an invention introduced by foreign devils, are notably superior to Peking carts or donkeys, or chairs, or junks for conveying people from one point to another with celerity. It may not be within the philosophy of Chang to admit that railways have done anything to further the progress of China; but, having been introduced, it is entirely without his philosophy not to use this particular railway as most suits his imperial whim.

Chang's people move about from place to place. This railway may, on occasion, expedite these journeyings. Shall it be said that he, Chang Hsun, overlord of Kiangsi, is so lost to a sense of his dominion that a railway penetrating and crossing his territory shall have the power to extort money from his people as payment, or toll, for their use of its trains? It shall not; nor shall it be said that there is any other authority than Chang Hsun to confer on his people the medium for passage, and the wherewithal therefor.

Chang Hsun scorns the Administration of the Chinese Government Railways. He scorns the officials of the Chinese Government Railways. He scorns everybody connected therewith in any capacity whatsoever, including the Peking Government itself; and when a subject of the imperial Chang desires to ride on the railway the imperial Chang hands that subject a pass. He has set up in Hsuchowfu a printing press, which is used for the sole purpose of printing tickets good on the Pukow and Tientsin Railroad; and those tickets are extremely good, because back of them is not the issuing power of the government but the persuasive power of Chang Hsun's forty thousand pig-tailed soldiers. He prints his own tickets, and issues them liberally. It is said that if it were not for the Chang Hsun passes and tickets used on this railway—if all who travel by virtue of the imperial favor of Chang Hsun paid fares—the Pukow and Tientsin Railroad would show a profit instead of a deficit each year.

Chang Hsun has no railway position whatsoever. What he has is his army and a discriminating sense of his own importance and power, and the abilities of his soldiers. Likely as not, he is the only non-official person in the universe who prints and issues his own tickets for a government railway. Those generals who tried to board Wiggin and myself at Hsuchowfu were traveling on Chang Hsun tickets—"no proper tickets," as the China boy said, but perfectly good none the less. Chang Hsun sees to that.

Combined with Chang's pass bureau and ticket dispensary was a most liberal pass policy on the part of the government officials; and the result was that the government trains carried very few first-class passengers who paid for their rides. They had about as many free riders as the Congressional Limited between New York and Chicago used to have in the liberal days before the Hepburn Law was passed. So, last year, the Minister of Communications decided that this thing must stop. He issued an order that all this pass business would cease on January 1, 1917.

When that order came to the imperial attention of Chang Hsun he sent word to Peking that he was not concerned in the restrictions which the Minister of Communications was seeking to impose on others. But, as for himself—Chang Hsun—he would be bound by no such order; would pay no attention to it; would continue to issue passes and tickets as he saw fit. And, in case the Minister of Communications had not noticed it, Chang Hsun begged to call his attention to the fact that he, Chang Hsun, had extended his scope as pass provider and was, at his pleasure, issuing transportation for the Peking-Mukden Line, and the Shanghai-Nanking Line, and various other lines. Having all these things in mind, would the Minister of Communications, and the Chinese Government, kindly inform Chang Hsun what they intended to do about it?

Well, the Minister of Communications secluded himself for a period of hard thinking; and when he had thought it all over he issued a further and supplementary order, saying that the original order, which suspended these privileges and stopped this practice on January 1, 1917, would not be operative and in effect for a month, pending negotiations with Chang Hsun for compromise. Think that over! An official government order held up because one man said he would not obey it! A powerful citizen, that!

Chang Hsun was originally a mafoo, or outrider, in the entourage of the court, an uneducated man of the status of a groom; but when, after the Boxer troubles in 1900, the Empress Dowager fled to the far places in China, Chang Hsun stood by. He was one of the few loyal and devoted servants who followed the Empress Dowager in her wanderings. He came back to Peking with her and was made an officer in the Green Banner Army, which was a royal division. Yuan Shi Kai, also a royalist in those days, and an officer in the Royal Army, became President, and Chang Hsun, who had risen to high rank in the Imperial Army, retained his position under the Republic.

He is illiterate, not being able to read or write, and has no military education. The official biography speaks of him as "an old-type military officer"; which is the fact. Chang Hsun has no theories or practices about warfare save these: The object of war is to kill your enemies, loot captured cities, and distribute captured women to the victorious soldiers. That is as far as he goes in military science. If so be it seems expedient to torture prisoners before killing them, he knows how torture should be applied. "Though barbarously severe," says an official Chinese biography of him, "he won universal admiration by the manner in which he preserved discipline among his forces, and peace and order in the neighborhood in which he encamped."

The Uncut Pigtails

He does that. He certainly preserves order. In Kiangsi the Chinese saying is: "You can sleep with your door open in Kiangsi." You can; for the people of Kiangsi know very well what will happen to them if Chang's troops are turned loose on them. His soldiers unhesitatingly obey his command, and he holds his officers in a thoroughly Changesque manner. Chang is a poker player of parts. He draws such government money as may be for the support of his army and the payment thereof, inasmuch as it is a part of the Chinese military establishment; and he pays the soldiers such part of that as he sees fit. Then the officers win the money from the soldiers; for all the Chinese are gamblers, and Chang's troops are persistent gamesters. When the officers have the money Chang wins it—and more—from the officers; and has them constantly in his debt, holding them to his flag in this manner, as well as by the force of his personality.

Also, though Chang's soldiers are not good soldiers in a military sense, and he himself isn't much of a general, as his strategy in the first revolution, at Nanking, proved, the soldiers know that, when they go out, the loot is theirs; and they remain loyal in the hope of future loot.

Chang Hsun would not obey the order that came with the beginning of the Republic to cut off queues. He refused to cut off his own queue, and he refused to allow his soldiers to cut off their queues. Hence his soldiers are known as the pig-tailed soldiers, for most of the other soldiers are short-haired now. This was another defiance of the government; not unique with Chang Hsun—for many of the Manchus refused to cut off their queues—but giving an evidence of the arrogance and the power of the man.

Being a humorist Chang Hsun made a joke about the matter when he was asked why he did not cut off the queues of his soldiers.

"It would not be wise," he said; "for each army needs its distinctive characteristic. I retain the queues on my soldiers so that they may be instantly known as my soldiers, and instantly detected in any wrongdoing. If a pig-tailed soldier is observed in any wrong or immoral act, that soldier is marked as a Chang Hsun man, and can be reported to me who will mete out proper punishment, inasmuch as my soldiers are constantly exhorted by me to be virtuous, upright and moral—not only in their warfare but in their private lives."

Fancy that line of talk about forty thousand villains like those in Chang Hsun's army! And imagine what would happen to any person who had the temerity to report one of them to Chang Hsun, who cares nothing about what they do, provided they remain loyal to him and recognize no other authority!

Chang's Summary Methods

The fear of Chang Hsun and his army is not only governmental. The people are afraid of him too. When the Bank of Communications, at the time of the silver panic in Peking, got into difficulties, and there was great popular clamor against the bank and its officials, the government announced that Chang Hsun was a principal stockholder and a director. That was all that was necessary. The people who were for mobbing and looting the bank refrained. They knew it would be most unwise for them to take any such steps against an institution in which Chang Hsun was an owner and director; for, if they did, that imperious person would come up to Peking, or go elsewhere when a branch bank was attacked, and turn loose his pig-tailed soldiers to avenge this personal insult. And the people further knew exactly what it would mean to have those pig-tailed cutthroats turned loose. So they let the Bank of Communications alone. They clamored, but they did not mob or loot.

By 1911, the time of the first revolution, Chang had progressed so far in the favor of the monarchy that he was in command of the imperial forces in Nanking and had permission to wear the Yellow Jacket. The Viceroy, the Tartar general, and Chang, at Nanking were in a frightful way at that time. They heard that the Cantonese, who were in the Revolutionary Army, had supernatural powers as soldiers; that they could run up hills and surmount mountains without effort; and that they flew, as if on wings, over the most massive city wall. Naturally it was a great task to fight soldiers with those attributes; and the fight the defenders of Nanking made wasn't much. Chang being a poor general, did not take advantage of his opportunities on Purple Mountain, outside Nanking, and was thoroughly whipped there by the rebels.

A surrender was arranged, and Chang was to appear, with his forces, outside Nanking on the morning of a day certain. He did not appear. Instead, he and the Viceroy and the Tartar general were hoisted over the wall of Nanking in baskets and with a large number of Chang's troops, who went out through the gates, escaped across the Yang-tse River to Pukow, which is directly opposite Nanking and is the terminus of the Pukow and Tientsin Railroad.

Chang seized all the rolling stock of the road, established his troops in this movable camp, and awaited developments. The dread Cantonese came across the river. Chang moved on. The Cantonese came along. Chang proceeded discreetly up the road. Finally peace was declared; but Chang did not release the rolling stock of the road, which he had almost entirely in his control. He held it and kept his troops quartered in the cars. Naturally the government wanted to open the road. Chang was obdurate.

It seems that the rebels had taken Chang's favorite concubine in the capture of Nanking, and Chang wanted her back. The rebels, it was said, took the concubine to Shanghai and sold her at auction. Chang would not release the rolling stock of the road or permit its operation until the lady was brought back to him. So they hunted her up and brought her back; and Chang allowed the road to open for business.

California Raisin Pie

The King of Pies

FLAVOR, succulence, food value and digestibility—all are features of this luscious California Raisin Pie. You don't "know real raisin pie" until you've tasted this.

A connoisseur could ask no *finer* dish, and a poor man can *afford* it. It's the national dessert by vote of millions.

Sun-Maid Raisins are the reason. These tender, juicy nuggets of deliciousness and energy are unmatchable in making dainty, healthful food-desserts.

First-class bakers are producing thousands of these pies each day. Good restaurants and lunch rooms everywhere are displaying signs—"California Sun-Maid Raisin Pie." Ask for it down-town, you men who like good pie. It will be *your* favorite, too.

Made with SUN-MAID Raisins

Mother, bake it for your family.

TRY the simple recipe below. Buy the raisins in a package like that illustrated here; then there'll be no mistake—you'll have *real California Raisin Pie!*

Every grocer sells the genuine Sun-Maid Raisins—made from California's sweetest, juiciest, tenderest grapes. Whenever you buy raisins be sure to get this kind.

California *Raisin* Pie

One cup Sun-Maid Seeded Raisins, 1 cup cold water, 1 tablespoon sugar, 1 tablespoon cornstarch, 1 level teaspoon salt. Wash raisins, put in saucepan with cold water, bring slowly to boil. Add sugar, salt and cornstarch, which has been mixed with a little cold water. Boil three minutes. Pour into pie tin which has been lined with crust, while hot. Cover and brush with cold milk. Bake in oven with quick bottom heat. Lemon flavor may be added if desired.

The Modern Bread Success

CALIFORNIA RAISIN BREAD, made with Sun-Maid Raisins, has become the nationally famous raisin bread—due to a special formula which calls for plenty of these celebrated raisins.

Master bakers are supplying first-class stores near you. Each slice is filled with raisins. Let the little folks satisfy their craving for sweets with this good bread. Children like it as well without butter—this means economy.

Rare Raisin Recipes—A beautifully illustrated book containing the best recipes for raisin foods and dainties will be mailed *free* to any housewife who writes for it. Send a post card for a copy.

(Concluded from Page 28)

The joy of the revolutionaries was great over whipping the formidable Chang Hsun; and they built a monument on Purple Mountain, commemorating the victory, elaborately inscribed with patriotic sentiments setting forth the details of the glorious event. Two years later, in the 1913 revolution, Chang Hsun fought again on Purple Mountain; and this time he won, defeating the revolutionaries. The battle waged where it had two years previous, but, by orders of Chang Hsun both before the fighting and after he had taken the mountain, the monument was left undisturbed. His soldiers camped round the shaft that told how, two years before, their leader had had the tar whaled out of him, and had gone down to defeat forever. And yet they say the Chinese have no sense of humor!

When he entered Nanking and took command there was a squabble, in which some of his soldiers killed some Japanese soldiers. Chang Hsun contended that his men did not know the others were Japanese; but that did not satisfy the Japanese, and they made protests over the occurrence to Yuan Shi Kai, then President. Chang Hsun was ordered to make a formal apology to the Japanese consul general at Nanking, but delayed until the Japanese became insistent. Then he sallied out one day, with full military escort, and marched to the residence of the Japanese consul general. He went in, made his apologies, and came out.

The Japanese thought they had humiliated him and had caused him to lose face among the Chinese; but they had not. After Chang Hsun left the Japanese consulate he marched to the house of the consul general for each foreign country, in Nanking, and made formal calls; and then gave it out to the people that he, as the ever-victorious conqueror of Nanking, had been paying his imperial respects to these officials of friendly governments. And he had the laugh on the Japanese.

The Life of a Feudal Lord

At heart Chang is a monarchist, of course; for whatever good he has done for himself began under the Manchus. He also considers himself a statesman; and from time to time he sends lengthy communications, or mandates, prepared by his very capable secretary, to Parliament, admonishing that body to be circumspect and patriotic, and generally setting forth a course of procedure. He called two military conferences to admonish the government. As for himself, aside from his admonitory capacity, he remains genially in the middle of the road, politically. His position is that he does not recognize either or any political faction in China. He—Chang Hsun the All Powerful—suffers them to exist!

Chang lives like a feudal lord in Hsuchowfu. The ancient etiquette is observed. All kotow to him. He likes company, entertains lavishly, and is generally agreeable. He is willing to do anything for a friend. Thus far, he has sent in the names of twenty-three men, recommending each for the premiership. It was discovered that these men were Chang's guests; and, in order to please them, he recommended them for high place. He is liberal in this way: He will give away any amount of money belonging to other people. As for himself and his personal fortune, he, beginning not so long ago, has managed to accumulate about twenty million dollars.

Chang, though illiterate, tries to talk in the tralatitious manner of the educated Chinese. His conversation abounds in simile and metaphor; but he bases his figures on nonpoetical subjects. In discussing the revolutionists once, he said: "They are like cabbages with their roots in the air. They are trying to climb a ladder to which there is no top." And so on.

In 1915, when the Japanese demands were up in Peking, Chang came to the Capital. The Diplomatic Corps kept rather shy of him; but one day he was at the American Legation, talking with Doctor Tenney, and noticed that General Barry, then in the city, was reviewing the American troops which constitute the Legation Guard. Chang said he would go over and review the troops also, as he was a great general of a friendly power. There was nothing for it—they took him over; and Chang and General Barry reviewed the troops.

"If you need any help in your country," Chang said to General Barry, "call on me at any time. I'll come over and help you finish anything you start."

BIG BUSINESS MEN *wingfoot* in every walk of life. For *wingfooting* and clear thinking meet on the road to success.

SUPES AND SUPERMEN

(Continued from Page 17)

slightest move for a long time; then Squinty stood up and, lookin' straight at Bernstein, said:

"I'll work for a dollar."

Well, it's jest as well that he did his lookin' then, for two seconds later his lamps were trimmed and his face was otherwise all mussed up. When Squinty could finally distinguish between light and darkness he made a very ashamed exit. The director stood there grinnin' while this was goin' on; and when calm returned he said:

"I don't blame you fellas for that. I wouldn't work for a dollar either. I was sent out to hire you guys for a dollar if I could get you; but, seein' I can't, I'll have to give you two."

The picture we were drawn for was a modern small-town street scene, and there was to be some sort of a row on the hotel balcony. Six were told off to go up and start roughin' it up—Bernstein bein' one of 'em. Now I've done a bit o' travelin' and have seen some pretty rotten things pulled, but this here balcony stunt was the rawest ever. Imagine hirin' a painter to paint your house and then you goin' out and pullin' the ladder from under him, and thinkin' it was a joke! Well, that's about what they did in this scene. The balcony was fixed with a breakaway, and when the boys were warmed up to the struggle some one pulled the support out and down come the whole works. It made a corkin' picture, no doubt; but some of the fellas were badly hurt—one of 'em quite seriously. For the fall stuff the studios usually employ dare-devils at ten dollars a day who know how to fall from en'thin'. These guys were jest cheap; and to save those few dollars they pulled that miserable trick.

If you remember, this was the bunch that refused to work for one dollar—still feelin' very 1776 after beatin' up Squinty. Bernstein started the survival of the fittest by lightin' into the director; and, as he seemed to be the guilty one, the rest of us jest stood round to see that he got a fair wallop at the bird. In a minute the whole place was in an uproar and Bernstein made his get-away in the confusion.

Every now and then I read in the papers that Americans are softies and have lost their "militant spirit"; but there seems to be lots of punch in certain fellas out in this part of the world. Anyway, you couldn't convince the big directors that we can't raise the grandest army of roughbucks in the world.

Mr. Meade Hits the Pavement

Another time, in a Mexican story, a bunch of us were sittin' round waitin' to go on, when a camera kid I knew came up to me and said:

"Dan, I jest heard the lead talkin' to the director, and they are framin' one I think you ought to know about. The scheme is to have you all sittin' round the entrance of the adobe house, and Meade will roll off the roof right into the middle of the bunch, usin' you for cushions to break his fall. The director suggested that he might incidentally break your necks; but Meade said he'd fix it to have nothin' but Mexicans.

When I heard this I went and dug up the *patrón* who bosses the Mexicans and tipped him off that this curly-haired brute was goin' to use his countrymen as shock absorbers for a pretty fall. I couldn't understand what he called out; but jest as Meade got to rollin' nicely those boys opened up the prettiest hole you ever saw, and Mr. Gansevoort Meade hit the adobe pavement with such realism that it loosened up about a thousand dollars' worth of bridgework. And the joke of it was he couldn't say en'thin' about it—if he'd had the breath, which he hadn't—without tippin' his hand. Anyway, he had that bump comin'.

The Mexicans are the queerest bunch that work extra. They are employed by a *patrón* and consequently take orders from him only. A director can shout his fool head off, even in bad and violent Spanish, but they won't do a thing until their *patrón* tells 'em to. They work best in the battle stuff, for they are naturally better actors and more dramatic than Americans. The lowest-browed dub in the bunch has some artistic sense and will take a fearful drubbing for art's sake.

Strangely enough, they fight with much more enthusiasm just before lunch. The studio lunches are banquets to fellas who've grown up strong on chili beans. I once heard a director tell a *patrón* to tell his men that he was goin' to pay 'em five dollars for their day's work; but he expected 'em to earn it. Say, you ought to've seen those black devils fight! They'd liked to have killed one another.

So long as I have told you those rummy anecdotes, I'm goin' to get another off my chest and then turn to pleasanter subjects.

We were workin' in a picture one day at the beach, where the hero had to climb up a cliff by a rope, with four or five of us followin' him up. When Edgar was near the top, and the rest of us were danglin' below him like a rope of pearls, we heard someone up above call out to cut the rope. This cheerful direction was given without any warning, for naturally none of us would 'a' gone aloft if we had known that the rope was to be cut. You can imagine what a splash we made as we all pitched down, one on topa the other. They no doubt got some "swell film"; but a pinhead director could get a "swell murder" if he actually had a fella kill his mother in front of the camera. This was the first time that I'd been caught in any of these cheap stunts, and my spirit was sorer than my old bruised hulk.

The Squirrel Hunt

The first thing that occurred to me when I untangled myself from that squirmin' mess of men was to get my hands on the gent who said to cut the rope. I looked up to the top of the cliff, where the other camera was located, and, seein' the director peekin' over, I started up after him. It's jest as well he beat it when he saw me comin', for I was not very amiable at that moment, and there's no tellin' what a fella's likely to do when he's het up.

There're at least two, and sometimes as many as four, sides to every question; and I don't want you to think that all directors treat their extras like these few I've mentioned. Then, too, there are no end of extra people who are entitled to little consideration. Checkgrabbers, who stall every minute they can, are a fearful expense and a darn nuisance. At some studios it got so that a fella would go to the office and get his ticket; then, at the first opportunity, beat it off the lot, but turn up in the evenin' to get his ticket cashed. Nowadays you get your card, go to the costume department and get it punched for the spangles and props; then, when you return the stuff, get it punched again; and then finally you must get it signed by the assistant director—who knows whether you've been workin' or not—before you can get it cashed at the office. Even with such precautions, many of these dubs find ways of beating the companies.

This trick is easiest to pull where there are many people engaged, and the scene is spread over a lotta country. In a big Babylonian ten-reeler we were makin' last spring there were so many people in the picture that they stalled by hundreds. In one very excitin' night scene, where everybody was supposed to be in the picture, I saw at least forty Babylonian warriors playin' cards and smokin' cigarettes on the walls of Babylon while the Persians were thunderin' at the gates. No wonder they got in. A bunch of these fellas were caught and had to give up their tickets; but, at that, there was a pile o' money lost.

Checkgrabbers who sneak off into the brush to smoke or sleep durin' the big outdoor scenes are called squirrels. Most companies have horsemen for no other purpose than to jest ride round and stir them out. In a Civil War picture last month some powder monkeys went out to plant dynamite under an army wagon, and, for some reason, they decided to overturn it first. When they did so, out rolled five squirrels!

The rottenest thing about the checkgrabbers is that they crab the game for all of us. No matter how honest and ambitious a fella is, he is open to the same suspicion as these guys.

The greatest pests in the game are the cheap skates who try to "make paper" with the directors by flatterin' 'em. They stand round within hearin' distance of the director and tell everybody what a wonderful fella Mister So-and-So is. Then they are always buttin' round askin' the boss whether their make-up is satisfactory.

Some directors love this kind of cheap flattery and are always trailin' a bunch

WING FOOT

LAWN HOSE

A little domain of your own—your flower garden! How your hope centers in each tiny seed as you wait for it to sprout, to bud, to flower. And then the scarlet cluster in the vase. And then the joy, "I have created it!"

Freshening the garden plot is such a pleasant task when Goodyear Wingfoot is your lawn hose.

Free from tugging and untangling, for Goodyear Wingfoot is kinkless lawn hose. Free from cracks and leaks, for Goodyear Wingfoot is burst-proof lawn hose.

And then the inbuilt goodness in every foot of Wingfoot Lawn Hose—rubber goodness, structure goodness, wearing goodness, Goodyear goodness.

Be sure it's Goodyear Wingfoot Lawn Hose you buy. It is guaranteed for two whole lawn hose seasons.

How To Get Pure Paint Mixed To Your Order

Select Your Color

Specify Carter Pure White Lead and pure linseed oil. Leave the rest to your painter.

A skilled workman will match any color you choose, spread a brushful for your approval, then mix the paint to suit any condition of surface or atmosphere.

You may depend upon it that pure paint mixed from

CARTER
Strictly Pure
WHITE LEAD
"The Lead With the Spread"

and pure linseed oil will protect your house from wind and weather, expanding in summer's heat and shrinking in winter's cold without a crack or break.

Ask your painter to show you "The Paint Beautiful," a portfolio of the latest color schemes for city and suburban homes. Write for our free book, "Pure Paint," a text book on house painting, and "1917 Fashions in House Paint."

Carter White Lead Company
121st and So. Peoria Streets, CHICAGO

of worshipin' favorites round with 'em. There are others who are bored to death with these sticky slobs and think up all sorts of picturesque ways to hand it to 'em. A favorite one with Goodhue was to start a fella runnin' out of the picture and forgettin' to tell him to stop.

One day a man named Haney got Goodhue's goat so hard that he grew pretty peevish; and I figured that he was framin' sunthin' excitin' for Mr. Haney. Sure enough, when we were about through Goodhue calls him over and says:

"Haney, I want you to load on your minin' kit; and, startin' by this tree, I want you to walk straight out of the picture. And don't turn round for en'thin', because I'm goin' to try a long-distance slow dissolve. I want to get one of those lonesome effects of a chap headed for the settin' sun."

In less than a minute Haney had grown six inches and a half round the chest. To be picked for the final dissolve! This was fame that came to but few.

We all stood round watchin' to see how the camera man would work his shutter; but when Haney had gone beyond hearin' distance Goodhue, with his fingers to his lips, ordered the cameras struck and motioned us all to our machines. By this time Haney had gone about a mile, and he never so much as turned his head. Take a chance of spoilin' such a picture? Never!

This comedy was enacted up in the San Fernando Valley, where the distances are perfectly magnificent. To'rd the west, as far as the eye could see, stretched a limitless waste. After we had been ridin' for about ten minutes Goodhue ordered the machines to stop.

"Boys," said he, "I never saw such a sunset; let's wait for a minute and drink it in."

It certainly was grand! And 'way, 'way off yonder we could jest barely see a little black spot on the horizon, which grew less and less, and finally disappeared. It was Haney dissolvin' into the settin' sun.

If you read the movie magazines you've discovered by this time how all the leads broke into the pictures. They love to tell of the way they struggled against fearful odds and then arrived by their own superb powers; or else how the director went over backward the first time he saw 'em, and, as soon as he recovered, got 'em to sign a contract for a measly three hundred dollars a week that they had a fierce time breakin'. They also assure you that, if you are as handsome, intelligent and persistent as they are, you can also make the grade to film fame. As competition with their physical splendors and splendid brains is too hopelessly discouragin', about all that's left for most of us is persistence.

How to Break In

As very few of the supermen arrive via the extra job, their stories are more interestin' than helpful. So I'm goin' to tell you how the ninety-and-nine break in.

First of all, it is absolutely necessary to appear in person. You'll never get a job by writin' for it, or thinkin', because you've mailed your certificate from the Correspondence School of Expression, that they'll send for you. If you've had any experience state it, and make your statement strong; leave a photo of your fair young face; and then be sure to live on a telephone. Now if you have a good, strong wife who's willin' to work, perhaps you can stick round for eight or ten years waitin' for the director to send for you, as he said he would; but if you want to get action before you are good for only old-man parts you'd better keep makin' the grand tour of the studios.

It's a pretty tiresome job, for they are far apart; but after a while you'll begin to get tips where work is likely to be had. If you hang to it long enough—and this will depend upon your wife's ability to keep you in that station of life which will assure a good front and enough fuel so's you can make the rounds—perhaps some purple day you will be called.

If you once start out after this movie job you can't work elsewhere; for the very day you're off the job is the day they want you. That's where a good, strong wife can tide a fella over. I knew one chap that waited at a certain studio continuously for six weeks; then one day he tried his luck at another, and while he was gone the director came out and asked for him. One of his friends called the lad up that night and told him about it, so he hotfooted right over the next mornin'; but the director gave him a bawlin' out for not bein' round when he was wanted.

A pull works in this business the same as in any other. Great men often have lowly acquaintances; and a bell-hop who gets very friendly with the director who lives in his hotel will stand a lot better chance of landin' a job than a fella without any friends on the inside.

Extras are hired by the assistant directors; or, as some studios make a separate job of this, by the "talent man" or "employin' director." In order to hold their jobs these fellas have to show good judgment in their choices; but, after all, they are jest as human as the rest of us, and often will fix it so's some fella they like can make a few dollars.

The extras that come from the stage seem to make the grade easier than the others—not because they have more talent, but because they have more crust. They think a lot better of themselves than ordinary folks and have a way of stickin' round until they impress the talent man that they are the goods. There isn't a doubt that there is a lot of fine, smolderin' talent lyin' round on the benches outside the office, but the owners haven't got the front to go with it; and, b'lieve me, this is no game for modest violets.

Failures Who Hate Successes

As Los Angeles is the terminus—that's a softer word than finish—of many a road company, the town is full to overflowin' of "artists" who are "restin'." But no real artist wants to "rest"; so he offers his services to the studios, and if there is a ghost of a show he will get it while the ordinary humans are readin' special articles on How to Break In.

Dunc and I landed because of astrology or omens, or sunthin'. We fortunately began in comedy; and Dunc, bein' a real comedian, pulled some bully gags that cinched our jobs for a while, at least. He worked them all with me, our physical contrasts bein' funny to start with.

I don't much blame the police for forbiddin' our pictures where they have the power of censorship, for our portrayal of these dignified guardians of the law was not such as to command the respect that they think is their due. I've found that there are three classes of people who can't take a joke—school-teachers, ministers and the police. These professions seem to put a crimp in a fella's sense of humor.

I was remarkin' this to Dunc the other night, and he agreed; but said I ought to include extra men.

"It's my observation, Dan," said he, "that the bum actor is the most serious and egotistical ass in our social cosmos. Nine-tenths of the dubs we work with think they are really good, and that the fellas at the top are a bunch of prunes who have landed in the headlines because of some drag. Jest go down to the Rampau Bar some night and hear 'em rave.

"'Griffith?' says one. 'Why, I knew Griff when he didn't have a bean to his name! Met him down in Menfis one time, tryin' to beat a hand-out; and I slipped him a dollar. Now he doesn't even know me!'

"'Walthall an actor?' pipes up another. 'Ah, ya make me sick! He was nothin' but a punk super when I was playin' opposite Edna May!'

"'Arbuckle funny?' comes from 'way down the bar. 'He's jest as funny as an ulcerated tooth! You know why he holds his job, don't you? Well, the big boss don't dare to fire 'im. Why? Well, this is jest between us; but they say that Arbuckle knows where the girl is buried.' And so on.

"It's queer," Dunc continued, "how all the leadin' men of the good old days are now workin' extra. To hear 'em talk, you'd think Mansfield would 'a' been carryin' a spear if it hadn't been for their splendid support. No, Dan; these guys are anatomically shy a funny bone. And vain! S'help me, I b'lieve an extra man's dream of heaven would be to drive through town in a pink automobile with his name painted on the side!"

Of course Dunc puts it a bit strong, even if there is some truth in what he says. I myself think the extras are funniest when they begin to tell you of the scenarios they've written. They always cast themselves for the lead, but they never send their scripts in. Why would they? The studios, they always say, would only steal the ideas and send them back. That has been the

Styleplus Clothes $17

Trade Mark Registered

The price remains the same!

The Great War has sent prices for practically everything soaring upward. But the price of Styleplus remains the same! In the midst of this era of rising prices we have achieved the *almost impossible*—**men can still be well-dressed for $17!**

You can continue to enjoy the splendid Style and Wear of Styleplus at the same easy-to-pay price of $17! The same snap and style in the fabrics—all-wool or wool-and-silk. The same hand tailoring! The same skill in fashioning the models. The same sturdy understructure to the clothes, all carefully water-shrunk. The same wide variety in fabrics and styles. The same honest ***guarantee,*** giving you complete confidence in your purchase.

At the outbreak of the war we foresaw present conditions and contracted at the prices then prevailing for huge deliveries of cloth this season, effecting vast savings. The demand for Styleplus has doubled, we doubled our output and thereby greatly reduced our manufacturing costs.

The great scale of our manufacturing, concentrated on this one-price suit, has enabled us scientifically to organize our shrinking plant, our cutting rooms, our tailoring department, and our selling and distribution and thus make further great savings hitherto thought impossible. In addition, both we and our loyal merchants are contenting ourselves with a minimum of profit to keep the price the same—$17.

Visit the Styleplus store today and see for yourself what a remarkable achievement this is! Buy one of the new spring Styleplus suits and walk out well-dressed and dollars to the good.

Style plus
+ all-wool fabrics
+ perfect fit
+ expert workmanship
+ guaranteed wear

One of the leading stores in nearly every town and city sells Styleplus. Look for the Styleplus window display. Look for the Styleplus label in the coat. If there is not a Styleplus store in your town, ask your favorite dealer to order a Styleplus suit for you.

Westinghouse

ELECTRIC UTILITIES FOR THE HOUSEHOLD

WESTINGHOUSE ELECTRIC

"What Makes It Go, Grandma?"

Swiftly moves the needle, leaving a straight, unbroken trail of stitches, while Grandma sits at ease, with nothing to do but guide its course.

What makes the machine go? A simple little device, the Westinghouse Sew-Motor, that changes any ordinary sewing-machine into an electric machine.

How different from the old-fashioned way of sewing! No treadle to work up and down till one's legs are stiff and one's back aches. No more fatiguing toil to make the doctor say "You'll have to stop running a sewing-machine."

The Westinghouse Sew-Motor has brought a new joy into Grandma's life, just as it will into the lives of thousands of other women, old and young. To many it means that they can again enjoy the pleasure and economy of doing their own sewing. To many others it means relief from the tax on health and strength they have been paying for running a machine.

The Sew-Motor is the latest Westinghouse appliance to be added to the list of household lamp-socket utilities, such as the electric iron and the vacuum-cleaner.

It has a number of distinct Westinghouse advantages. A few are mentioned here:

It never has to be removed from the machine, as any modern machine can be closed with it attached.

It permits sitting in a natural position at the machine. To regulate the speed the foot rests on the treadle, not the controller.

It runs *at any speed* from 1 to 1000 stitches per minute.

It has belt-drive—not friction-drive—insuring steady, quiet operation. With belt-drive there are no parts to slip or wear out.

Sold by electrical dealers, light and power companies, department and hardware stores. Price $15. It must be a Westinghouse or it isn't a Sew-Motor. If your dealer can't supply you, write us.

WESTINGHOUSE
ELECTRIC & MANUFACTURING COMPANY
East Pittsburgh, Pa.

(Continued from Page 34)

experience of so many—to hear them tell it—that they guard their secrets jealously; unless you should ask them—then you are in for a bad two hours. It's a shame that these great dramas are doomed never to dram; but that's always the way with genius!

You might not think from lookin' at some of them that they would worry Francis X. very much; but that's because you've never seen their pictures. Where they get 'em is a secret of the dark room, for it is hard to b'lieve that science could be so inaccurate. Yet they will flash carbon prints on you that would make a marshmallow taste like a quinine capsule.

The reason that the still men all go crazy is due to the pesterin' that these fellas give 'em. After a moving picture is shot, the still man always sets up his camera to take a picture, which will be used for advertisin' purposes; and if a fella can crowd into a good close-up alongside of the star, he'll beg a print off the still man, which he will carry until it is worn out, showin' everyone how important he was in that story. And if they can some day get the poor man to shoot a still of 'em all alone, they have got photographic proof that they were playin' at least second lead. Oh, but best of all, if they can nail a few inches of film showin' 'em in a close-up, their immortality is fixed. What manicure girl wouldn't be impressed to see her cutie in a close-up with Wallie Reid?

But, after all, I don't b'lieve that the stock actors and leads are very different from the extra man in these respects. I hear 'em all pullin' pretty much the same patter. We've got the largest If I Had That Fella's Chance Club in the world.

It isn't everybody who knows his limitations as well as Dunc, and it isn't everybody who will listen to another's estimate of himself as patient as I do.

"Dan," said he to me one day, "you're not built like the Apollonaris Belverdere; nor have you a face like Lillian Russell, but you make a good heavy; and when you wore the tin cans in that Joan of Arc picture you were the grandest knight in the bunch! And in comedy you are sure funny! But that's God's fault—not yours. So, don't, I beg of you, ever spill this stuff about not havin' a chance to show your art. If you're goin' to be an actor, try and be original."

That's my number; but I knew it before Dunc called it. I am perfectly resigned to stay within my limits—some day I'll enlarge my limits; but that's another matter—and I'm happier for it. At least, I don't suffer the shootin' pains of egosipelas; that dread disease which claims so many of my brother artists. No; Dunc and I decided that our physical and educational limitations forbid us ever settin' the world on fire. But that reminds me that we come pretty darn' near doin' it once, anyway.

Fighting Enough for All

Late in the summer of '15 we went up into the Great Tejunga to make some battle pictures, and we sure did have the battle of our lives.

It was fearful rotten judgment that ordered a battle picture in such a place before the rains had come. Here was another place where the director could 'a' learned a pile from the extras, for among them were hundreds who knew the mountains well, and they freely predicted the trouble we were in for. But, as unconcerned as though we were pullin' studio stuff, the powder monkeys were ordered to plant powder bombs all over the bloomin' landscape.

After the battle started, because of the dense smoke from the bombs, the director did not notice that the brush was afire in several places until it had got a fierce start. When he saw what he had done he ordered the picture stopped and for us to turn in and fight fire.

Even on an apparently calm day there is likely to be strong air drainage up those cañons, and in less than ten minutes the fire got started up the alley and all the devils from Cork to Connaught couldn't 'a' stopped it.

When the director saw how futile our efforts were he told off some of the men to round up the scattered members of the company, and the camera men were ordered to kick in and get some good fire stuff. But the opportunity to get this wonderful film was denied us, for we'd no more'n got started when four rangers rode up; and, polite as en'thin', one of 'em said he hated to put us to any trouble, but that our Uncle Samuel gave him authority to impress all able-bodied men into his service to fight fire.

The director argued about the expense of his two hundred men, and how he simply had to get back to the studio; but the ranger was cold-eyed and firm, and the young cannon he toted in his belt was no prop.

So off we went in squads of fifty under the leadership of rangers to see whether we could stop what we had started. By this time it looked as though the whole world was on fire; for miles the woods were burnin' with a roar that was downright terrifyin'. Pretty soon we were joined by other rangers, comin' from different directions, and the way they went about their business was inspirin'. If you'd 'a' seen that fire and the handful of men who set out to stop it you'd 'a' thought there wasn't a chance in the world. But fire fightin' was their business and they didn't seem a bit discouraged. The rangers knew exactly what to do, and went off with only a word from the head ranger.

The Madness of Mr. Meade

The thing that tickled me was the way the ranger handed it to Meade, our leadin' man. Meade was mad and indignant over the whole thing. He didn't think the work was his social equal; and he didn't want to soil his ridin' panties and pretty putties. He beefed so much about his troubles that the hard-hearted ranger jest naturally picked him out for the hot stuff. The way that poor milk-fed boy swat and swore kept the rest of us good-humored all night.

I learned later that the studio had a fierce time squarin' itself with the Forest Service for havin' started the fire. Nowadays we're not allowed to pull any of that stuff without the presence of a ranger to show us where to head in.

A mighty good feature of this studio is the Suggestion Department; for, besides payin' a fella for any notions he might have it calls the attention of the management to your work. I made fifteen dollars one month and twenty-five another by suggestin' some new gags for the comedy stuff.

It's curious that studios have personalities, jest like cities. Dunc and I beat it round for two years from one to the other, and no two of them was alike. One of the first places I worked in was well organized, efficient and apparently clean; but for some reason the women didn't care for it. I made a pretty good guess at the answer when I got acquainted with the manager. Falstaff looked like a Saint Francis by comparison. Some studios are laid out like small fairgrounds, with parks, walks and gardens all round; then there are others that look like the pictures of model towns—fine concrete buildings, all in rows; automatic sprinklers, and clocks to punch. These latter are the cannin' factories; efficient as the devil, but about as inspirin' as a boiler shop.

Perhaps the most excitin' studios are those thrown up by some new rich fellas that are breakin' into the pictures for the first time. Every gambler that ever made any money out of a film success right away thinks he is a producer, and, after roundin' up a million dollars or less from his stock-jobbin' bunch, lands in Los Angeles, leases ten acres, wishes together a big ramshackle studio, and starts takin' pictures. The pickin's for the actors and directors are fine while they last; but unfortunately—or fortunately for the public—the company goes fluey about the third release.

Dunc and I worked for six weeks at one of these mushroom studios in a big American war drama; and it was a riot. The directors were mostly dubs and the extras put it all over 'em. You may wonder how a fella who was editin' a trade paper last week or a well-bred 'rah-'rah boy right outa papa's office in New York could jump in and start takin' pictures—even bad ones! Well, it's the camera man that does it. They, of course, must know the technic of a picture, and they have to quietly coach the director, or the result would be an awful mess. Whenever you see a new director standin' close up to the camera man and talkin' as though he was givin' him instructions, you can make a fair bet that he is askin' the boy who turns the crank what he thinks of the action.

I'm afraid I was responsible for the cannin' of one director at this studio. He was a vain devil—ignorant and abusive, and thought he had to show everyone in the

Gentlemen's Clothes

There are those in my Profession—(and Tailoring Clothes for Gentlemen IS a Profession)—who boast the BEST AND THE CHEAPEST—in one breath.

A little black ink, a little white space—and anyone can strut in print. Yet I can say of KAHN Made-to-Measure CLOTHES, with sincerity and conviction, that they fulfil the printed promise. From collar to cuff, from hip to heel, they breathe the spirit of genuineness—and of right intent.

They are Gentlemen's Clothes, made to your measure, on the KAHN QUALITY platform. The positive proofs are close by. Seek the KAHN representative in your town.

"THE-JUDGE-ON-THE-BENCH"

KAHN TAILORING CO.
OF INDIANAPOLIS

cast how to do the least thing. The trouble came because about forty of us who were workin' in a big scene couldn't help laughin' in the presence of death. After all, it's human nature to cry at weddin's and laugh at funerals; so there was no particular reason for him to get so miffed.

The king had been eatin' too many tarts or sunthin', and was lyin' in a great canopied bed, sufferin' from royal cramps; and, while thus indulgin', he was supposed to cash in—with all the chamberlains and chambermaids of the royal apartments standin' round registerin' royal grief.

Well, the king gent didn't seem to be pullin' his demise as the director thought a king would, and he became angry and abusive. "Don't you know how to die, you great big fish? Well, I'll show you!" he screamed, and rushed over as though he intended to punch the head of our beloved monarch; but instead of that, he jumped into bed, shoes and all, kicked the king out on the far side, and then gave his ideas of the croakin' of a king.

His Highness looked so pathetically absurd standin' there takin' lessons in deathcraft from such a mad and excited near-corpse that we all burst out laughin'. This made the director so furious that he jumped out from under his royal tent and bawled us out most scandalously. He ripsnorted round until his buttons were all over the place.

When he had us all properly squelched he started the scene all over again, and the poor old king did his gol-darnedest to die accordin' to the script. When he got to the final spasm and began to roll his eyes I thought of how funny the director looked in bed with his boots on, and I let out a little snort. Someone else giggled, and we were all howlin' again.

The director jest turned white and began to rave, stompin' round like he was in a padded cell. Then he pulled a line of profanity that no woman should have heard; so I drilled up to him and told him that he'd have to cut out that talk; that it wasn't nice. Then he turned loose on me.

Jest at that moment the general manager, hearin' the noise, came along; and, seein' the director's rage, called him aside and says: "I'm afraid, Mr. Weldon, that you are temper'mentally unfit to handle men. I'll ask Mr. Davis, your assistant, to finish the scene, and you come with me until you are feelin' calmer." We heard next day that he was fired.

After our first start on this business Dunc and I decided to move along slowly on legitimate lines rather than to go after the swollen wages of the dare-devils.

When Dare-Devils are Hurt

Some of the dare-devils are in the garage most of the time; but, of course, the company has 'em all insured. If a fella is hurt doin' ten-dollar stuff he gets ten dollars a day for two weeks; after that he draws sixty-five per cent of the wages he was workin' at for fifty-two weeks—if he's in the hospital that long. Then they stand suit for damages or settle. If a chap's killed no doubt the studio will buy him a handsome satin-lined wooden overcoat; but as yet few have attained that raiment.

Here's a funny one: A fella, whose name I've forgotten, was notorious for his dare-deviltry, and curiously had never once been to the hospital; but one beautiful summer day he was quietly drivin' his girl to the beach when he was run into by a speedin' flivver—and darned if he wasn't killed, though the girl didn't get a scratch!

You mustn't get the idea that all the dangerous stuff is done by professionals. Some of these poor extra devils get so hard up that they become desperate and will offer to do en'thin' for a few dollars; and they are usually the ones that are hurt. I've seen no end of 'em jump into the ocean when they couldn't swim a stroke. They'd take a chance o' drownin' before they'd lose that three dollars.

I remember one wild-eyed fella who offered to do a fall from an aëroplane for five dollars. "Fact is," said he, "there are two things I can do before I starve: One is to risk my life for a picture, and the other is to steal. As my life doesn't seem to be worth a damn, I think I'll take the risk. Besides, the finish would be finer!"

Whenever we do water stuff some of us find out those who can't swim, and then arrange to have good swimmers go in close by, so they can help 'em to a landin'.

The cowboys are another type of dare-devil; but, as their risks are rare, they either work on regular salary or as ordinary extras, gettin' extra pay for any dangerous ridin' or falls they have to make.

They are the hardest-workin' and most conscientious extras in the game. They tend mostly to their own business, but will do any darned thing the management asks them. They've got no highfalutin' notions that manual labor will ruin their art. They are also the happiest bunch on the lot, doin' a pile of skylarkin'.

Cowboys are used in all parts requirin' good horsemanship—cavalry, Cossacks, and even polo players; and, of course, doublin' with the leads in all dangerous ridin'.

Some time ago, when the studios had cowboys on regular salary, they got from thirty to forty dollars a month, and found; but those were the days when everyone was makin' Westerns. Europe bein' the biggest buyer of this class of pictures, there has been a big slump in Westerns since the war. Nowadays the cowboys are free-lancin' it, jest like the others.

If a Western picture is bulletined at a studio now it's very amusin' to see how the ordinary extras will try to break in. They'll tear downtown, rent a pair of chaps and a big hat, turn up at the studio chewin' tobacco or rollin' brown-paper cigarettes; and then stand round bow-legged, hopin' that they look like regular cowboys.

"If your face was your fortune, Dan," said Dunc one day, "you'd be in the hands of a receiver. But, at that, you need your old pam to stick grease paint on, so you'd better shy the dare-devil stuff. And as neither of us has ridden en'thin' but the brake beams, I guess we'd better not imitate the cowboys."

No, siree! We two old battle-axes stuck strictly to our knittin'; and we were goin' to arrive if my good health and Dunc's brains were worth en'thin' to us.

Days That Could Not Last

The copy books also say that excellence will tell; and in this great big seethin' bunch it ought to be easy to hear it if it tells ever so little. When I saw that most extras were jest checkgrabbers, and when I'd sneak up on about forty, loafin' and smokin' in the scene docks, I thought to myself there was a good chance even for a couple fellas like Dunc and me.

Once in a while a guy breaks into the extra game that has education, culture, and all the trimmin's that go to make a success. If they get a chance they do well too. But they don't get many chances, for the directors know the type well. The trouble is booze. They are not dependable, and this business requires that quality above all others. I met one, an Eastern college fella who'd been in the shippin' business in Boston, but had gone to the devil with liquor. He'd come all the way to California to work outdoors, thinkin' the state was goin' dry.

Mr. Mills, the big director of our studio, took me aside the other day and gave me some valuable tips. He says I've got a fine picture sense and could work into the technical department if I had more of an education. Well, a lot of people have got an education when they were much older than thirty-three. When I see the care and trouble that the Research Department goes to in order to get accurate sets, I realize that a fella'd have to be mighty well informed to hook up with them.

If you are observin' you can learn no end of things right on the lot. Think of havin' the whole world come to you—foreign lands, streets, houses, animals and people, absolutely true in every detail! I've gone from Greenland's icy mountains to India's coral strand—all in one day.

And, to prove that the copy books are right, my perseverance has landed me in stock at thirty-five a week. This is all the more notable, for of late the studios have been cuttin' down their stock. At present most of 'em are employin' only a few leads and character people, and hire a whole new crew for each picture.

That's why workin' extra has become so respectable of late. We used to look with awe—if not admiration—up to the stock actor; but nowadays the ranks are so full of 'em, who are glad enough to work for even a few days, that to work extra no longer means social inferiority.

No doubt the present arrangement is good business, but it's pretty tough on the actors. But, alas, those gorgeous get-rich-quick days couldn't last forever.

Sew-E-Z
Hamilton-Beach, Racine

Labor Saving Home Motor

This Little Home Labor-Saver

Will sew for you without foot pumping—Will keep you cool on hot, sultry days of summer—Will grind and sharpen your carving knives—Will clean and polish your silverware and perform many other household duties—**Will work a week for you free.**

Simply place Sew-E-Z Motor on your sewing machine next to the hand wheel—no screws or bolts are needed. The little self-starter starts and stops it instantly—the slightest touch of your foot makes it sew fast or slow. Always starts right, never breaks the thread. Makes sewing easy—relieves all strain—saves your health.

The Fan attachment instantly changes this Home Labor Saver into a handsome, high class fan that will make brighter and happier hours in your home during the hot, sultry days of summer.

The Grinder and Sharpener keeps your carving knives sharp and ready for use. The Polisher and Buffer keeps your silver bright and shining and gives it that pleasing lustre that adds beauty and cheerfulness to your dining room.

One Week's Service Free

Sewing — Grinding — Polishing — Fanning

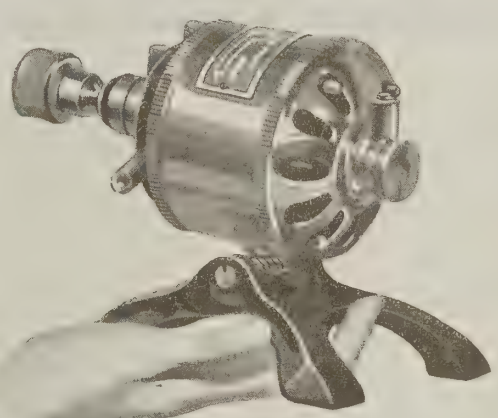
No Cost — No Obligation — simply phone your dealer "Send my wife this all-around electric motor." Do this today — right now.

At the end of a week your dealer will take Sew-E-Z back if you do not want to keep it.

Six thousand dealers are ready to place this wonderful little motor on trial in homes everywhere. Have your dealer deliver YOURS today.

Hamilton-Beach Mfg. Co.

1005 Mate Street **Racine, Wisconsin**

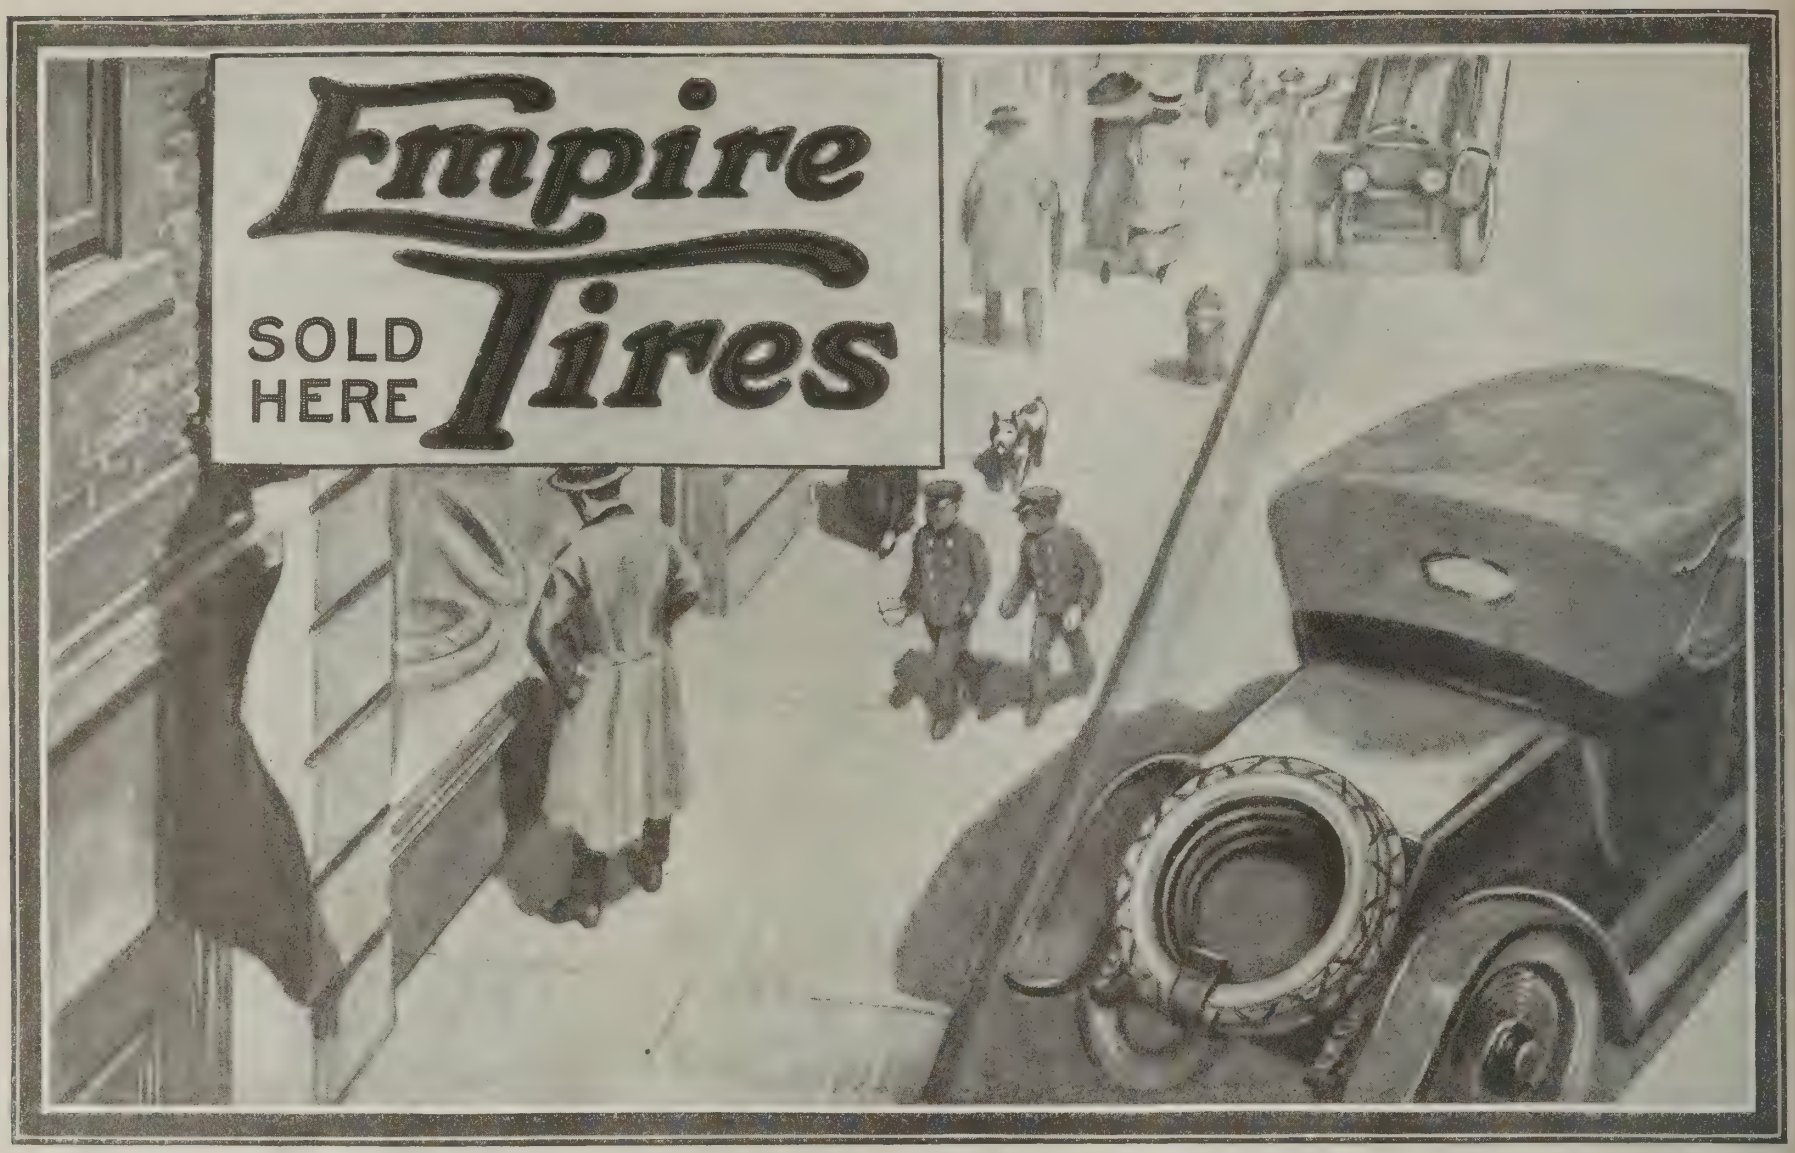


I use it to run my sewing machine

Then I use it as an electric fan

Then I use it to sharpen all my cutlery

Then I use it for cleaning my silver



Under this sign we are selling extra miles

For 30 years the Empire Rubber and Tire Company of Trenton, N. J., have been known for their ability to build extra long life into rubber goods of all kinds.

The Peerless Red Tube was their first tire product. For ten years the Peerless has been known as the longest-wearing tube on the market.

Then came the first red casing—the famous Empire Red—the tire you see on the finest cars.

And the same high-grade materials, the same individual skill, the same careful, honest workmanship go into every Empire tire product—gray as well as red.

This means that every Empire product lives up to the reputation that was made by Peerless Tubes and Empire Reds—a reputation for extra miles and lower cost per mile.

For besides their ability to put extra miles into rubber, the Empire Company have now shown that they can put extra miles in fabric.

Their new exclusive "equal-tension" process gets rid of the weak spots that cause 53% of the blow-outs.

Come to the Empire store and let us tell you about it. Let us show you what this extra mileage is, and what it means in dollars and cents to you.

The Empire Tire Dealer

TALES FROM A SAFE-DEPOSIT BOX

(Continued from Page 20)

"I had been wondering," said Mr. Cressy then, looking up, smiling suddenly, "if it would do to propose an idea that has just come to me."

"Go on," said Charlie's mother bluntly. "What is it?" And Charlie winked at me.

"I had been wondering, "said Mr. Cressy, "suppose we should get this money—suppose we should secure the limit of our wishes from this enterprise—how would each begin to enjoy it? It would be interesting to know what each one of us has dreamed. For that's what someone has said—Emerson, I think—we are what we dream.

"Come," he said when no one spoke, "I will challenge you—I will confess first. I will tell you frankly how it is with me. For me it would be my first desire to travel. I would see the Holy Land particularly. It would not alone be pleasure and education for me," he said in a lower voice, "but an avocation as well—I might hope, if all went well. A reinvestment, if you like, of my means in a close and familiar knowledge of Palestine.

"I have had in mind for a considerable time a course of lectures on this important subject, approaching it from an entirely new angle, which I think would fill a long-felt need upon the lecture platform."

He stopped for a moment, silent.

"And now," he went on gayly, "I have confessed. What would you do with your money, Miss Moshier, if it should come to you? Would you travel too?" he asked her when she didn't speak.

"Yes," Miss Moshier answered faintly from behind Charlie's mother.

"Where?"

"I think I'd go to Paris first," said the little dressmaker, and smiled quickly. And Mr. Cressy laughed.

"A pretty gay choice, Miss Moshier," he said, and shook his finger at her. "Pretty gay."

"That's it, I guess," said Miss Moshier, and laughed a little nervously. "That's just why."

"Anyway," she said, and adjusted the little ribbon at her neck, "you asked me and I told you."

"I don't blame you a bit," said Mr. Cressy. "I wouldn't mind seeing the capitals of Europe myself, Paris among them. And you," he asked Charlie's mother—"where would you go? Or would you travel?"

"Well, I don't know," said Charlie's mother doubtfully. "I always thought I would like to see Niagara."

"We wouldn't stop there," said Charlie, "not if I was aboard. We'd keep going."

"In the big red car," I said, getting humorous, "and a new suit of clothes for every day."

"You've mentioned it," said Charlie.

"And you," asked Mr. Cressy of me playfully—"what would you do?"

"I don't believe I'd travel," I said. For I had got started now. "No, I'll just stay at home and get married!"

"Well spoken!" said Mr. Cressy. And then they all laughed at me.

The butcher didn't say anything and nobody urged him. He sat by himself, staring ahead. And then the rest of us kept still, a little ashamed of letting ourselves loose. And the car droned up the hill in our silence.

I got off where Mr. Cressy did, and we walked a ways together.

"I certainly do hope," he said soberly, "it will come out as we wish—or some way approximating it," he added quickly. "For the entire thing seems too hopeful now to be all true. But, if it should not fulfill all our expectations, I certainly pray it does not entirely fail. These are all people of small means," said the minister of Zion's Chapel. "I am familiar with the circumstances of nearly all of them and know it will be a real disaster if it should actually fail—for many of them.

"Take Miss Moshier, for example! It might go hard with her if this enterprise did not eventuate—if it should actually fail. The money she put into this was a considerable part of her savings; what she had destined, I had always understood, as a fund to insure her entrance to an old ladies' home, when the time comes for that. And that would be soon," said the chapel minister. "She is now quite well along in years. And no longer in active demand as a dressmaker."

"And that man who sat by himself—that butcher?" I said, for I wondered especially about him.

"Much of his profits, I believe," said Mr. Cressy, "would go to meet his debts, at first at least. Indeed I have never understood how he secured the money for investment at all. For he is not a successful man. In fact," said Mr. Cressy, stopping before his house, "very few of those in this company are successful—as the world goes.

"No," he said, "I thought of it as we were speaking in the car to-night—of what we'd planned. In some ways it was almost pathetic."

I saw the shine of the street light on the shoulders of his black overcoat as he turned up the outside step to the double tenement house where he lived.

"Well," I said to myself, leaving him, "if it should go wrong it would be bad enough for me; but my end of it would be a pretty small part of the trouble."

That was one thing I had learned anyhow by this time—that there were plenty besides me exiled to that bare country of fifteen dollars a week.

"But I guess it will go now all right," I told myself. And I sent on my four hundred and fifty dollars the next day according to my agreement.

It was the second day after that meeting that I was in the bank, making my weekly deposit to my bank account—now practically empty; and I saw John Snaith from his place in the front window beckoning me.

"Well, how is it going with you at the store?" he asked me.

"Not very well," I said, and told him about my disappointment at the beginning of the year—about my fifteen dollars a week salary.

"That so?" said John Snaith slowly. "Too bad."

He waited, turning his unlighted cigar in his mouth.

"A thing came in here the other day," he said to me, "that made me think of you. It was a chance for a small business. It was an agency for a line of hardware specialties. I thought at the time of you."

"Yes!" I said, looking up quickly.

"They're getting through with the man they have, and they want somebody else that knows the trade. Most of the goods they send on consignment."

"Yes!" I said, my blood rising in my face.

"There ought to be a good thing in it. A good living in it in a year or two for a hustling boy. He might even get married some day on it," he said, while my face flushed crimson.

"Of course," he added, "you'd have to have something to put up for the renting of offices and things like that."

My excitement stopped again—cold.

"Let's see," he said: "how much did you have saved up the first of the year?"

"Five hundred dollars," I said automatically.

"Humph, well," he said; "with that to start with and what I might let you have—it might be done."

I leaned forward.

"I haven't got it any longer," I choked out.

"Haven't got it!"

"I put it all—I bought stock with it," I stammered.

"What stock?"

"American Telair," I said. "A new company. I don't know as you ever heard of it."

He looked at me.

"Well, yes, I've heard of it," he said slowly. "So you're in that!"

"Yes," said I, holding my breath.

"Well," he said at last. "That ends it, I guess, so far as this business is concerned."

My heart bumped down on my boot soles as I heard him.

"And I should say offhand," he continued, "as far as your five hundred dollars go too!"

"Ends it," I said when I got my voice. "What do you mean? Do you know anything against the company?"

"I know enough," said John Snaith. "I'd ought to. It's been peddled round enough. And I know this George Kenyon some, all I need to."

"Is he—is he crooked?" I managed to ask.

(Continued on Page 43)

"We saved the car and a ten-mile walk in our flimsy masquerade costumes—Thanks to the J-M."

Bought to save insurance—used to save the car

THE saving of 15 per cent. in insurance premiums is often sufficient to cover the cost of the extinguisher. But even without this feature, the purchase would prove a sound investment by the positive protection it gives—and by the sense of added security.

Fires choose their own time and place, often the worst possible for you—but you're adequately prepared if you equip your car with a

Johns-Manville Fire Extinguisher

—the *only* one-quart extinguisher discharged either by pumping or by air pressure previously pumped up. Deadly to all incipient fires, whether from gasoline, oil, grease, kerosene or electrical arcs.

The J-M Fire Extinguisher is approved and labeled by the Underwriters' Laboratories, Inc.

J-M Extinguisher Fluid—non-deteriorating and harmless to the skin, fabric or machinery—is the only liquid recommended and guaranteed for re-charging.

To the Trade: Ask the nearest J-M Branch for details—generous discounts, uniform and rigidly maintained regardless of size of order, coupled with a sales policy designed for your protection.

Price, in nickel or brass finish, $8.00, including bracket

Muscles of the 'Royal Cord' Tire

"Follow nature and you can't fail."

'Royal Cord' Tires are built on natural lines—on lines analogous to the human anatomy.

And following nature so closely, we know that we have built right.

* * * * *

The muscles of a cord tire are its layers of cords.

The muscles or cords of the *'Royal Cord' Tire* are built in layers into the anatomy of the tire just as muscles are placed in layers in the human anatomy.

Study, for example, the muscular structure of a human forearm. *(See illustration.)*

Note how the muscles are laid, not lengthwise—but diagonally in opposite directions.

Note also that the muscular structure is not made up of merely two layers of muscles, but of several.

* * * * *

Cord tire construction is of two kinds:

1—two layers of heavy cords laid diagonally in opposite directions;

2—many layers of many powerful little cords, the layers running alternately in opposite directions.

It is self-evident which of these two forms of cord tire construction follows the laws of nature.

* * * * *

The 'Royal Cord' Tire is made up of many layers of many powerful little cords, the layers running alternately in opposite directions.

And that is the principle upon which nature builds the muscular structure of man.

Having that natural construction, the *'Royal Cord' Tire* must necessarily have the same muscular resistance to stress and strain from all directions, which is the physical attribute of a man with well-developed muscles.

* * * * *

The 'Royal Cord' Tire being built on nature's lines,

—gives lowest mileage cost;

—gives marvellous resilience and flexibility;

—gives that service which has demonstrated its supremacy among cord tires.

A Tire for Every Need of Price and Use

(Continued from Page 41)

"Well," said John Snaith carefully, "he isn't in jail yet. But he's certainly shaved pretty close to the law sometimes. He has certainly done a lot of business round here on the strength of a seal-lined coat and a diamond scarfpin. And if any of his stocks have come out right so far, I haven't heard of it."

"But that professor," I said, more and more excited, "is he—is he crooked too? He is an inventor, isn't he—really?"

"Well, yes," said John Snaith; "so far as I know he's all right. Just somebody George Kenyon got ahold of somewhere and got under his thumb."

"Well, they have got this invention," I kept on arguing.

"Yes, I guess that part's right too."

"And they've got a contract to turn it over to the telephone company. I saw it," I said, getting back a little courage.

"So I heard," said John Snaith.

"And they'll pay big royalties."

"Will they?"

"Well, what is the matter with it then?" I cried. "This company will have to carry out its contract. And they've got all the money in the world, haven't they?"

"You didn't look to see when they begin paying under the contract, did you?" asked John Snaith, his cigar tilting up.

"No," I said. "I don't know as I did."

"Well, the next time you do that. And if you find anything definite, come round! I'll take this stock off your hands." And he started to turn away from me to his old desk.

"Look here," I said desperately, trying to keep his attention. "What do you mean? What do you know about this anyway?"

"Nothing in particular, except it's an old game," said John Snaith. "Peddling stock round that's going to be another telephone. Putting another miracle on the market, as everybody's been doing since the telephone started."

"But the contract," I said again. "Why would that big company make it, if they didn't want it?"

"Why wouldn't they," asked John Snaith, "if they don't have to pay for it until they use it?

"No," said John Snaith, starting to turn round for good, "I do know something about the thing. I looked it up once for someone. They've got another one of those half-baked miracles to sell—it won't quite work. A kind of half a big idea. These companies can afford to buy them and keep them until the other half comes along—if it ever does. And all there is to it," said Mr. Snaith, "is that George Kenyon came along, and ran across this thing, and saw what he could do with it—peddling it out to small people who had no experience."

"Well, it might be good then sometime," I said with a last flush of hope.

"Oh, yes," said John Snaith, turning back still further toward his desk, "maybe it will—about 1945. But that won't help us much just now—buying out this business we want."

He stopped talking then and looked at me. I suppose he saw the misery in my face.

"Who's in it with you anyway?" he said to me in a more human voice. "Who'd George get in this time?"

So I told him those I knew.

"Got your stock?" he said.

"Yes."

"Want to make it over to me?"

"Yes, sir," I said, like a miserable schoolboy.

"All right," he said. "Bring it over! I'll see what I can do." And he wheeled back to his old black-walnut desk. "But keep this to yourself," he said over his shoulder.

"Yes, sir," I said humbly, and went out.

The evening after that was the banquet at the Hotel Orgillon, upstairs at eight o'clock. At seven-forty-five the stockholders of the American Telair Company began arriving in the private reception room for their celebration.

Mr. Kenyon, in a flowered waistcoat and an evening dress suit, smooth as the skin upon an apple, came up and met me warmly when I came. And Charlie Seavers followed after him, in a brand new evening suit with a deep-set slender waistline, perfect in every detail.

"Some party," said Charlie, removing an imaginary thread from my coat collar with his thin fingers.

And I went around and shook hands with the rest of them, all arrayed for the occasion. The professor and Mr. Cressy had on frock coats, the rest of the men their sack suits. The women were in black mostly, with high necks. Miss Moshier, the little dressmaker, alone had paid tribute to the event and the Hotel Orgillon with a V cut down below the collar line—in a stiff, old-fashioned, garnet silk. She had a black ribbon round her thin neck, and her face looked still more old and puckered over it.

We stood round the walls for a while, and Mr. Kenyon finally got us in to dinner—the waiters watching critically. I took out Miss Moshier myself, her head reaching up to between my elbow and my shoulder, her hand shaking a little on my arm as we went in. I didn't pay much attention to her. I was thinking of myself mostly and of my lost five hundred dollars and my lost opportunity—since the day before—and about that sleek rascal that was carrying out the farce that we were playing. I wouldn't have come if John Snaith had not told me to. I was too absent-minded and anxious to pay much attention to my partner. But I did hear her gasp when the doors opened into the white dining room. She looked round at everything in silence, like a little, old, hungry child at a baker's window.

"It is certainly elegant," remarked Charlie Seavers' mother across me. "Isn't it, Miss Moshier?"

"It's wonderful," said the little dressmaker, and stopped, watching the centerpiece of big roses on the table.

"This is the way we shall dine every evening when the dividends begin to come in," remarked Mr. Cressy to us, spreading his napkin.

I forgot my own troubles a little, listening to them, wondering what would happen.

"This is certainly the life," called Charlie Seavers to me from across the table, sitting slim and immaculate with a white camellia in his lapel.

And they brought in the oysters—the cocktails standing untroubled by the plates mostly. Then unexpectedly a waiter came and whispered to Mr. Kenyon at the head of the table and he went out.

"Go right ahead, folks," he said. "I'll be right back."

But he wasn't. He stayed there quite a while.

"Shall we go on?" asked Mr. Cressy of the professor, who sat at the right of Mr. Kenyon's empty chair, as noisy as the Skeleton in Armor. And when the professor didn't know, they sent out the waiter to find out.

"First-class food," I heard the butcher say. "They buy everything A Number One here." He had waked up quite a little.

Then the waiter came back and said that Mr. Kenyon said to go ahead and he would be in later.

He did come—that next course. But it was almost half an hour afterward, with the waiting.

I looked up and sat up. For with him came in John Snaith, in his old pepper-and-salt sack suit! The waiter made a place for him at the head of the table opposite the professor.

"Why this is a surprise," whispered Mr. Cressy to Charlie Seavers' mother. "John Snaith!"

"Who?" she asked.

"Mr. Snaith, the banker!"

"Good evening, Mr. Snaith," said Mr. Cressy, catching his eye and getting up. "This is indeed a good omen. I hope it means you are one of us. I hope so, for anything John Snaith's name is in must necessarily spell success from its inception." And he laughed a little loudly.

"You don't know me, neighbor," said John Snaith. "When I come to publish the secret history of my investments you'll think different." And he sat down.

We talked mostly among ourselves after that. They didn't say much, I noticed, at the head of the table, even Mr. Kenyon. And the old professor, of course, sat across from John Snaith, still as absent-minded as ever.

Mr. Kenyon didn't laugh at all now. He sat and ate and drank heavily and directed the waiters. I sat and waited anxiously, the only one with any real suspicion about the thing.

Then, finally, after the dessert, John Snaith got up on his feet.

"I'm not much on public speaking anyway," he said in a dry, level voice. "And already I have disturbed your fine dinner to-night by taking Mr. Kenyon away from you. So I won't say any more than I have to. The fact of the matter is that Mr. Kenyon and I were unavoidably detained, talking over a matter interesting to

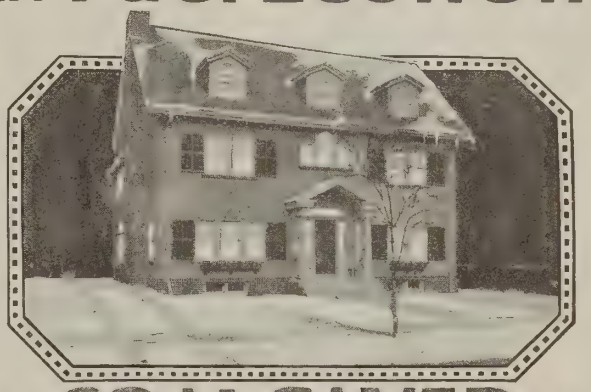
Healthful Heat
with Fuel Economy

11% Annual Dividends



In Fuel Saving

JEWEL COAL SAVER FURNACE

The only sort of heating system that supplies a self-diffusing, fresh, and normally-humid heat is the warm air system. That is why physicians and health authorities such as Dr. W. A. Evans, of Chicago, endorse warm air heating as the healthful system.

The Jewel Coal-Saver Furnace has been perfected, at the world's greatest stove plant, in order that the most healthful heat might be at the same time the most economical. This has been accomplished by the invention of the Jewel Triple Economizing Features. Over 62,000 homes in the United States are today heated by Jewel Furnaces.

Let us send you Free our Eye-Opening Book

This book tells things about home heating that you ought to know and explains the features of the Jewel Coal-Saver Furnace that makes it pay 11% Annual Dividends in fuel saved. Write for the book at once. Our service department gives aid in the planning of home-heating systems. We manufacture furnaces of all sizes and types, including the pipeless or one-register furnace.

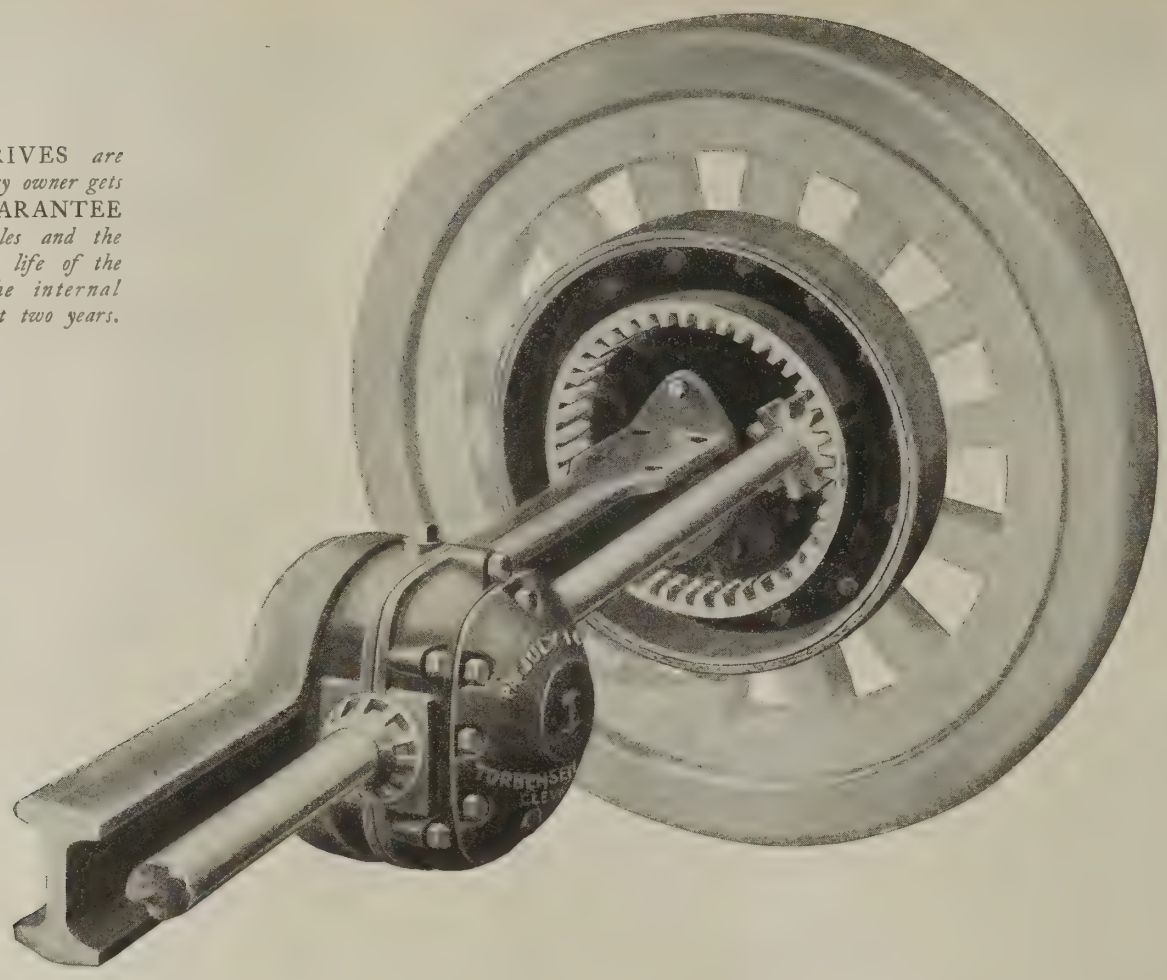
TORBENSEN DRIVES *are made to* LAST. *Every owner gets a* GOLD BOND GUARANTEE *that the I-beam axles and the spindles will live the life of the truck; and that the internal gears will last at least two years.*



It is the rear axle *DRIVE* that makes a truck a *truck!*

FOUR-FIFTHS of the whole truck load hammers the rear axle constantly.

Every road shock, every side-sway, multiplies this tremendous weight—tries *that* rear axle to the limit.

Pleasure-car axles *can't* stand such treatment. That is why *old-time* trucks, with *pleasure-car* axles, were failures. It was up to the *rear axle* and it *fell down.*

So the truck business lagged behind in development till a rear axle was designed which took into account *all* the rending forces that trucks must meet.

TORBENSEN Rear Axle Drives are *truck* drives. A dead *I-Beam* carries *all* the load. It naturally has great overload capacity.

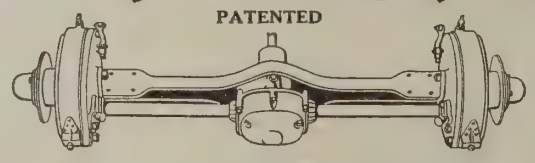
A differential and a jack shaft transmit *all* the power and apply it near the *rim* of the wheel. They carry *no* load whatever.

These two units, held rigidly as a single mechanism in practically perfect permanent alignment, form the TORBENSEN Drive.

This is *how* TORBENSEN solved the truck problem. This is *why* TORBENSEN became the largest builder of internal-gear truck axles. This is *why*—in the last two years—the internal gear truck axle has seen a development proportionately greater than that of any other type of drive. This is *why* TORBENSEN is now the world's largest producer of truck axles of any kind.

TORBENSEN-DRIVE

PATENTED



Internal Gear Axle

The Torbensen Axle Company is the largest builder of Truck Axles in the World

(Concluded from Page 43)

everybody here, about the finances of your company."

"A financial conference!" said Mr. Cressy, nodding deeply.

"You see your company's money is all on deposit in my bank," explained John Snaith. "That's one reason I come into it, besides stock!"

And I saw Mr. Kenyon give one long black look at me, under his eyelids.

"Well, to come to the point," the old man went along, "the upshot of it all is that Mr. Kenyon's asked me to announce to you the payment of the first dividend of your company."

"A dividend!" called Charlie Seavers quickly. "How much?"

Everybody sat straight, listening, as the speaker stopped.

"Good! Good!" said Mr. Cressy, thumping the table with his spoonhandle.

"He has decided," went on John Snaith, "to declare at once a dividend of one hundred per cent, from the assets now in the bank."

"One hundred per cent!" said someone. And we all sat motionless, even Mr. Cressy, the spokesman for the investors. I looked at the head of the table, at the professor. He sat up, his mouth opened, and I thought for a moment he was stricken into speech. But then he looked right down again, as if after all it didn't matter.

"Yes," said the speaker, "we talked it over and we looked at it from all sides, and Mr. Kenyon came to the conclusion that the stock which he would hold in this company would be sufficient for his work of forming it for the present. So he made the proposal that the company turn the money in the treasury back to its contributors—all he had in his hands as treasurer. And so he spoke for this dividend of one hundred per cent."

The little dressmaker beside me leaned forward, her eyes shining, half the wrinkles and puckers smoothed out of her face.

"Already!" I heard her whisper.

"His idea being," said John Snaith, "that under the circumstances he can postpone the payments to himself until the royalties of the company begin to come in. They'll pay him when they do and meet your other expenses, if there are any expenses. And meanwhile he'll see to paying the expenses as they come—the way he has up to now."

"Why, this ——" cried Mr. Cressy, starting up restlessly, and sitting back again as John Snaith went on speaking:

"It seemed to us that there was no time better for a thing like that than now—just this banquet, this celebration we're having now—so he and I worked out this scheme, if you approve of it. It's this: Mr. Kenyon offers to postpone his contract for cash settlement for his promotion of the company and, as treasurer, he will sign over to me a check for the entire amount of the dividends, for which he has funds now lying in my bank.

"Have I got that right, Mr. Kenyon?" asked John Snaith.

"Yes," said Mr. Kenyon in a voice so thick I scarcely understood it. He looked very red and hot. A great blotch of cigar ashes lay unnoticed on his flowered waistcoat.

"Why, this ——" started Mr. Cressy again, and stopped once more.

"I want to get it right," said John Snaith, "exactly. And that's it, I think. Mr. Kenyon will make out his check to me and I will give my personal check to each of you, if you will each one state the amount of stock you own. That is, if this is satisfactory to you."

"Satisfactory!" said Charlie Seavers to the tablecloth. "John Snaith's check! Good evening!"

"This, you understand," John Snaith was saying, "is Mr. Kenyon's own idea, his choice of several ideas. And in addition," said John Snaith, "he takes pleasure in tendering you this banquet!"

"Why this, Mister Chairman, is generosity itself!" said Mr. Cressy, standing up and looking toward Mr. Kenyon at the head of the table. Mr. Kenyon sat perfectly still where he was, sunk down deep in his chair. But his red face suddenly became a deep maroon.

"Exactly so," said John Snaith, checking Mr. Cressy.

"But, of course," he went along, "you've got to vote it first; you've got to go through the formalities."

Then we sat there while the necessary motions had been gone through at the head of the table. And after that Mr. Cressy sat and directed matters actively, while John Snaith figured out the thing and wrote the names of the stockholders on his checks.

Mr. Kenyon sat silent, slumped down, smoking, except that one time when he signed his name.

All we other men sat speechless, watching the proceeding as it went on. The butcher in particular, I saw once or twice, never moved, his prominent eyes fixed on that one fixed spot—of John Snaith signing checks. But the women's attention wavered now and then.

"Did you notice this table linen?" Charlie Seavers' mother asked Miss Moshier across me. I had seen her fingering it. "It's wonderful."

"It's all wonderful," said Miss Moshier, looking at the roses in the centerpiece. And once or twice she reached out and rearranged them with her quick dressmaker's fingers, delicately, as if they were frail living things.

It took quite a little time, but after a while we had our checks, each one of us. I shall never forget the first feeling of mine in my hand. After that awhile, I saw John Snaith looking down at me and knew he wanted me to meet him outside. The others still lingered at the table. As John Snaith got up and strolled out, Mr. Cressy was starting to say a little something about the first dividend of the Telair as an augury for the future.

I followed Mr. Snaith to the next room.

"By thunder!" he said, stopping just a minute by the door. "I believe he's giving George a vote of thanks." And his cigar stood still in the corner of his mouth as he watched them. A grim grin twitched at the upper corner of his gray whisker. "Come on," he said then. "Don't let's disturb them. Let them enjoy themselves as long as they can. They don't banquet every night."

We could hear Mr. Cressy's voice thanking Mr. Kenyon as we started down the elevator.

"I don't know, Mr. Snaith," I said awkwardly, "what to say."

"Never mind saying anything," he answered me.

As we came into the lobby he stopped and spoke to a man there. I looked for a minute before I saw who it was. It was a police officer I knew by sight, dressed in citizen's clothes. John Snaith spoke a few words to him, and he went on out of the hotel ahead of us. And after a little while we followed.

"I don't know," said John Snaith reflectively, "whether I did the right thing. I don't know but what I am compounding a felony."

"A felony!" I said after him.

"Yes," he answered me, "in that other thing—that Tulsa Oil business he had before this one."

"Oh," I said, understanding the presence of the police officer.

"But I figured finally," he said, "the best thing, after all, would be to get at what you knew was there—at what you could lay your hands on for you and your partners," said John Snaith, looking up at me, his sharp eyes twinkling, "in this Telair. What do you think?"

I started to say something, I don't know what. But John Snaith didn't pay much attention.

"Always the same," he went on again, "year after year. But I never do get used to them."

And I waited for him to go on.

"I always hate to see them—these devilish miracle peddlers round town, hunting boys and old maids."

I walked along with him—silent.

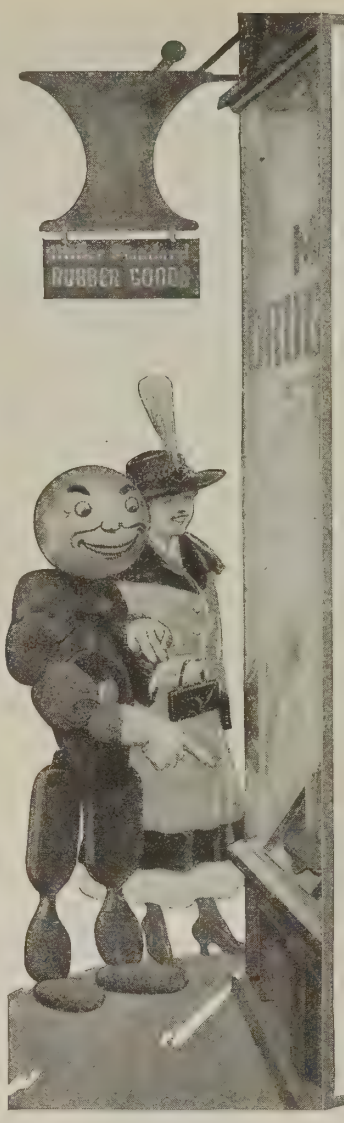
"What I got you out for," said John Snaith as his street car came along, "was to ask you to step round to the bank in the morning.

"Maybe," he added, "we can do something yet about that thing I was talking to you about—that agency for you."

And Mr. Snaith went out into the street for his car.

I stood there a minute after he was gone and looked up at the light of the window in the side of the hotel, where Mr. Kenyon and the little people, my fellow investors in Telair, were still lingering at their banquet. Then I put my hand in my vest pocket again and felt the rough edge of John Snaith's check; and I walked on home with it, whistling.

Editor's Note—This is the second of a series of stories by Mr. Turner. The third will appear in an early issue.



What You Really Buy—

WHEN you buy a hot water bottle or a pair of household gloves—you really buy the service they will give you. That's the way we look at it, and that's why our first concern as manufacturers is to make every article included in

Miller Standard RUBBER GOODS

Supreme in Serviceability

In the Miller Hot Water Bottles the exclusive C-Kure-Nek and molded in-one-piece seamless construction which can never leak, accomplishes this. In Miller Rubber Sponges an exclusive process produces a sponge in which there is no semi-solid core, that will not slough off and which can be completely sterilized. In Miller Sanitate Diapers and Sanitary Aprons the use of pure gum without cloth backing gives softness and complete flexibility and prevents cracking. A Miller Ice Cap has two tape slots at each end which prevent the cap from slipping. Every Miller article has something different that makes for better, more complete service.

Buy Miller Standard Rubber Goods at the drug store that shows the Miller Agency sign.

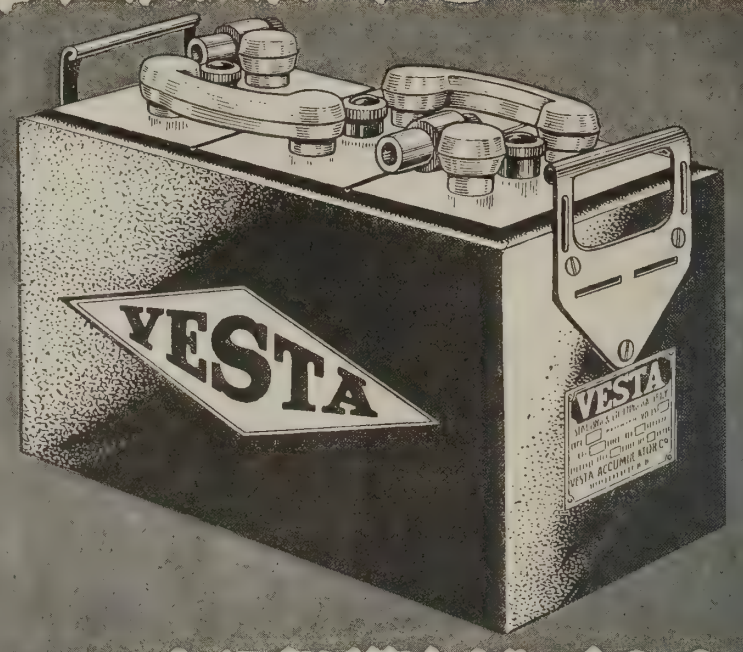
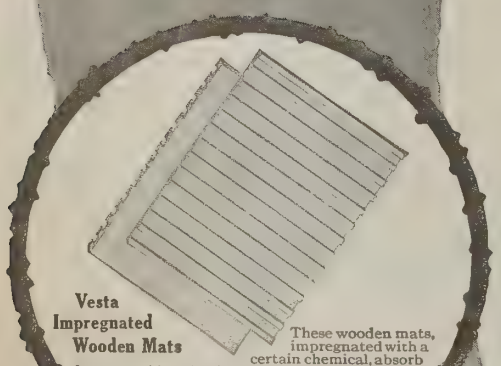
Batteries are Different!



Vesta Indestructible Isolator

This apparently simple device positively locks the plates apart and prevents the short circuits caused by the plates touching each other, in ordinary batteries. It adds life to every Vesta Storage Battery. The battery acid has no effect whatever on the Indestructible Isolator.



Vesta Impregnated Wooden Mats

These wooden mats, impregnated with a certain chemical, absorb battery acids as freely as ordinary mats and form a perfect path for the current. Yet they absolutely prevent the passage of metallic lead through them (commonly called "treeing") thus eliminating another prevalent cause of deterioration.

Why VESTA is the Most Wonderful Battery in the World

Three great Vesta triumphs—the most important starting battery improvements in the last twenty years—make Vesta the most wonderful starting and lighting battery in the world.

These three exclusive, patented Vesta discoveries give the Vesta *double life*. They prevent the various forms of short circuits, the most common cause of battery troubles. They endow the Vesta with greater efficiency, service, economy and satisfaction. Thus is the Vesta different from all other batteries.

The Three Great Triumphs

Vesta scored the first great triumph with *Vesta Indestructible Isolator*, an ingenious device, which locks the plates apart and prevents short circuits.

Next Vesta announced a second remarkable feature—*Vesta Impregnated Wooden Mats*, which prevent "treeing" and its disastrous consequences.

Now comes Vesta's third great discovery—the use of *Titanium*, a rare mineral which greatly prolongs the life of the battery. *Titanium* enters into the lead plates, hardening them and giving them longer life. It also remains in the battery solution, precipitating minerals and impurities in solution and adding vastly to the efficiency of the battery.

No Other Battery Can Use Them

These three remarkable improvements are found only in the Vesta. They are all covered by U. S. Basic Patents belonging solely to the Vesta Accumulator Company, one of the oldest automobile battery concerns in the United States. Yet with all these improvements, which mean *double value and greater economy*, Vesta costs no more.

MOTORISTS: Before you buy a new battery or turn in your old one, write for our booklet explaining Vesta superiority.

placed. Perhaps, though, this is as it should be. When a grown-up human being of white blood, native born, living under a democratic form of government in a country dedicated to the principle that all men are created free and equal, accepts without an argument the dictum which sets him apart as a member of the Lower Classes, it probably constitutes good and sufficient evidence that finally he has landed exactly where he belongs. By his acquiescence he has helped to make his own nest. He should be happy lying in it. And if he be satisfied it ill becomes any among the rest of us to seek to make him discontented with his humble lot; he might turn disrespectful toward his betters. Let us, therefore, pay no attention to the slight disturbances in yon cemeteries caused by Thomas Jefferson, Andy Jackson and Jerry Simpson, of Kansas, turning over in their respective graves.

Only here the other day appeared a squib in the papers touching on a new activity upon the part of sundry persons residing within the sacred and hallowed precincts of Upper Classdom. It came to light first in New York; mostly, such things are spawned close to the congenial Manhattan shore. It was deemed worthy of being given wider circulation by the press associations, and so in one shape or another was carried by the daily press generally. Publication of it did not start a riot; did not raise a guffaw; did not seem to warrant any general outburst of editorial comment. Apparently it was taken much as a matter of course, as a proper part of the day's news. In case you missed it, reader, it is reproduced in its form as a press dispatch. It was quite short. It was written seriously, without intent to be facetious. It was as follows:

"A society magazine, to be called the Chronicle, exclusively for society, with its contributions confined to society and its subscription list to society people, with a society woman as its managing editor, will make its first appearance. It will carry no advertisements and no illustrations. The intention is to make it a bit of a 'highbrow' publication. . . . The price will be $1 a copy."

Just take that home with you, Mr. Average Citizen, and try it on your concertina. But do not undertake to purchase a copy of the publication when it has been printed. That, for you, would be both improper and impious.

A Salon for Americanization

A little earlier in the year word was given forth to a palpitant planet that the wife of The Richest Young Man in America—if we capitalize these words when we speak them why shouldn't we do likewise when we write them?—had inaugurated a series of at-homes with the benign design of fostering "Americanization," whatever that may mean. One gathered that the scope of the plan included, among other things, the opening of a salon where the very wealthy from the palaces might meet with the very otherwise from the tenements, each group to gather helpful views from the other, meeting much as creatures from two far-distant planets might convene together, with intent on the part of either delegation to study the customs, the habits and the peculiarities of the dwellers in a separate and distinct world. One also gathered from the newspaper accounts of the experimental gathering that the attendance was confined almost exclusively to members of the so-called gentler sex. Certainly the husbands of the ladies from the tenement districts were not present in noticeable numbers. The salon to which they naturally would give their patronage on their afternoons off—as who could blame them!—would be a salon that was spelled with more than one *o*.

In these matters the principal point to be pondered by one who pauses occasionally to wonder whither we are drifting is not that the excessively wealthy should take themselves thus seriously, but that so many of the rest of us should be willing to take them with the same amount of seriousness. Heretofore the unduly rich had the ability to amuse everybody except themselves. They constituted our national free vaudeville, our outside ballyhoo. They were volunteer entertainers who worked for nothing and footed all the bills, never apparently getting very much joy out of the job for personal consumption, but providing unlimited entertainment to the multitude. We expected them to furnish us with what a dentist so often finds in a patient's set of teeth—plenty of shiny gold fillings in front, but behind an expanse of exposed nerve and a decayed spot here and there.

It is perhaps a sign of the times, as we get farther and farther away from the days of our earlier simplicity, that we should acquire more and constantly more of a respectfully worshipful regard for the human custodians of money in bulk. To some this may be a good sign, to others a bad one. One assumes that if one were a socialist one might draw a great lesson from the circumstance. Being no socialist, but merely an innocent bystander, one does not presume to make any deductions in the premises. But how can we blame wealth for being so arrogant when there is so much of reverence for it to feed itself fat upon?

The Sanest Idea of the Century

The chief fact offered in support of the claim that the older Americanism is passing into eclipse and that a newer one is coming forth into the sunshine of the current day is to be found in the instinct which expresses itself, in so many directions, for organization. It is an instinct which has a card index for its dam and a tabulating machine for its sire. It is starting at opposite extremes of life and working toward the center, starting from the bottom and working upward, starting from the top and working downward. At the bottom there is, for a conspicuous example, the Boy Scout movement. At the top there is the steadily widening movement to fix the adult's status by sumptuary statute and enactment, by legislative paternalism, by taxing him for the things he accomplishes and penalizing him for the things he fails to accomplish; by jamming the square peg into the round hole and making the peg to stay there, whether it wants to or not.

An overwhelming majority of us agree that a finer institution for the growing youth than the Boy Scout movement was never devised. How can anyone consider the proven results without indorsing that view? When I was a small boy most of the things which a small boy's constant craving for adventure and excitement led him to undertake were held to be wrong; anyway, most of them were forbidden him. He did them by stealth and by the practice of deceit, with the sure prospect of punishment ahead of him if he were caught—unless he could lie his way out of his predicament. His restlessness found a vent, therefore, in the doing of mischievous acts, and very frequently harmful and hurtful and cruel acts, because there is nothing in Nature quite so thoughtlessly and innocently cruel as the small boy in his natural uncurbed state.

The founders of the Boy Scout movement caught at the instinct of the boy to play at being something else than what he is, and at his aptitude for imitation of his elders, and at his love for pomp and show—caught all these threads up and wove them together in a fabric of sanity. They capitalized his yearning to wear a uniform and to march in ranks and, best of all, they showed him he could have a good time—a better time than his father at his age ever had—and yet could perform manly and decent and healthful deeds while having his fun. You can't beat a scheme like that one; it is doubtful whether you can greatly improve upon it. Personally, I am inclined to believe it to be the very finest and sanest idea that this century has to date produced.

Incidentally, Boy Scoutdom is implanting in the boy's mind, at the very seedtime of his life, the germs of discipline, the willingness to take orders and the ability to give them. It is educating him for authority and for an appreciation of the needs of organization; it is drilling into him an understanding of what duty means when it is systematized, and what responsibility means when it is focused, and what initiative means when it is controlled and directed toward a good end.

On top of this, at the next upward stage in the scale of juvenile age, it would appear that we are shortly to have compulsory military training for the youth who stands at the lower edge of manhood. And that—quoting the Colonel—is, in the opinion of a

(Continued on Page 50)

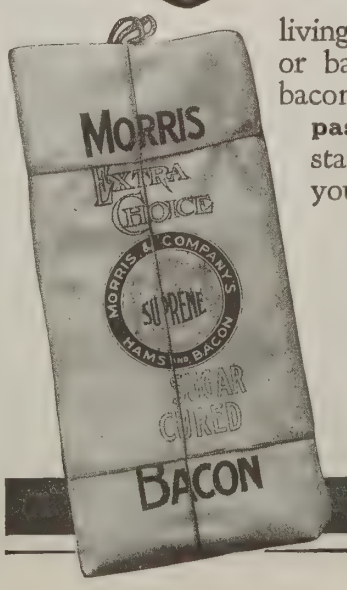
Supreme Ham for Easter Breakfast

EASTER MORNING! The scurrying pitpat of little feet. The search for "what the rabbit brought." The promising rattle of kitchen things—and then—*incense!* Upstairs comes a whiff that means more to hungry folks than Arabia's precious spices—the tantalizing aroma of *ham a-frying.*

Supreme Ham—the gods could ask no more! Dress double-quick and down to breakfast. There it splutters on the platter—thick, juicy slices—with Supreme Eggs all white and gold. They are sizzling, too. A sure-enough feast!

MORRIS TESTED FOODS

Keep the holidays—respect their customs. That's part of the romance of living. Easter morning means ham and eggs or bacon and eggs. And *best* ham and *best* bacon mean Morris Supreme Products. **They pass the Morris Supreme Test**—a real quality standard. Dealers who care most to serve you best sell Morris Tested Foods.



Write for your copy of the new Morris Cook Book—"The Supreme Test"—with scores of new and many time-tried recipes. Address:

Two minds with but a single thought –

Under the evening lamp, in the hour of quiet contemplation, when hopes and aspirations take possession of the mind, the uppermost thought in thousands upon thousands of homes is—the automobile.

As a convenience, as a means to health and recreation, nothing can compare with the family car.

Every indication points to a demand very much in excess of the possible supply of automobiles this year.

We are prepared.

This year we apply the economies of vast production for the first time to a *complete* line of automobiles—an end toward which we have been working for eight years.

Light Fours, Big Fours, Light Sixes and Willys-Knights, including the marvelous Willys-Knight Eight, are built and sold with

—*one* executive organization,
—*one* factory management,
—*one* purchasing department,
—*one* sales force,
—*one* group of dealers.

All general expense is now distributed over many models instead of a few.

Greater values than ever before are now possible in the low-priced field.

New values are thus established in the high-priced field—in fact, this Overland accomplishment brings *moderate prices* to the high-priced field.

There is now an Overland or Willys-Knight for every class of buyer.

Body types—all brand new—include

—roadsters, two and three-passenger,
—Country Club, a four-passenger sport model,
—touring cars, five and seven-passenger,
—coupés, three and four-passenger,
—Sedans, five and seven-passenger,
—and a luxurious limousine.

Every one of these beautiful cars is a better car—better in appearance, in performance and in riding comfort.

One of them is the car of your dream under the evening lamp.

See these cars now. Get a car yourself this spring.

In convenience, in health, in pleasure, no investment will repay you and all your family so richly.

Spring is at hand with all its wealth of outdoors. Drive your own car.

Go to the Willys-Overland dealer—pick it out—ride in it—drive it—now.

Every indication is that there will not be enough cars this spring.

large number of us, a perfectly bully and an absolutely corking idea—not alone because out of it may come the salvation and the preservation of the nation in time of actual warfare, by virtue of the creation of a potential army, millions strong, whose members should be better citizens for being soldiers and better soldiers for being citizens, but also because it should make for bodily and mental betterment, for the disciplining of the mass into a people having a knowledge of the value of laws, for schooling the individual to obey those laws, and finally, for molding all classes of men into a purer democracy by giving to them the feeling of companionship and the realization that individual intelligence and individual effort, rightfully directed, hold out promise of advancement to every man enrolled in the ranks, regardless of his wealth or his position.

Nevertheless, in both of these forces—in the Boy Scout movement and in the demand for universal military training—may be seen quite plainly the inevitable outcomes of the impulses for the focalizing of authority in a few hands, and the centralizing of moral and physical elements.

At the top of the economic ladder, and near the top, the trend toward organization at the moment mainly displays itself in the governmental effort to curb the money-getting impulse of the well-to-do individual by taxing him right out of his union suit. A few years back he squawked with poignant distress at the prospect of being required to pay over to his Uncle Sam one per cent of his income, above a certain figure, seeing that already he was being mulcted by precinct, by school district, by poll assessment, by town and county and by state; and in addition was contributing to the upkeep of the national institution through the medium of the indirect forms of taxation—import charges, and such like—disguised in various forms, but all of them taking nicks out of every dollar that he could sequestrate from the channels of trade into his own pocket.

Moreover, in those times he had not thoroughly accustomed himself to the high cost of living, which, as may have been noted, soars ever higher but never gets any lower. But he has learned his lesson; he has been chastened and subdued. On his last year's income, with scarcely a murmur of protest, he paid an income tax of two per cent above the specified sum, instead of one as theretofore, and on top of that paid also a supertax on his special profits, if haply he had collected any special profits from any traceable source. What burdens this year may bind upon his shoulders Providence and Congress alone know, and Congress is not sufficiently in the confidence of Providence to permit of an approximate forecast at this time.

Is Life Worth the H. C. of L.?

Having revised our plan of living, next we must needs revise some of our wise saws and some of our dependable proverbs, because it is quite apparent the axioms of yore do not express the situation: Take care of the pennies and Uncle Sam will take the dollars. Many a nickel makes a fat tax return. No taxation without confiscation. What goes up is bound to stay up. Is life worth the H. C. of L.? Ten mills make one cent, ten cents make one dime, ten dimes make one dollar—that was the old style of computation of our coinage. To follow that formula now would be in the nature of decimalpractice. Ten mills still make one cent and ten cents continue to make one dime, it is true, and once upon a time a dime was a handy coin. It would buy something and it was useful for tipping purposes. Now a dime is not even a tip: it's an insult. And a dollar looks like thirty cents—which may sound slangy, but is not so intended. The congregation will kindly rise and sing the new national hymn: Blest Be the Tithe That Binds!

All joking aside, isn't it likewise true that the new system of living makes the average American readier than he once was to intrust the correction of popular evils and privileged abuses to special commissions, to legislative investigators, to charitable societies, to reform propagandas, and most of all to specially ordained boards which are the offshoots of the central government and are, therefore, answerable to the parent body rather than to the citizens at large? Aren't we, more and more each day, losing the faculty to reason out as individuals the causes behind unpopular or unjust conditions, and along with that faculty losing also the instinct to seek out the remedy at popular meetings and to enforce it at the polls? One merely rises to a point of order and asks the questions, leaving it for wiser minds to answer them.

National prohibition, in some form or other, appears to be headed this way out of the South and the West. Universal suffrage for women, either by a sweeping national enactment or by separate but harmonious concert of all the states, is a reasonably certain outcome of the present country-wide agitation. The taking-over of all or nearly all the great public utilities by the Washington Government is not an impossible contingency for the future. It not only is not impossible, but it is reasonably probable. So the genius for centralization grows stronger and greedier for dominance day by day. Some visionaries even dream of the day when we may have a blanket divorce law to cover the entire land, instead of the present patchwork creation pieced up by the separate states; but, of course, before that comes to pass we may look for most spirited protest from the already large and rapidly increasing group who are advocates of the proposition that marriage is not a contract, but an option.

Nero's Favorite Indoor Sport

For some centuries past there has been an inclination in divers quarters to blame the late Emperor Nero for the procedures employed by him in solving his matrimonial problems. Considering the limitations which bound him, and taking into consideration our own views upon this subject, are we not just a trifle unfair to the memory of the deceased? Nero had his good points as well as his bad ones. He was the Original Tired Business Man; by all accounts he was the idol of the Old Line Republicans of Rome, and a steadfast conservative. Like many another married man before and since, he had certain relatives by marriage whom he could spare, and in this situation he showed that he had the courage of his convictions—he just naturally up and spared 'em. Sparing them was Nero's favorite indoor sport. His method was untidy, perhaps—indeed, it may have verged upon the mussy—but it was the only way he understood for restoring comparative peace to the fireside. He "done the best he knowed how." And we of this age, who by virtue of the most accommodating and elastic divorce laws imaginable have been enabled to trade in our marital misfits and our domestic cast-offs at the secondhand matrimonial parlor in Reno or at the official ladies' exchange in Sioux Falls—we blame Nero for adopting the expedient of the moment. I repeat, is this quite fair?

But one digresses. Let us get back to our subject, which was the state of the nation.

In the present condition some strange paradoxes are to be discerned. While woman battles for the right to vote and for a fuller power of expression generally, there has never been a time when custom, which is the mightiest of laws, granted her so much liberty in certain directions. And similarly, while men passively accept legal enactments plainly devised with a view to curbing the individual faculty for exercising the individual will, elsewhere—and notably in the social and the conversational and the sartorial realms—they are free to gambol with an abandon undreamed of by the generation behind them. A good many of the states, by local option laws or by prohibition—which is so called because it isn't—undertake to deny to their citizens indulgence in intoxicating and stimulating compounds; meanwhile in the larger cities, at least, respectable men and women may in public or in private drink alcoholic beverages and use tobacco without invoking any adverse criticism whatsoever. A few years ago we marveled sometimes that so many women seemed to take so naturally to the cigarette-smoking habit. We should have known better than to have marveled thus. A little thought upon the subject should have told us that the impulse was very possibly hereditary. There are a great horde of us whose grandmothers knew a lot about stoking a cob-pipe.

These days men and women may openly and without impropriety discuss subjects relating to sex and the sex ramifications which their immediate forbears hardly dared to think of privately. In almost any mixed assemblage one may hear things said which our fathers and mothers fifty years ago could not have heard without blushing clear down to their toenails; and yet one

dares to assert that as a race we are just as clean-minded and have just as much regard for chastity among women and honor among men as those of the preceding generation ever had.

In the garments worn by women more latitude is allowed than formerly, if less of longitude. If you doubt the truth of this, consult the official forecasts on next summer's styles. Man also is permitted to indulge his sartorial idiosyncrasies without antagonizing public opinion to any noticeable extent. Man, very often, is fearfully and wonderfully made up. Recently I happened upon the following gem in a department—devoted to masculine fashions—of a publication having a wide metropolitan circulation:

"Time was when all the grace of a D'Artagnan could not carry off the gawky, lubberly bathing suit of the period. One might as well have tried to look a hero in a nightshirt or preach temperance with a red nose.

"To-day a man may be as well turned out for the swim as for the street, and cut just as personable a figure from cap to sandals.

"To be sure, dandiacal overdressing has no place on the beach, and the gulf between fashion and foppery is very like that which sunders 'gourmet' from 'gourmand'—there's a difference in the end.

"The swimming cap, illustrated here, is navy-blue worsted or merino, with a winged foot, the familiar emblem of the N. Y. A. C., embroidered on the front in the red-and-white club colors.

"Knitted caps, unlike rubber, do not keep the hair from getting wet, but they do keep it out of the eyes and fend off sunburn from the thinly thatched poll.

"From the French-Italian Riviera comes a swimmer's rubber mask—with cut-outs for eyes and nose—which is supposed to guard the face from turning red as a brandied cherry or brown as a burned loaf. The idea is so fantastic that it sends one into gales of Gargantuan mirth."

Are we or are we not being permitted to go the limit, brethren, in the matter of the clothes we wear?

So then, while legally we are curbing ourselves and permitting ourselves to be curbed by our legislators—which comes to the same thing—socially we are broadening. But as the old, comfortable, disorderly, slack-ended system of living and governing and being governed fades away and on its site is erected the newer, stiffer, harder, highly taxed, highly specialized structure, those among us who love old ideals and would cling to them may be comforted by a certain fact, and that fact is this: Amid the swirl and swing of customs and of rules, one institution yet rears itself, immutable and unchangeable, like a granite peak above a restless sea. I started to say like a lighthouse on an uncharted shore, but upon second thought decided to withdraw the comparison as unsuitable, since the main function of a lighthouse, as I understand it, is to cast light from time to time.

The thing which refuses to change—the one bulwark of our civilization which declines to conform itself to modern needs and modern conditions and modern transformations—is the method of administering and interpreting the civil and the criminal laws. The surgeon who dared practice his profession by the ethics and the standards of a hundred years ago, or even of fifty years ago, would be prosecuted, most likely, for malpractice; the business man who endeavored to carry on his business as his grandfather before him carried it on would go briskly into bankruptcy; the editor who ran his newspaper the way they ran newspapers when Horace Greeley and George D. Prentice were alive wouldn't run it any longer than it took for the sheriff to catch up with him; but the lawyer hobbles along in his rusty shackles, clanking the leg-irons of ancient precedent, and violently opposing the introduction of labor-saving, time-conserving improvements into his trade, because such steps would distress Coke, and possibly give pain to Littleton, and mayhap cause Blackstone peevishly to toss about beneath his tombstone. Counsel for the other side still may browbeat the citizen on the witness stand as though the latter were a malefactor at the bar, doing it with the full approval of His Honor upon the bench, not because there is any fairness in it, but because such always has been the rule in courts of law. Because of a steadfast devotion, among the lawyers and the judges, to traditions and to texts and to precepts which in other callings would have been outgrown and cast aside years and years ago, litigation means vexation and justice stands blindfolded with procrastination on her one hand and delay on her other. A misplaced comma in the indictment invalidates the just conviction of the criminal and saves him from the punishment he merits. The mote is more important to be plucked away than the beam, and those august gentlemen in silken robes, sitting in the high places of the high temple, gag at the gnat and swallow the camel without visible strain. That bumpy, torpid appearance, so often observed, is the result of having swallowed many camels. Verily, as has been said before, we live in times of change, and no man knows what the morrow may bring forth; but of this much we may be sure: That, disdaining all the filtration devices of progress, the law will continue to be true to the moss-covered precedent, the iron-bound precedent, the old oak-headed precedent that hangs in the well.

Sense and Nonsense

Not Altogether Wasted

MARGARET ILLINGTON, the actress, was a protégée of Mark Twain during the latter years of his life, and when on the road used to correspond with him regularly. In one letter she told him she was not feeling well, and he wrote back promptly, advising her to try a new style of magnetic health belt that had just been placed on the market.

Miss Illington took the advice. After using the device for a few days she wrote him as follows:

"I bought one of those belts, but it did not help me a bit."

By wire back came this answer:

"It helped me. I own stock in the company.
"SAMUEL L. CLEMENS."

One of Those Fixed Feasts

WILL HOGG, of Texas, says that down in Houston, one Monday morning, a negro boy in his employ came to him with a request.

"Boss," said the darky, "I'd lak to git off nex' Friday fur the day."

"What for?" inquired Hogg.

"Got to go to a fun'el."

"Whose funeral is it?"

"My uncle's."

"When did your uncle die?"

"Lawd, boss, he ain't daid yit!"

"Then how do you know his funeral is going to take place on Friday?"

"'Ca'se dey's gwine hang him Thursday!"

Absolutely Unjustified

WILTON LACKAYE says that one day, while he was playing an engagement in Chicago, he took a stroll along South Clark Street and came to a district of secondhand-clothing shops. Every other show window was filled with garments bearing seductively worded legends purporting to represent that these offerings had been cast back upon the makers' hands through no fault of their own, but rather because of the captiousness of the original purchaser.

The words "Misfit," "Not Claimed," "Tailor's Sample," and so on, recurred time and time again.

But in one window originality in the gentle art of advertising phraseology had scored a triumph. Behind the glass dangled a pair of trousers of a most startling cut and an even more startling pattern. The colors fairly leaped through the window to smite the passer-by in the eye. To the garment was affixed a card bearing this statement:

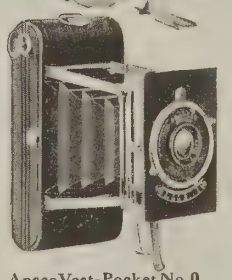
"These Pants Were Uncalled-For."

A Little Ahead of Time

EDITORS get many interesting manuscripts from amateurs; but the prize came the other day to Douglas Doty, of the Century. It was a one-act play, and the scene—the author wrote—

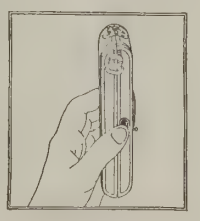
"Takes place on Christmas Eve, 500 B. C."

The Sign of the Ansco Dealer

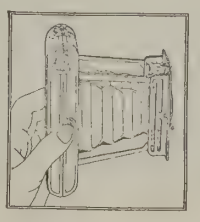


Ansco Vest-Pocket No. 0

Equipped with single achromatic lens, $7; with focusing device, Actus shutter and Modico Anastigmat lens, F7.5, $15; Extraspeed Bionic shutter and Ansco Anastigmat Lens, F6.3, $25.



Press the buttons and the camera front springs out—ready to "snap."



Pictures that tell a story reward the user of the always-ready Ansco Vest-Pocket No. 0—the only camera that literally *jumps* into action when you press the buttons that open it.

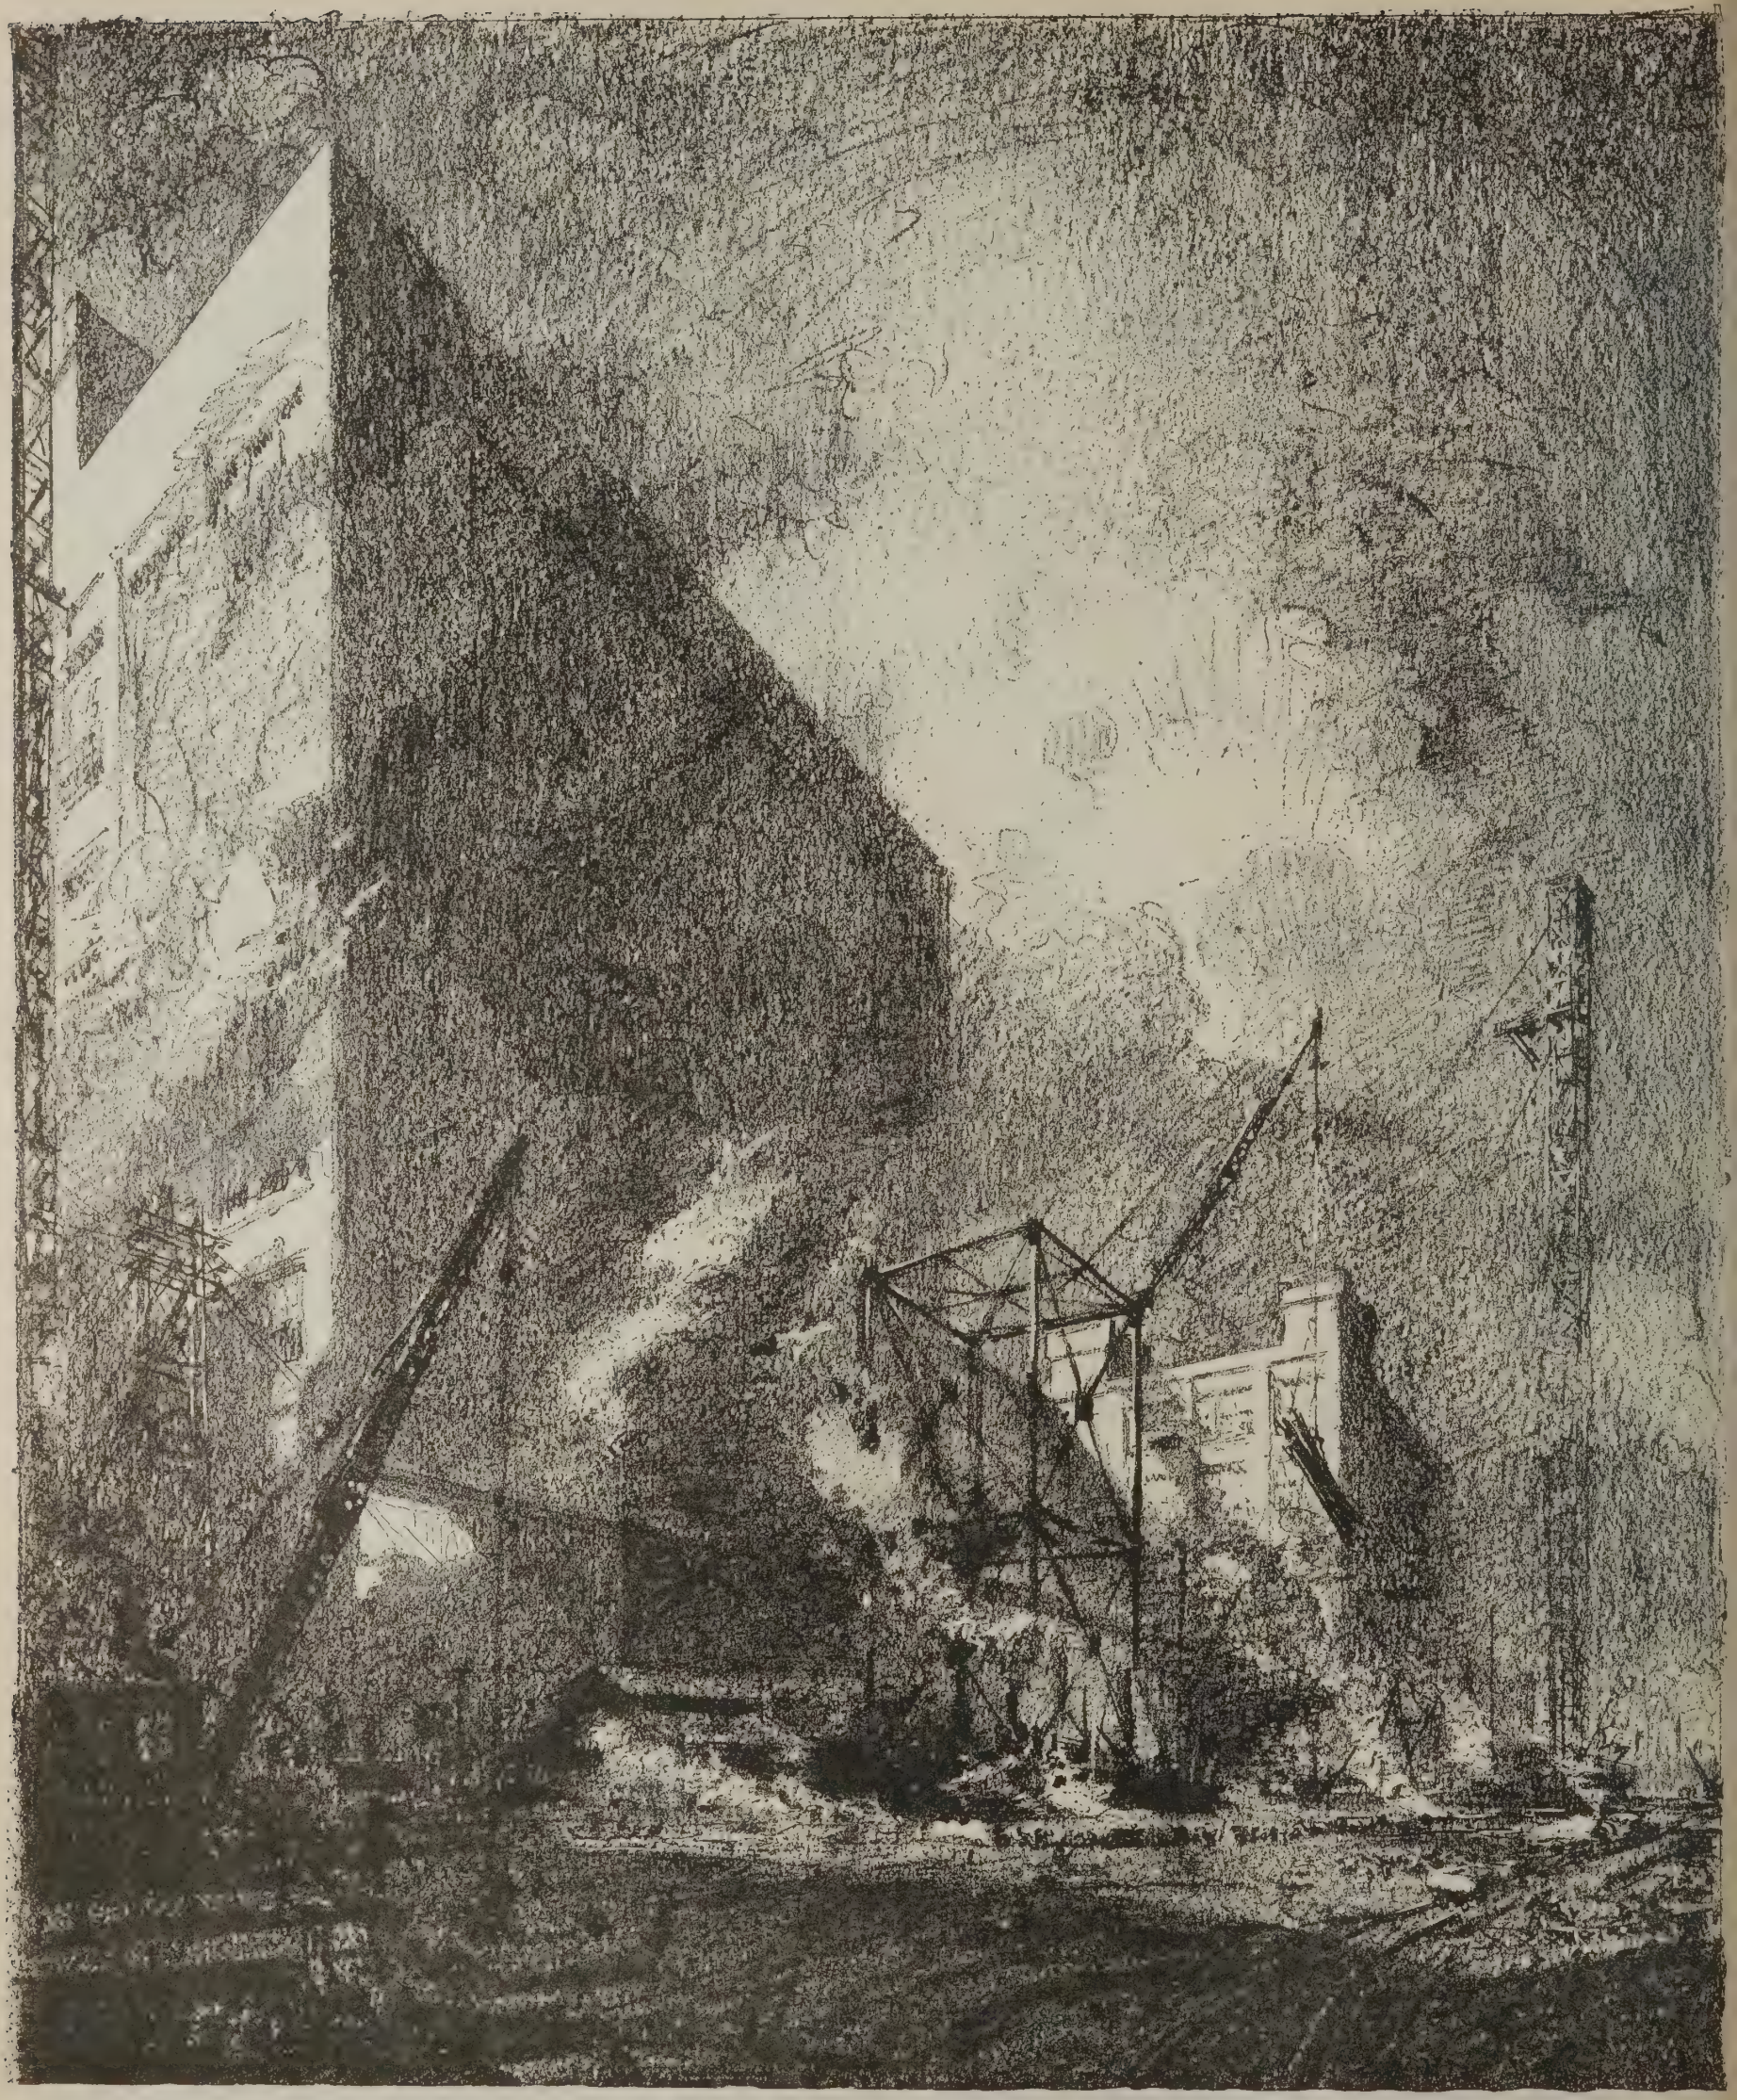
The anastigmat model, equipped with a focusing device, essential for high-speed pictures at short range, is the only camera of its kind in the world for taking 1⅝ x 2½-inch pictures. No anastigmat lens is worth its price unless it *is* used with a focusing device.

Other members of the Ansco Vest-Pocket family range in price from $7.50, for the fixed-focus V-P. No. 1, to $55.00 for the superb Ansco V-P. Speedex.

The pictures they take are so clear and sharp they can be enlarged to many times their size.

Fifty-eight styles of cameras—some at $2—are described in the Ansco catalog, free from the Ansco dealer or from us.

ANSCO COMPANY BINGHAMTON, NEW YORK



"It Was Builded of Belief—This Home of Neōlin"

"It Was Builded of Belief— This Home of Neōlin"

SHEER and stark it rises, the new home of Neōlin, a cathedral of industry, a body of brick and cement and steel if you will—and yet far more than this.

It was builded of Belief.

Without that no thousands would stir its power or turn its wheels. No millions could gain what it can give.

Without that today there could not be Neōlin.

So this is a text upon Belief, as it is the story of Neōlin.

We believe in Neōlin.

* * *

When today we look back upon our first conception of what was to be Neōlin, we sometimes smile a little to ourselves—and we wonder, too.

For Neōlin has been to us a Great Adventure and, like other great adventures, had in it more than a tinge of the audacious.

Think of the conception: A shoe-sole to supplant leather—leather which for centuries had been the measure of the world's sole-wear value!

Yet, was a better-than-leather sole substance quite impossible? Were wear and pliancy, waterproofness and tread-sureness things to be despaired of in a shoe-sole?

Belief called Science in. And Science, from her laboratory, answered by creating a new material which proved that leather *could* be surpassed. And that substance was Neōlin.

That invention, not unnaturally, meant much to us. And yet, what problems its coming raised! Here was what well might be the shoe-sole of the future.

Yet here, too, was that whose very possibilities necessitated a factory greatly planned, the production of literal armies of machines, the conscription of vast financial resources.

And these things were to be balanced against—what?

—Against acceptance by manufacturers to whom leather was at once a criterion and a custom.

—Against acceptance by a public slow to move but through the path of habit.

Yet, we believed in Neōlin Soles.

And Belief answered.

So became possible the investment of two millions of dollars in this great Neōlin structure and that which is housed within it.

So 400,000 feet of floor space spanned out into a jungled might of machinery—invented to fashion this new material.

So thousands of skilled operatives came, that Neōlin would be what we visioned: wear-hard, yet flexible; waterproof, yet grip-sure and modern looking.

So, in a quick, few months arose this new, industrial palace of Aladdin—the equal of the great Goodyear plant itself as it was three years ago. Capable of producing *now* 75,000 pairs of Neōlin Soles daily. And which, by July 1st, will make each day 100,000 pairs.

May we not admit a pardonable pride in Neōlin as we view in concrete what yesterday was but the "stuff of dreams"?

May we not view the stern perspectives of this building as a monument to our belief in an Idea?

May we not feel humanly gratified that the millions who wear Neōlin Soles are proving their virtues each walking day?

They believe in Neōlin.

You, too, will believe in Neōlin.

* * *

Neōlin Soles are modern, synthetic shoe-soles. Their wear is remarkable. While loyal and enduring in lasting qualities, they are distinctly modern looking.

They are flexible, and easy to the feet. They are waterproof. They are step-sure and grip-ground. They need no breaking in. They will not scratch floors or furniture. They are always the same on any price of shoe.

In black, white, tan. In grown-ups' and children's sizes.

To avoid imitations, *mark* that mark; stamp it on your memory—Neōlin

—the trade symbol for a never changing quality product of

Two persons	$5 to $8
Three persons	$6 to $9
Four persons	$7 to $12

1026 rooms—834 with private bath

HOTEL LA SALLE

THE CONSTABLE OF COPPER SKY

(Continued from Page 11)

And now the other faces went white.

"In the back room of Judge Navlett's office, Sim," admitted Dad Tolliver remorsefully. "We never once remembered that Kelley's pile was locked in the safe in the next room! We—we ——"

"Why don't you go on and admit it all?" sneered the old trailer. "You were all drunk—that's what was the matter with you!"

Sim left the table and the company followed him into the street, leaving the boy and girl weeping together beneath the white bell that was to have hung above their wedding feast.

An excited crowd surged about Judge Navlett's office. Inside the building, interest centered upon the battered old safe, which stood open, with papers littering the floor all about it.

"We've just sent a man to the telegraph office," said Judge Navlett. "We're telegraphing all over the country, giving the description of the man; for undoubtedly it was he. I—I'm afraid Copper Sky was very lax yesterday; very lax indeed."

The old man caressed his aching head with a trembling hand.

Suddenly the messenger dashed back into the room.

"I didn't send the messages after all, Judge!" he panted. "They have caught our man already, and he's in the calaboose down at Cactus Center. There can't be any mistake—V-shaped scar on his chin; patch of white ——"

"How about the money?" yelled a dozen voices at once. "Did he have the money with him?"

"No; they didn't get the money," said the messenger. "I asked 'em that; but the operator said he hadn't time to tell us more right now. Said we'd find it all in the Cactus Center Times when the train comes in to-day."

"Ain't it like Cactus Center?" sneered an indignant voice. "No time! It was a jab at Copper Sky; they wanted us to know they didn't consider our anxiety worth their notice."

About noon the train came in. And the county seat's newspaper, a crazy sheet that was the pride of Cactus Center and an object of jealous loathing on the part of Copper Sky, was torn open feverishly in Johnny Eisinger's place, where the crowd was now assembled. Dad Tolliver read from it, standing upon a chair so that all might benefit impartially.

"About midnight," he read, "a man got into a fight with the bartender in the Sandstorm Saloon.

"Our efficient constable, Red Ochiltree, promptly arrested the stranger and put him in jail, where he now awaits trial on the charges of disorderly conduct, drunkenness, assault with intent to kill, and resisting an officer.

"However, he is likely to face a more serious charge later on. Early this morning a wire came from Copper Sky stating that twelve thousand dollars in gold had been stolen from that little village; and the description it gave of the suspected thief tallied exactly with that of the stranger who was arrested in the Sandstorm.

"A heavy gun and a wicked knife were taken from the person of the suspect; but no money. However, the officials are confident that at the forthcoming trial they will be able to wring from the prisoner the whereabouts of the concealed treasure—always supposing that Copper Sky really had that much and really lost it."

An excited buzz of conversation followed the reading of the article; but it hushed suddenly when Old Dad held up his hand.

"Listen!" said the old man. "Here's another article. It's headed: Copper Sky's Big Jag."

And then he read a facetious screed that turned Copper Sky's milk of human kindness to wormwood and gall, and planted a barbed arrow a foot deep in Old Sim Yaples' writhing soul.

"Yesterday," the article read, "Copper Sky held an election. It was a weird affair! When the citizens of that funny little bunch of shacks sobered up this morning they found that for constable they had elected the Village Drunk; and that somebody had stolen everything they owned, from the bartender's bungstarter to the key of the new calaboose ——"

Sim Yaples did not wait to hear the end of the humorous screed. He stumbled from the saloon door and headed straight toward Cactus Center. An old Indian trailer again, all the emotions of the last two days had crystallized into a fierce thirst for blood. He passed the new calaboose and turned his face aside. Half loping, he slipped like a coyote into the brush that encircled the town, walking on his toes and crooning wickedly to himself:

"Bury me to-morrow where the lily blossoms spring
Underneath the willows, while the little robins sing.
You will yearn to see me—but ah, nevermore you shall—
Walkin' down through Laramie with Snagtooth Sal."

IV

THE county seat's jail, unlike the proud structure in Copper Sky, stood down in the darkest portion of town and in an isolated spot a block from the main thoroughfare. A sort of pariah it seemed, from which all the other buildings drew in their skirts and held virtuously aloof. The human element apparently shared the sentiment; for no one moved in the vicinity of the squat, square building with the heavy barred door. A block away, sure of his prisoner, locked in that massive structure, Red Ochiltree, Constable of Cactus Center, slept noisily and with abandon. It was the uncertain hour halfway between midnight and the break of day.

Old Sim Yaples slid out of the shadows and stood contemplating the unhandsome front of the jail. For an hour he had been haunting the dark places about town; but, of course, everybody was asleep and he saw no one. Gradually the black vindictiveness cleared from his brain and it suddenly came to him that there remained to him

From His Disadvantageous Position Upon the Floor the Old Trailer Cursed in Spanish and Piute and Plains English of the Days of Kit Carson

The Maxwell Cabriolet

$865

FOR professional men and salesmen; for social events as well as general business occasions, the Maxwell Cabriolet provides warm and comfortable transportation.

Especially in unpleasant weather, when protection is desired against cold, rain, snow and wind, this closed car is most useful.

And in favorable weather the glass windows can be dropped into the doors and the top folded back, resulting in a very attractive, open roadster body.

Thus the Maxwell Cabriolet possesses the advantage of two bodies—combined, of course, with the features of economy, comfort and endurance for which the Maxwell chassis has always stood.

Dealers are urged to provide themselves immediately with an adequate number of these cars in order to participate in the large and growing demand for them.

Roadster $620; Touring Car $635; Town Car $915; Sedan $985, completely equipped including electric starter and lights. All prices f. o. b. Detroit.
Canadian prices: Roadster $870; Touring Car $890, f. o. b. Windsor, Ont.

Have an Acme Quality Shelf

For the many "touching-up" jobs about the house, keep always on hand at least a can each of Acme Quality Varnotile, a varnish for floors, woodwork and furniture; Acme Quality White Enamel for iron bedsteads, furniture, woodwork and all similar surfaces; a quart of Acme Quality Floor Paint of the right color.

(Continued from Page 54)

a still pleasanter way to rip the skin off Cactus Center and spill its warm blood all over the place.

A long time the old man stood there motionless, uncanny as a yellow-faced ghost, listening and watching. Then he stole up to the jail door and inserted his key into the lock. He twisted it and grinned with satisfaction when the sullen click told that the lock had responded. He put his shoulder to the door and shoved it ajar. Then he melted back into the darkness.

At the first rasp of the key the prisoner had sprung to his feet, every nerve quivering. The effects of his spree, begun so inauspiciously in Copper Sky and winding up so disastrously in Cactus Center, were wearing off, and he was feeling shaken and nervous. All night he had been busy trying the walls, but without a ray of hope to reward his industry; then ——

A click of the lock! The iron door swung open. But no one appeared. At first the man thought he must have dreamed it; but no, across the desert he could see a thin crescent of a moon and the song of a Mexican whippoorwill came to him quite distinctly. A block or two away a freight engine snorted and steamed up and down, and occasionally cars bumped noisily together, sounding loud in the stillness of the night. A slow breeze came in and invited him out.

He advanced stealthily. The door was indeed open! But why? He had no friends here—no acquaintances, even. Had some Good Samaritan opened the door out of pity? His mind was blurred. No matter; the door was open and he yearned to get out.

But with the same instinct that leads a wild thing to fear a mystery the man approached the door, fearing a trap. Then he grinned to himself. A trap! Wasn't he already trapped as badly as he possibly could be? He slipped through the doorway and ran swiftly from the place. With the feeling of the sand beneath his feet, his incredulity vanished. He was free! But the mystery remained.

Like a part of the night itself, the man doubled in and out of the shadows and made for the brush at the outer edge of town. Here he turned and worked cautiously over to the railroad track. The freight train had finished its switching and was made up for the journey onward toward the north. As the man reached the edge of the right of way the engine clanked past him. Twenty or thirty box cars rattled after; and then came a series of jolts and the train came to a standstill, with the engine beside the water tank up the track.

The man waiting in the edge of the brush moved swiftly to a pile of old ties, and, stooping, lifted aside a couple of the timbers. From under them he pulled a heavy object. It was indeed heavy, for he grunted when he swung it up on his shoulder and moved nearer to an empty box car, whose dark open doorway yawned opposite him. After looking carefully up and down, he boosted his burden in through the open doorway. It met the floor with a rich, subdued chinking sound. Another stealthy look up and down and the man followed his burden into the dark interior.

From his own position out in the brush Old Sim Yaples made a short detour and crawled under the train a few car lengths to the rear. Stealing carefully forward on the other side, he noted with satisfaction that on that side the door of the ex-prisoner's car was locked hard and fast. He went on past the car and crawled back. As he did this there was a clang and a rattle of chains up at the tank, and a splash of escaped water as the dripping spout was flung back. A moment later the long train was again in motion, headed toward Copper Sky.

Old Sim gazed earnestly at the blackness of the open doorway as it passed him. Nothing moved. As the rear end of the car went by he caught the ladder and swung himself up between the two cars. It was a most uncomfortable position, but the old man clung.

The long train gathered momentum and went swaying and bumping across the wide desert, through the wilderness of greasewood and yucca palms, the disreputable bald head of Old Sim Yaples peering round the corner of the mysterious car, swaying and bumping with the train, but never for a moment losing sight of the blackness of the open doorway ahead.

Once inside the car, the outlaw had fallen immediately asleep. He had been subjected to a long nervous strain; and now that he felt reasonably safe, he relaxed. He woke when the train jolted to a standstill and wondered what station it was.

"Hey! Come out of there!"

A particularly disagreeable voice it was. Rage and disgust filled the soul of the tired man, hidden back in the darkness of the car. A brakeman, of course! He had heard them before. Moreover, they had thrown coal at him and cursed him, even as this voice was beginning to curse; and he wished the whole tribe of brakemen might be in the deepest part of the sea for all eternity.

"You can't fool me—I saw you go in there!" went on the cracked voice. "Are you coming—or will I have to crawl in there and beat you up into a sausage?"

Again the voice trailed off into weird profanity; and the man rose, with a heartfelt objurgation. He had no gun, of course; they had taken that from him at the jail.

"I'm coming!" he growled sullenly.

He heaved up his pack and set it in the car's doorway. Below him was a small figure, seen indistinctly in the darkness. His first impulse was to jump straight at the figure and bear it to the earth, trusting to his ability to bring things to a successful issue in a man-to-man affair.

In the same instant, however, he foresaw more serious trouble; for how did he know there wasn't another brakeman, or even two of them, upon the car directly above his head? He jumped down from the car; his hat fell off; a patch of white showed faintly in the uncertain light ——

Whump!

The heavy old revolver landed squarely and scientifically upon the patch of white hair. The man went to the ground like a sack of spuds. Old Sim snapped the cuffs upon his wrists and hurriedly dragged him back into the brush. The train was already in motion. The old man dashed after it and dragged the heavy buckskin bag from the car floor, exulting when he felt the weight of it. Then he took off his hat and mopped his bald head.

Far up the track the tail light of the caboose rocked away toward Tehachapi Pass. Over the town the first streaks of the new day were shooting upward from the east. Sim Yaples was back in Copper Sky—and no man had seen him go or come.

Copper Sky at first thought it was a lynching. Gunshots and bloodcurdling yells sounded from the direction of the Public Square. The first excited arrivals discovered Old Sim Yaples sitting upon a buckskin bag before the door of the new calaboose, a bottle in one hand and a barking gun in the other. Between yells he sang; and now it sounded like a pæan of victory:

"Plant a little stone above the little mound of sod;
Write: 'Here lies a lovin' and a busted heart, begod!
Nevermore you'll see him walkin' proudly with his gal—
Walkin' down through Laramie with Snagtooth Sal.'"

Glaring through the grating above the little old villain's head was a rage-convulsed face, a V-shaped scar on its chin and a patch of white hair above the forehead, stained a new red.

Old Sim was too busy to explain. Nor would he allow anyone to touch the buckskin bag. With great difficulty he hoisted it to his shoulder and staggered away to the Palace Hotel dining room, where the smell of breakfast was in the air. Here he called loudly for Kelley Briles and Louie May. When the two young people came in he dropped the chinking buckskin bag heavily upon the table, under the white bell of wilting flowers.

"There she ish!" he announced with terrible dignity. "Present; complimentsh of Cons'able of Copper Sky! Gobblesh you, my chillern!"

Out of the swirl of excited memories which marked that day, Copper Sky never forgot that Louie May kissed Old Sim resoundingly. And Old Sim lifted up his voice and wept; for truly he was a disreputable old pagan, and he knew it. And, knowing this, he was touched and grateful when the gods brought him an unexpected gift from Paradise.

Such news travels swiftly. Within an hour the citizens of Cactus Center were in a turmoil. Following closely upon the shock of finding their jail forced, and their noted

prisoner gone, came an insulting wire from Copper Sky. It was a long message, addressed to the county seat through the Cactus Center Times; and it read:

"Early this morning Sim Yaples, once an old Indian trailer and now the highly efficient Constable of Copper Sky, brought in the robber who, night before last, broke open the safe of Judge Navlett and escaped with twelve thousand dollars in gold belonging to Mr. Kelley Briles, of this city. Constable Yaples not only captured the robber but secured every dollar of the missing gold as well.

"A laughable feature of the whole affair is the fact that our neighboring village of Cactus Center thought it had the robber! Such is the curse of rum!

"The robber will be tried before Judge Navlett, a jurist who is known all over California for his scrupulous honesty and judicial balance. Judge Navlett was elected Justice of the Peace at the recent election. Copper Sky feels proud of its Justice, and of its new constable, who has signalized his election by making such an important arrest."

When Cactus Center read this scandalous insult it had a fit. Then it had another one. Threatening recklessly, Red Ochiltree buckled on his revolver and ran for the northbound passenger train. Cactus Center watched him go and sent its prayers along. The honor of the county seat was in Red's hands.

When the northbound passenger train pulled into Copper Sky a howling mob saw Kelley Briles and his radiant bride aboard, to begin their wedding journey to San Francisco. The air was thick with rice and old shoes and the acrid smoke of many glad guns. In the express car the happy couple's fortune reposed safely under the key of the express company's strong box. In the excitement it was only after the train had disappeared into the greasewood that it was seen that Red Ochiltree had come on the smoker. He walked up to Old Sim Yaples, stuttering with rage.

"See here, Yaples!" he said. "The county seat sent me up here to find out something: What's this we hear about that Copper Sky robber?"

"Danged if I know!" said Old Sim, cutting off a chunk of tobacco and pinching it between his toothless gums. "What is it you hear, anyway?"

"Is—is it true that you've got him?"

"Of course!" Old Sim assured him readily. "Got all the money back too! Didn't you know that Copper Sky never fails to get what she goes after?"

Ochiltree did not speak for some moments. He was struggling for control of himself.

"Where did you get him?" he demanded finally.

Old Sim spat afar.

"That's the puzzle!" he agreed. "Where did we get him?"

Choking with fury, Ochiltree made a spasmodic movement toward the old trailer. His twitching hand dropped toward his revolver; then, caught by a hint of prudence, it twitched away again.

"Our jail was broken open!" he declared hoarsely. "Our prisoner was gone." His eyes dropped to Old Sim's feet. "And in the sand we found a moccasin track! It looks—it looks ——"

He hesitated. Old Sim ceased chewing and his red-rimmed lashless lids narrowed. His mummylike head was thrust slightly forward and his pale eyes regarded Ochiltree with the unwinking intentness of a waiting rattlesnake.

"Well," he suggested softly, "how does it look?"

Ochiltree came to himself and glanced about. An ominous silence had fallen upon the crowd of Copper Sky men.

"It—it looks—funny!" he concluded.

Old Sim chewed again and grinned like a tickled mummy.

"It sure does!" he again agreed cheerfully. "I'm laughin' myself sick over it."

Again Red Ochiltree looked about the circle of stern-faced Copper Sky warriors. The local freight, which had been sidetracked to allow the passage of the express, now pulled out on the main line and started bumping toward the south. Ochiltree turned and swung aboard the tail of the caboose. There really seemed nothing else for him to do. As he disappeared down the track he shook his fist in purple-faced fury at the grinning group of men.

"We'll remember this!" he yelled.

"You bet you will!" squalled Old Sim. "We won't ever let you forget it!"

And, adjusting his enormous badge of office cockily upon his chest, the old pagan padded away up the street, singing happily to himself:

"Sal, Sal,
My heart it broke to-day—
Broke in two forever when they laid you in the clay;
I would give creation to be walkin' with my gal—
Walkin' down through Laramie with Snagtooth Sal."

Telling the Truth About Merchandise

By EVERETT RHODES CASTLE

I WAS a good reporter. Up and down State Street, which is newspaper row in D——, I was credited with a good news sense and a happy, human way of writing. For this and sundry other things that are of interest only to those who race with home editions, I was paid forty dollars a week by The Courier, with vague promises of a raise when things straightened out—a time that seemed to promise a very hazy, not to say indefinite, future. But all this was but preliminary to an early June morning when Sam Clark, city editor of the Courier and a very good friend, called me from out of the depths of a pile of morning clips to tell me that Jackson Snow wanted me in the Holy of Holies.

Twelve years before, Snow had purchased the Courier with a large mortgage and forty-five thousand dollars in cash, realized from the sale of his half interest in the Snow Tanneries to his brother Charles. He had brought up the circulation from a scant sixty-five thousand to well over the one hundred thousand mark on a strict diet of facts.

Blunt, quick, he lived in an atmosphere of continual movement. Of his employees he had demanded but two things—the truth and enthusiasm. He was a power in D——, and I am going to be forever grateful for the opportunity he offered me that morning.

"Bought control of the Mammoth Store," he barked at me after I had seated myself in the tall straight-back chair that at all times stood in front of the walnut desk. "Start in Friday, as advertising manager—sixty-five dollars a week!"

"I never wrote a line of advertising in my life," I began.

"Just what I want. I don't want any advertising, I want ideas and truth and a lot of the Missouri attitude. You know, Mack, I have watched Cranston, Miller and half a dozen others grow wealthy on a capital of exaggeration and fraud. I picked out the Mammoth because it was no better and no worse than any of the rest. I am going to see if facts are as much appreciated in the mercantile business as in the newspaper world, and I pick you for the man to make the try. Look at the store as a story, muckrake it, laugh at it, fight it, but give us the truth."

Of course I took the job. But Friday, instead of finding me seated behind the wheel in the advertising office, found me parading the notion and glove aisles as Mr. McKenzie, the new floorwalker. I had decided on this method of making my initial appearance, because a preliminary scouting trip convinced me that, no matter how much I might yearn for truth and the higher realms of mercantile honor, if I didn't know the difference between percale and dress nets I was going to be nothing but a good deal of a Scotch ornament in my new office.

Notebook after notebook was crammed with interviews with clerks, porters, window

(Continued on Page 60)

Success Dresses the Part

Success isn't a matter of chance.

Heads of big businesses, bankers, physicians and lawyers who lead in their profession are men who worked hard while they were at the bottom—that's how they got to the top.

One of the earmarks of success—one of the things that always goes hand in hand with success is the careful way these successful men *"Dress the Part."*

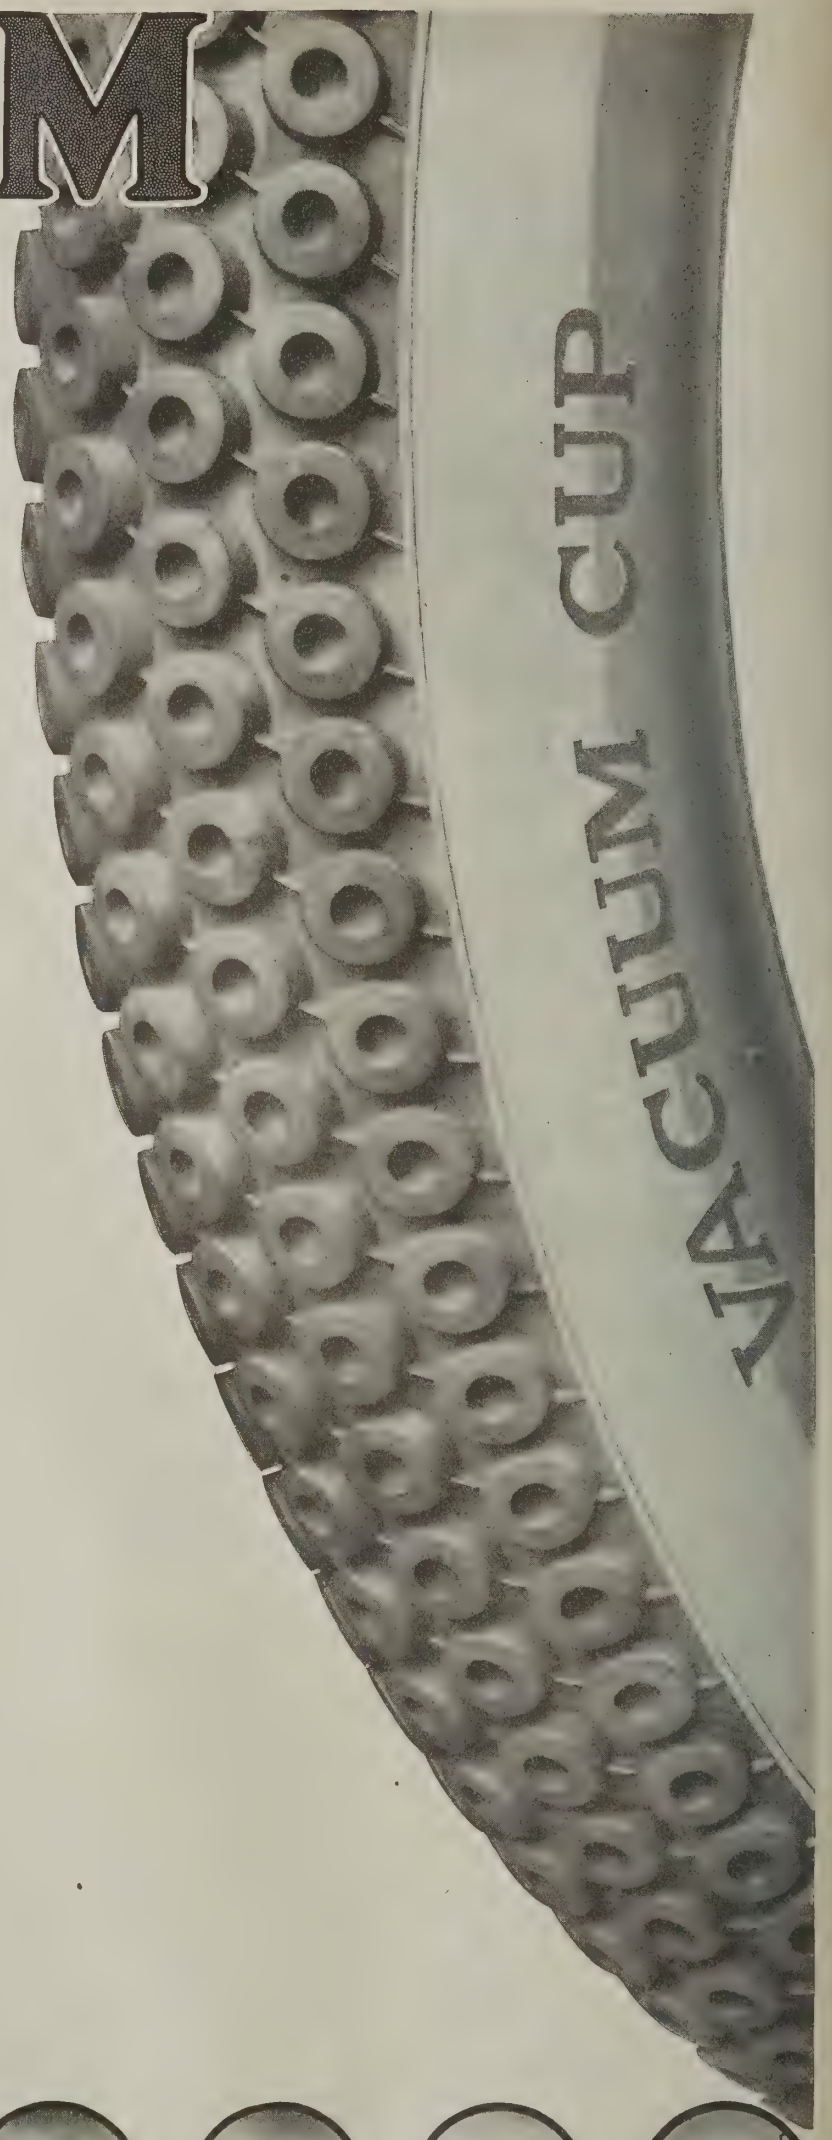
If you are one of the big successes you probably know and wear

ADLER-ROCHESTER Clothes

If you are on the way to success make the journey in clothes that will help you *"Dress the Part"*—ADLER-ROCHESTER CLOTHES.

Send to-day to L. ADLER, BROS. & CO., *Rochester, N. Y., for a copy of the* ADLER-ROCHESTER STYLE BOOK *for Spring, 1917. It illustrates clothes that will be worn this year by successful men.*

VACUUM



How can Pennsylvania Vacuum Cup Quality Tires be sold at prices of just ordinary tires?

Why are Pennsylvania Vacuum Cup Quality Tires not found as standard equipment on new cars?

THE second question effectively answers the first. So keenly competitive has price making become in the automobile industry that every dollar counts.

The automobile manufacturer therefore cannot be expected to offer Vacuum Cup Tires as regular equipment because the Pennsylvania Rubber Company make no special large contract price inducements. To the contrary, their policy is to give *actual user buyers* the full benefit of all price concessions.

Vacuum Cup Tires are made to typify the ideals of their makers—to give users at all times the highest possible quality and the longest, safest, lowest-cost service.

For practically the same price you would pay for ordinary tires sold on a 3,500 mile basis, you can now buy Vacuum Cup Tires with a *guaranteed* service—per warranty tag attached to each casing—of

6,000 Miles

How the cups operate to prevent skidding with no resistance to forward speed.

1. Contact 2. Pressure 3. Seal 4. Suction 5. Grip 6. Edge release 7. Disengagement

CUP TIRES

A RECKLESS chauffeur, that, you say. *No.*

Ought to lose his license. *No.*

Just blind luck that his tires held the pavement. Just a foot and— *Nonsense!*

Careless driving just the same. Yes—*but only careless in the sense that the driver and those he pilots need have no care as to their safety.*

The massive cup-shaped projections on the tires of that car are *Vacuum Cups* and *cannot skid*—they're *guaranteed* on wet, slippery pavements. The cups *hold* the pavement with a *suction grip.*

Retards the speed? Not a bit. The forward rolling of the wheel automatically releases each cup by gently raising it edgewise and releasing the vacuum hold.

The non-skid efficacy of the Vacuum Cup Tread is absolutely complete. It reduces to actual practice through the heavy thick-lipped Vacuum Cups the suction principle of skid-prevention. If they do not convince you, they are returnable at full purchase price, after reasonable trial.

Moving Picture of Actual Vacuum Cup Non-skid Test

Pittsburgh, Nov. 20, 1916.

Pennsylvania Rubber Company,
Jeannette, Pennsylvania.

Gentlemen:

Our driver, J. W. Porter, reports that on November 20, 1916, rain had made the streets dangerous. With Vacuum Cup Tires on all wheels and three passengers in the limousine, Porter drove his car around a sharp corner made by two intersecting streets just back of the Pittsburgh Athletic Club at a speed of twenty-five miles an hour. Porter and the occupants state there was not the least sign of skidding as the cups held the car as firmly to the wet pavement as if the street had been dry.

A moving picture of this test was taken and it conclusively demonstrates our statements even though they may seem somewhat unusual to those who do not know and appreciate Vacuum Cup Tires the way we do.

Yours very truly,
PITTSBURGH TAXICAB COMPANY

EDUCATOR SHOE

(Continued from Page 57)

trimmers, the educational director. Night after night went by while I probed the daily sales slips of the past year that Snow obtained for me. I compared them with each day's advertising. I talked with customers who stopped in my aisles, I chatted with salesmen who sold merchandise to the house—even an idle stenographer reading the daily record of marriage licenses furnished an idea that was later to increase the yearly sales by over ten thousand dollars.

At this time the Mammoth Store was doing a business of approximately five million dollars a year and was paying dividends of nine per cent. It was big business—a big story. I left the advertising department strictly alone and studied Mammoth advertising only incidentally, for I wasn't to write advertising, the Mammoth variety at any rate.

After I analyzed my notes I discovered many interesting facts. For instance, I found that merchandise offered at decided reductions did not sell nearly so well when advertised in the morning papers as when offered in the evening dailies. I learned that advertising in the evening newspapers, on the contrary, did not sell the new and more expensive merchandise, such as imported wraps, gowns, lingerie and period furniture, nearly so well as advertising in the morning papers.

It was also evident that men, in buying their own apparel and furnishings, select noisier and more conspicuous things for themselves than would their wives or sisters, and that they make sixty-five per cent of their purchases on Saturday.

When Two Quarts are Not Two

In the Mammoth Store the average woman will refuse to buy five-dollar hats at fifty cents, but she will buy the same hats in great numbers when marked at $3.89. Moreover, the lowliest clerk is the greatest single factor in a store's success. And it isn't cleverness or easy speech that makes a good salesman. Faith and belief in the merchandise offered sell more merchandise than any amount of blarney.

The day after I handed in my resignation as floor walker, accompanied by two carpenters I advanced on my new position to find the entire staff assembled to greet me—Miss M——, who wrote the women's wear copy; Hawkins, who cared for men's clothing and furnishings as well as the furniture department; Miss W——, a prim young woman who handled proofs; and Milton, an office boy who might have stepped out of a comic supplement. All were of the old régime and viewed with frosty skepticism the advent of the literary floorwalker.

Polite greetings turned to protests, however, when both carpenters promptly started to rip out the partitions that gave each a little private office in which to sit and woo the muse. Protests turned to open revolt when a big horseshoe city desk went into the center of the room. I placed my chair in the center and asked the rest to bring their chairs and group about the outer side. The advertising office of the Mammoth Store had given way to the editorial rooms of the Mammoth Store News.

Heretofore all advertising copy had been written from yellow slips supplied by the different buyers and, as the majority of buyers were gifted with a purchasing rather than a literary sense, it was often hard to dig beneath the tons of adjectives, the mildest of which were "wonderful" and "great." When a member of the advertising department wanted an ad, he or she formerly reached for the nearest telephone and called for it, much after the fashion of ringing for ice water in a hotel. But who ever heard of a newspaper ordering news? The yellow slips were promptly discarded and we started out to hunt and search for the kind of advertising we wanted.

An assignment card came into existence. Miss M——, instead of sitting quietly at her desk all day, found that promptly upon her arrival in the morning she was to see Mr. Morse, the cloak buyer, and get a good story about the new fall suits; Hawkins was assigned to cover the men's suit sale and to bring in a top head yarn, and so on down the list. With the first day's assignments out of the way, the head of the receiving room was called in to help me put in force my first beat.

Now, on every well-regulated newspaper there are a half dozen men who cover news beats—places such as police stations, courts, Federal offices, hotels and other places where news is regular and liable to break at any time. I gave the receiving chief the beat in his department.

"Every time a shipment of new goods reaches the house I want you to fill out a small slip and tell me just what it is and what buyer ordered it," I told him.

I figured this would make it possible for me to know the new things that were arriving daily, without waiting five or six days for some buyer to remember that he might just as well advertise them. I wasn't going to let any other store scoop the Mammoth news by advertising some desirable new article first. Before I had sent the staff out for their first stories that morning I had fixed half past twelve as home-edition time, when all copy must be in for the day.

Hawkins arrived first with a story of men's twenty-five-dollar suits to be sold at $18.75.

"Of course there is no doubt that these suits are really twenty-five-dollar values?" I queried.

"Well, I'll tell you," confided Hawkins: "Goldman bought them as a factory close-out—mostly all small sizes. Sure! They would sell at twenty-five dollars if all the sizes and models were represented."

"How about the other sizes?" I asked.

"Oh, he filled those out with suits from his regular twenty-dollar line."

"Then rewrite your story and say so!"

A few days later a letter from a down-state mail-order customer gave me a chance to introduce my old friend Truth to the housewares section. In the letter the woman, who was an old and desirable customer, complained that a two-quart saucepan which she had purchased at a recent sale was short measure and that as a consequence a new recipe which she was trying failed very miserably.

Without a word to the buyer, a sample of every household utensil offered in that sale was quietly brought to the advertising office and the entire staff spent a busy hour testing the various pieces with certified measures. It was discovered that twelve out of nineteen pieces held nearly three-quarters of a cup less than the advertised two quarts.

Then a little call was made on the buyer, who cheerfully acknowledged that the measures did run a trifle short, but the manufacturer had sold them at a special price as a consequence. He didn't think there was anything wrong in calling them two-quart measures. "They looked it, didn't they?" Later a quiet talk in the executive office changed his views.

However, all these little things that were gradually changing the advertising policy of the store left their sting. Buyer after buyer went to the executive office and demanded that the old order be returned. They declared that the business would never stand the strain against the free-and-easy statements and advertising of competing stores. With the exception of perhaps a dozen of the eighty-seven buyers, all were convinced that the store was undergoing a moral dose of sulphur and molasses that was going to leave the patient weaker than ever.

Opposition finally crystallized at one of the weekly buyers' meetings about one month after the inauguration of the new policies. The word had been passed about that Filkens, the shoe buyer, was going to make it interesting. And he did.

The Fate of Filkens' Ultimatum

There was a hush of anticipation as Filkens stood up after the routine of the meeting had been disposed of and asked permission of Mr. Critchfield to say a few words. Filkens came loaded for bear. In one hand he had a copy of a recent advertisement in which the advertising department had deleted the comparative prices four and five dollars and merely had said that the shoes were good value at $2.89.

He produced letters from several large shoe manufacturers, who apparently had been asked to tell what the shoes would cost the manufacturer on to-day's soaring leather market. All agreed that the shoes could not be manufactured for less than from $3.50 to $3.85, making the retail value from five dollars to six dollars.

Everyone present felt that at last the literary floorwalker had come a very large and annoying cropper. Filkens then called upon the advertising department to run the advertisement the next day with the comparative prices he had first quoted. It amounted to an ultimatum.

I was totally unprepared, but I remembered why the first figures had been deleted. It was not because the values were high but because the styles were several years old and we felt certain that any woman who wanted a pair of shoes and had five dollars in cash to spend would never purchase the shoes in question, even if the leather was worth twice ten dollars. I stood up.

"Men," I said, "I won't argue with Filkens, but if he will send for a pair of the shoes to be advertised and a pair that he carries in stock and sells regularly at five dollars, I will give you a little demonstration of just why those prices were deleted."

Mr. Filkens would send and did.

With the shoes placed on a table, with the buyers grouped about, a clerk from a nearby department was called in.

"Here are two pairs of shoes," I told her. "Now if you had five dollars and needed a pair of shoes, which pair of shoes would you select if both pairs were priced at five dollars?"

It took but a few moments for the girl to select the pair that sold regularly for five dollars. Four successive clerks likewise preferred the regular five-dollar shoes.

Truth Better Than Fiction

I had never made a speech in my life, but the time had come, so I stood up again.

"The advertising department is under fire," I began. "The truth of our advertising has been questioned. It has been charged with bearing inflated claims and with misrepresenting merchandise. How much truth there has been in the charge doesn't concern us now. 'Let the dead Past bury its dead.' We will not underwrite the honesty of the whole store, but if the judgment of the department manager is so warped by his enthusiasm and desire for sales that he cannot tell the truth about his merchandise, it is beyond the province of the advertising department to change him. That was the duty of his parents and his Sunday-school teacher, and if they have been remiss it is an oversight that we do not quite feel it our duty to correct."

I was well under way and my Scotch blood sent a flood of words to my tongue.

"The reason this point is made is that the advertising department has, in the past, depended in the main for its information upon the statements made by department managers and, although in the majority of cases it has received authentic information, in some instances it has received downright lies. I say 'lies' with a thorough understanding of the meaning of the word. You can't gild a misstatement of facts by calling it advertising enthusiasm. When a woman, whose confidence in the Mammoth Store has been carefully nurtured through years of honest dealing, is misled into buying merchandise that is not up to the Mammoth standard, she does not hesitate to state in plain terms that our advertising lies and that the store lies.

"We will not underwrite the honesty of this store, but we will underwrite the honesty of all advertising that goes out under the signature of the Mammoth Store. Regardless of whether the advertising has pep, originality or pulling power, it will have the truth. And here is the way we are going to guarantee the truth of the advertising: The burden of proof as to comparative values will lie with the department manager, and no comparative values will be used unless definite proof is made to the advertising department that the comparative prices are genuine.

"Hereafter the advertising department will promptly sever diplomatic relations with the department that tries by any means to put through a fraudulent value. And the severance of diplomatic relations means that the department so cut off must establish beyond question its honesty of purpose before it can again be carried in the advertising columns of the Mammoth Store.

"In a nutshell, from now on we are going to look at this store as the customer looks at it and not as we want the customer to look at it. I want your coöperation. I know you are doubtful of my method, because you feel that it gives competition an unfair advantage.

"Coöperate all you can, give our brand of advertising a chance for six months, and if in that time business has not shown a substantial increase you may have my resignation. What do you say?"

Corbin, the linen buyer, and one of the few men who really believed in the new order of things, started the ball with a

(Concluded on Page 62)

GRATON & KNIGHT

Standardized Series LEATHER BELTING

Tanned by us for belting use

"Let's scrap our belting specification," said the Master Mechanic

The Purchasing Agent was startled. "Why?" he asked.

"It doesn't protect us," replied the M. M. "We buy lots of belting for First Quality that proves to be mixed with seconds and shoulder. We can't test every roll—and you know mighty well there's nobody in this shop wise enough to detect skillfully mixed belting."

"What'll we do?" inquired the P. A.

"I'd advise that we adopt the Graton & Knight Standardized Series as our own belting standards. They're the largest belt makers in the world—been 66 years developing and classifying their Series of Brands, until it covers every possible belt need. And the individual Brands run absolutely uniform—I've used enough to know that."

"How does it work?"—the Purchasing Agent was interested.

"You simply get a set of the Graton & Knight Standardized Belts as recommended for our needs, with the official description of each. Then when you need a belt, you select the brand that's right for the job—get bids on that or equal. Thus you make *actual service* the basis for comparison—not just a written specification."

"I'll go you, Joe," cried the P. A. "If there's one thing I've always wanted to standardize, it is our belting—but I haven't known how to go about it. I'll have the Graton & Knight salesman come and tell us how to do it. Be sure you're there, Joe."

* * *

Are YOU buying belts on discount—or on performance?

Do you KNOW when your specification is met—or do you take a chance?

The only way to be sure of belting is to have a simple, safe and trustworthy set of real belting standards to go by. Graton & Knight Standardized Series furnishes this.

Write today for the Graton & Knight Belting Book—or have the nearest Graton & Knight representative call on you.

mighty "Yes," and the majority of the others followed suit in a straggling chorus.

The next step meant another change that would have aroused fresh antagonism if the hands-off policy, with its attendant watchful waiting, had not been inaugurated. During the first weeks of the Mammoth Store News no attempt had been made to change the form of advertising, beyond the elimination of all exaggeration. Now the little green notebook came out to help. No longer were new pieces of Chippendale advertised in the sensational evening paper, no longer did news of fifteen-cent percales at nine cents a yard go into the staid, conservative morning paper. And the furniture and wash-goods sections both felt the results immediately.

Miss M——, instead of writing "Women's Coats at $27.50" as a heading for a coat advertisement, wrote "Your New Coat Must Be Trimmed With Fur!" Instead of the humdrum description of models and colors her introduction was a breezy story that told of the increasing tendency of the great designers, Lanvrin, Jenny and the rest, to use fur in every possible way. Then followed a short, easily assimilated description of several models, and in many cases the price was the last thing mentioned. It was news.

The women of D—— liked to know the new ideas that were being applied to the things they wore. They liked to have them told in a human-interest way. It was advertising, but advertising that carried information every woman wanted, regardless of whether or not she needed a suit or a new coat at the particular time. Of course in season-end and special sales the price reductions and choice values to be obtained were featured.

Hawkins carried the men's-wear section and wrote short, snappy paragraphs about the scarcity of woolen dyes, the necessity of being sure of the clothes that were bought, with the entire idea tied up to the dependability of Mammoth clothes.

Big figures were eliminated, black type was taboo, the pictures carried an interest of their own, aside from their value as an illustration of the article they were advertising. The Mammoth Store advertising became a quiet, easy page that was interesting and readable. It stood out, like a pink shirt at a minister's conference, against the shouting pages of competing houses.

One day the general manager, passing through the store, overheard a customer ask a clerk for the veilings advertised at forty-nine cents a yard.

"Just a moment until I ask the head of stock," said the girl.

The woman got the veiling, but it brought home to the general manager the necessity of bringing the advertising closer to the people who sold the merchandise over the counter. For if this clerk did not know what was being offered in her own department, she certainly would not be able to tell a customer anything about the merchandise that was being offered in other departments. If she had read the advertisement that appeared that day she would have been able not only to supply the veiling immediately, but to suggest that the millinery section on the third floor was offering some new hats, at special prices for that particular day, that would match the veiling very nicely.

Errors and Rewards

The problem was solved after this fashion: Several days later notices were posted in the employees' locker and rest rooms that, beginning the next day, the Mammoth Store would offer one dollar reward to any employee of the store who found any exaggeration or mistake of any kind in the daily advertising—mistakes not only as to prices and spelling but as to typographical errors as well. If taffeta silk was advertised as being thirty-five inches wide, and the clerk knew it to be but thirty-four inches, she had but to fill out a slip and hand a claim to the advertising department for verification, in order to collect her dollar. Red tape was eliminated as much as possible and the reward was paid the same day if possible.

If the error was one of English or typography the advertising department was charged with the dollar. If the mistake was not caught by the buyer when reading proofs, his department was charged with the loss. During the first year five hundred and seventy-six dollars was paid in rewards, but it brought one-thousand-per-cent returns in better-informed salespeople—no longer did clerks inquire about specials in their departments. Mary Jones knew not only what veilings were being advertised but all about the sale of blue-enameled kitchen utensils on the seventh floor. Buyers were more careful in correcting proofs. Mistakes in daily advertising for the first month alone dropped from sixty-seven to thirty-four.

The next step added a new division to the advertising department as the result of the episode of the stenographer and the marriage licenses. The credit department of the Mammoth Store, though highly efficient, was inclined to be very conservative, with the result that it showed a very gratifying absence of losses, and also a very slow growth of new accounts. During the past year eight hundred new accounts had been added to the sixteen thousand active accounts on the books.

Under the new methods a stenographer, instead of idly reading over the marriage licenses each morning, now clips the list from the paper and has the credit department quietly investigate each particular case. If the investigation shows the people to be reliable, the groom to be receives a letter from the Mammoth Store informing him that an account has been opened in his name in the Mammoth Store and inviting him to make use of it at all times.

Later the idea was enlarged to cover such new arrivals in D—— as were noted from time to time in the columns of the newspapers. About three out of four of the persons in whose names accounts had been opened made use of them. During the first eighteen months they purchased merchandise to the extent of eleven thousand dollars. This device made the credit department the best booster in the business.

It Pays to Tell the Truth

Though Friday had always been considered a good day by the retailers of D—— no effort had ever been made to encourage local women to associate Friday with bargains as they associated Monday with washing. Why Friday, rather than any other day of the week, should be considered a day for bargains we couldn't discover, but a survey made in representative sections of D—— disclosed the fact that ninety out of one hundred and seventy women picked Friday, forty of them chose Saturday, nineteen selected Monday, while the rest of them were scattered in their choice among the other days of the week.

"Why not cultivate this inclination?" I asked the buyers at the next weekly meeting.

Out of the discussion that arose Friday bargains were born. Each buyer must contribute two items of merchandise priced close to cost. Only seasonable, dependable merchandise was to be offered for sale. The advertising department described each item tersely and in vigorous word pictures. The articles were set about a large cut that ran through the advertisement. Cuts and headlines were all timely. The presidential election, the arrival of the Deutschland, Thanksgiving, and other timely bits of news furnished ideas that were coupled up with Friday specials.

The first Friday bargain day totaled nineteen thousand dollars as against eleven thousand dollars made on the same Friday of the preceding year. The next week totaled twenty-three thousand dollars. Since then there have been several weeks in which sales exceeded thirty-five thousand dollars, but none ran under twenty thousand dollars. Other merchants, quick to realize the value of capitalizing this quirk of feminine psychology, after it had been pointed out to them, came into the fold with Friday items, Friday specials and many other such inviting headlines. The Friday papers took on an aspect totally foreign to their usual appearance.

As the six months drew to a close other ideas were inaugurated. The Mammoth Store News had become a real news page in every sense of the word. The yearly meeting was held shortly before the expiration of the six months. Jackson Snow handed out miniature balance sheets, showing an increase of one million, one hundred thousand dollars for the year, seven hundred thousand dollars of which were obtained during the last six months of the year. Jackson Snow was right—it pays to tell the truth.

KIRSCHBAUM CLOTHES

ON THE LINEAGE *of a suit* OF CLOTHES

The production of Kirschbaum Clothes involves a process of sifting and gleaning, going straight back to their genesis in raw wool.

And in all the story from *title page* to *finis* not a blot—not a hidden chapter—not a page that is not illumined with a record of prowess and abiding care by spinner, weaver, designer or tailor!

The fabrics are woven of selected stock—and never once does the nimble shuttle shoot a strand of cotton across the warp of the cloth—nothing but *pure wool,* a-tingle with life and color.

The tailoring is done in our famous modern, sun-flooded clothing shops at the Sign of the Cherry Tree.

—where competence and painstaking direct every pair of shears, every flashing needle

—where, from the time the designer's chalk first touches the cloth until the silken label is attached, a wealth of clothes-making artistry is lavished upon each single and individual garment.

Here you have the authentic lineage of Kirschbaum Clothes now being shown for Spring and Summer 1917 by a merchant—usually the one in the ascendant—in almost every American city and town of retail importance.

A copy of our new book illustrating the authentic styles for Spring and Summer, and containing suggestions on the choice of clothes by "The Spectator," will be mailed you upon a postal request.

A. B. KIRSCHBAUM COMPANY

PHILADELPHIA NEW YORK

Black Cat
Reinforced Hosiery

From original drawing by W. B. King

For Correct Attire

SUBSTANTIAL citizens of OUR TOWN believe in wearing the best. That is why you see so many with Black Cat Hose; distinguishable by even, well-woven surface; snug, elastic fit; clear, permanent dyes.

Black Cat provides for both sexes of all ages. It protects the infant's toddling steps—sees boys and girls through the play period, and for grown-ups comes in sheer, pure silk, fine of weave, comfortable and correct.

Back of the style and beauty of Black Cat Hosiery is always the watchword *DURABILITY*—the reinforcements of heel, sole, toe and top that give long life and lasting satisfaction.

Dealers who buy and sell on a basis of *VALUE* carry a full line of Black Cat Hosiery for men, women and children.

MRS. HOPE'S HUSBAND

(Continued from Page 7)

He laid the manuscript gently down. . . . Pauline! . . . Pauline! . . . How he had worked with her! Heart and brain, how he had fought for her! . . . He couldn't help it; damn it, the tears would come. . . . Once he had inspired her—once he had taught her; that was all over. For a while his education and his man's experience had led her; but her technique had soon caught up with her creative talent. Yes; she had caught up with him, too, and passed him on the road. And now apparently she needed him no longer.

Well, even if he had lost her, or was apparently fast losing her, didn't that word "husband" mean at least that he had won her once? Lost! Why lost? Hadn't he lost cases before, in the lower courts, only to win them at last doggedly on appeal? Why, then, shouldn't he demand a retrial in this case, the greatest case of his life, and try to win her back again? But how? His mind began to seek back and forth furiously on the scent, as it often did downtown when he seemed to be beaten. How? How? Was a second romance ever possible between married lovers? Was it? Was it? It seemed absurd; yet the thought stimulated him.

How? How the devil—how? Gazing at the rows and rows of books that lined the walls, wandering, wondering, through "If only" and "There must be some way!" his fancy quested until—he had no idea how long he had been sitting there, scowling, chewing his cigar—he came briskly to himself, apostrophizing the shadowy Winged Victory with the savage exclamation: "Why not?"

Others had done it; why not he? Didn't they still come continually, come by dozens sometimes, those confounded letters, those friendly letters, foolish letters, fulsome, flattering, from unknown correspondents? How interestedly they had both read them at first, discussing the writers, analyzing the characters they revealed! How proud she still was of them too! He smiled. . . . Pauline at her desk, opening her letters complacently, sucking the last drop of praise from every one! . . .

Yes; and she would read his too. Perhaps, though, she might not answer it. A frown. But why not compel her to answer it? A smile of pride. He had invention—many had called him clever; couldn't he play on her curiosity, her passion for romance? After all, Pauline was still a woman, and he was still a man. What were men's wits for, anyway, but to conquer women? And his wits were supposed to be trained in practical psychology; why not prove them? And at least one sharp weapon was left to him; its name was Mystery.

By the Winged Victory of Samothrace, he'd do it! At that moment any woman would say and most men think that Lester Hope was handsome. There was a new strength in the gesture with which he tossed back his black hair. Had Pauline come in upon him at that moment —— But she did not come in.

Of course the letter would have to be typewritten to conceal his identity. A mere detail—that, of course, could be done next day at the office. Let's see: he would give for his address a new post-office box; and he would sign it—what? Long he studied before he chose—"John Irons." Long, long he reflected, more absorbed than ever he had been in a criminal case, smoking on, smoking on, before he had, lawyerwise, decided, with a new smile, upon Pauline's vulnerable point and where the line of least resistance to his flattery lay.

And so, crossing to the bookshelves to turn the pages of her novel thoughtfully, back to his desk with it, lost in his plan, scribbling furiously—walking the floor—sitting down finally to copy all carefully, deliberately, Lester Hope did not realize, until at midnight he heard the front door opening, that for two whole hours he had forgotten he was Mrs. Hope's Husband.

III

IT IS a fact, though some unmarried women may not know it, that trimming a mustache is one of the few small vanities a self-respecting man permits himself to practice before the mirror consciously, seriously and unashamed. Lester Hope, with puckered brow, was trimming his mustache. A knock—a knock at his wife's door. Eight-thirty-five. Ah, her breakfast—and her mail! Smiling, but a little excited, he laid down his scissors. The new trial had begun. Anxiously he awaited Pauline's opening for the defense.

It was not long, however, before her gay soprano—"Lester! Oh, Lester!" brought him strolling into her room, to find her ambushed in laces and ribbons in her four-poster, propped up luxuriously among the pillows. She was drinking her chocolate. Smiling consciously, he waited. Many, many were the witnesses he had cross-examined, and well he knew their carefully careless look. But this time that look was on his own face.

"Say, Lester," she began; "remember what fun we had about all the people who congratulated us on our engagement? Remember Quivin, Les?"

"Why, yes. Heard from Quivin?"

"No. But just think of his saying to you, that time: 'Well, I hope you'll get along well with her!' But that showed that Quivin didn't get along any too well with *his* wife, didn't it? And that snippy Nell Tremlett too!"

"Oh—heard from Nell?"

She shook her head with impatience.

"Don't you know, though, Nell said: 'Well, you'll find it very different, Pauline, after you're married!'—and that told her story. Why, your cousin Ned—no, I haven't heard from Ned, Lester; don't be so nervous!—he was the only one who was apparently happily married. 'Good for you, Les; it's the only way to live!' he said—remember?"

Watching her sharply, he nodded.

"Yes, of course; what of it?"

"Why, only this: each one of them was unconsciously expressing his subconscious mind," said Pauline decidedly. "According to modern psychology one's dominant traits must inevitably come out in one's talk or one's writing. A penurious person—isn't he always talking about money? And a vain person, of people's looks?"

"Yes, my dear." Lester smiled at his cigarette. "Also, the earth is round and slightly flattened at ——"

But his eyes were suddenly attracted by the yellow sheet with which she was now gesticulating. That squarish yellow sheet he had chosen purposely that he might recognize it at a glance.

"See here," she said; "I'd like your opinion of this. I think it's rather clever, myself. It's from one of my latest admirers." Bridling, she turned it over and looked at the signature. "'John Irons'—whoever he is. Listen to this though: Tiny, small, delicate, wee, darling, diminutive, little—and so on. Look at that long list of words, will you? All taken, if you please, from one chapter of my novel. See? Friend Irons infers, from the tendency shown in that unconscious way, that I am fond of little things—toys, carvings and miniatures, and bibelots. Well—that's true enough. Why, he's deduced my whole character, in fact, from my vocabulary!"

Now, as she reread the letter, he wondered for a moment whether he had made any mistake that might have betrayed him. She was chuckling.

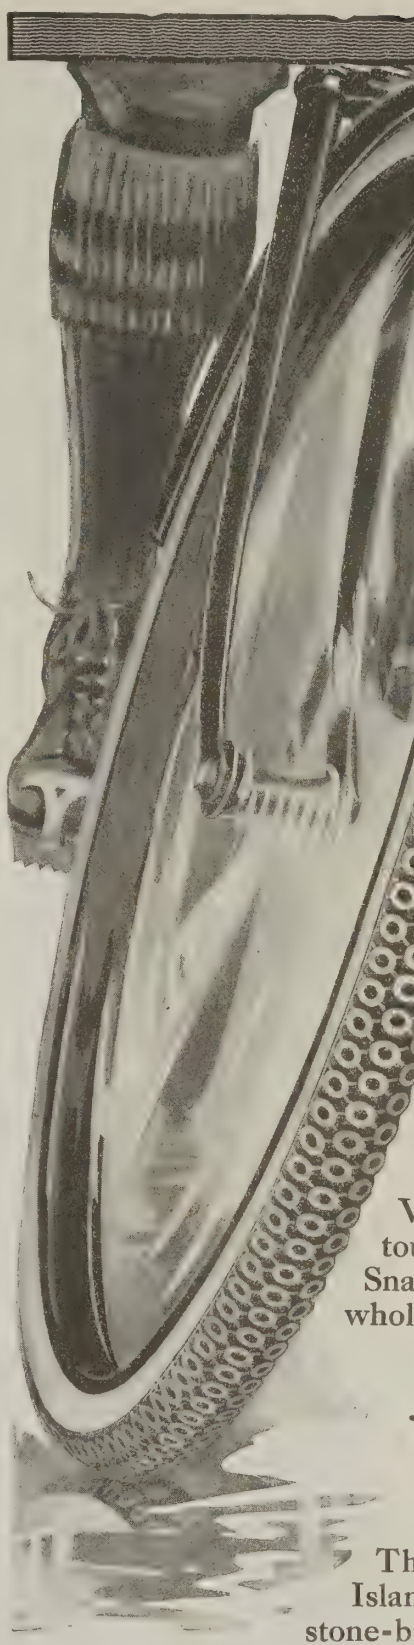
"'Dusky gold!'" she laughed. "Dusky gold! Yes, I remember I was rather pleased at that. 'Opalescent, sheen, velvety-bloom, smoky-red, virginal, gossamer, floaty, filmy, diaphanous'—look!—a whole procession of decorative words like that, marching right down the page. See? And here's what John says in conclusion. Are you listening, Lester? 'An almost pathetic love of beauty; you must have been deprived of pretty things when you were young.' That's right, too; I was, wasn't I? 'Disliking discords in life and art.' H'm! 'Fond of admiration.' Well, who isn't!"

Lester walked to the window to hide his face from her. "What an ass!"

"Oh, I don't know, Les." Her tone now was thoughtful. "'Loyal; though seeming to forget.' I don't see where he got that! But isn't it remarkable?"

"Sounds like the Baconian cipher, to me—picking out words to fit, like that. Why, you could prove almost anything that way!"

"But he happens to prove just exactly the things that are true! Why, he might have known me for years! Of course he's rather complimentary too. He says—where is that?—oh: 'You must be the most charming woman in the world!' You needn't shrug your shoulders, Lester; perhaps I am! But wait a minute." And she



No Fear of Skidding or Spilling

when riding over wet, slippery pavements if your wheel is equipped with Pennsylvania Vacuum Cup Bicycle Tires.

The rider familiar with the skid-preventing power of the famous Vacuum Cups knows he doesn't have to slow up because the pavements are wet and treacherous.

And when he buys Vacuum Cups he gets more than tires—they are our *bond* that they are the highest quality, longest-lasting tires made.

That red tread of three rows of Vacuum Cups gives the finishing touches to any high grade bicycle. Snap and class are added to the whole outfit by

Pennsylvania
VACUUM CUP TIRES

The heavy, tough 15½ oz. Sea Island fabric won't let punctures, stone-bruises, or joy-killers like that come in and spoil your riding pleasure. You just spin along for an entire season without the least bit of trouble.

That's why Vacuum Cup Tires are the *only* tires with thousands of bicycle riders who have given 'em a whirl on their wheels.

USE Carnation Milk

IT blends so thoroughly that it adds a rich, golden color and smooth flavor. Any cup of coffee is improved by its richness.

Carnation Milk is just pure, rich, cows' milk with part of the water removed by evaporation and sterilized to preserve its wholesomeness.

Simply add pure water to reduce the richness as desired. Use it also for your cooking, baking, seasoning vegetables, making desserts, ice cream, candies—for every milk purpose.

Order a few cans today from your grocer. Let your family enjoy its *purity, convenience* and economy. Know that the milk in your home is *safe.*

Write us for "The Story of Carnation Milk," our illustrated booklet, telling the tale of Carnation Milk purity—also contains 100 choice, tested recipes for cooking and making desserts. Address Carnation Milk Products Co., 332 Stuart Bldg., Seattle, U. S. A.

Remember—Your Grocer Has It.

Carnation Milk

The answer to the Pure Milk Question

continued more slowly: "Hopes he 'may develop the acquaintance by some more direct means.'" Her embarrassed laugh did not conceal a serious interest. "What d'you suppose he intends by that? Meet him round the corner—or what? Would you answer him, Les?"

Lester yawned artistically. "Oh, if you feel like it. Lord! I don't know!"

"I don't know—either." As she spoke, abstractedly she kept folding and unfolding the yellow sheet. "I think sometimes you can really tell more about a person from a letter than—why, Lester, if I wanted to get a line on you, d'you know what I'd do? I'd just go away—visit mother or something—and make you write to me. I really believe I'd find out more about you than by living with you for six months!"

And though she drifted off into a description of last night's reception, her husband suspected—beneath her gossip of Mrs. Poppity's latest blunder, and how Smithers wished to dedicate his book of poems "To P. H."—a strong undercurrent of John Irons in her mind, which she seemed to be taking some pains to conceal. That forenoon Lester Hope walked downtown to his office not a little elated.

For three afternoons, each day a little less elated, he walked downtown, only to be disappointed. But on the fourth day when he stopped at the post office, and looked in as usual through the little glass door, behold—a pale-blue envelope! It was addressed to "John Irons, Esq., P. O. Box 1711"—in Pauline's handwriting.

Gingerly he took it out, feeling somewhat as if he were robbing the mail, and tore open the blue envelope. The sensation was, he thought, a bit too like eavesdropping on Pauline to be comfortable. Of course it was for him—that letter; but, at the same time, it wasn't exactly for her husband, was it?

Well, never mind; at a shelf-desk by the big, dirty window, hustled by the crowd, he found himself reading:

"*My dear Mr. John Irons:* I'm so glad to have found at least one careful student of my book. Really, you quite remind one of those patient, laborious old prisoners in medieval dungeons who spent their days counting the number of 'the's' and 'and's' in the Bible. It was almost a pity, though, for you to have wasted so much time on my novel that might have been spent—mightn't it?—at a dollar a palm, with the gypsies."

Pauline went on, in an almost gleeful strain, to fear that she wasn't half so nice as John Irons had made out; and that, really, if she were honest—which, of course, she wasn't—she ought to insert a lot of brittle, magenta, sharp-pointed words into her next novel, just to make his pet theories consistent. In conclusion—the note was short—she wondered Who he was.

There was altogether a dancing note of cordiality and frankness in it that rather surprised him; and a little something about it, also, that he—didn't—quite—like. Just why, he found it hard to decide. What, then, had he anticipated? Wasn't it in just this way, inducing just this charmingly amenable mood, that he had expected to re-win her love? All he knew was that some Imp of the Perverse had touched him with a faint regret that he had succeeded so well. Didn't she, he thought, come almost too easily? The sudden revelation of her as she appeared secretly with a stranger was almost uncomfortable, even though that stranger was himself.

At the office he found, after some search, the last letter he had received from his wife when, two months before, she had gone to visit her mother. It told of the weather; it told of the theaters; it told of the state of her health. Quite a contrast, it seemed to him—her letter to Mrs. Hope's Husband and that flirtatious note to John Irons; but he shook off the thought. After all, since he was John Irons, why not rejoice with John? This was the only way he knew to win her; and win her he must. On with the masquerade! Jumping again into his new mental costume, he sat down to write his reply:

"So you wonder who I am? You will never, never suspect me." He stopped and gazed at his typewriter. Then the keys snapped savagely: "I am far too unimportant, and I am too proud to confess my name. I am not in your set, nor even in the brilliant circle of your acquaintance. We have met, it is true; but I have every reason to believe that you have forgotten me. But, my dear Mrs. Hope, though I have

DEVOE PAINT

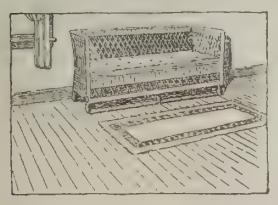
takes fewer gallons and wears longer

Lead and Zinc Paint

Guaranteed 100% pure paint. Therefore it resists time and weather—wears longer. It goes further than ordinary paints—costs less.

Velour Finish

A washable oil paint for walls, ceilings and all interior woodwork. Dries with a soft, velvety finish. Easy to apply. 18 attractive tints.



Marble Floor Finish Varnish

Preserves the natural beauty of wood floors; waterproofs and restores linoleum. Will not show heel marks and resists the wear and tear of dancing. Not affected by leaky radiators.

Read the DEVOE Guarantee Formula on the can. It will tell you why you have fewer gallons to *buy* and fewer gallons to *spread*—when you PAINT DEVOE PAINT.

Pure White Lead, Pure White Zinc and Pure Linseed Oil go further and wear longer than barytes, whiting, silica, china clay or any other so-called "extenders."

That's why the DEVOE dealer in your town makes you this offer:

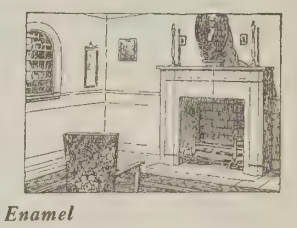
"Paint half your house DEVOE; paint the other half whatever you like. If DEVOE does not wear a year or two years or three years longer—longer and better—we will give you enough to paint again."

DEVOE

The oldest manufacturing concern in the United States. Founded in New York in 1754.

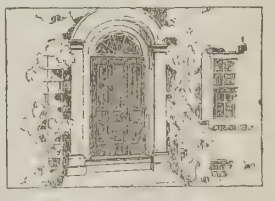
F. W. DEVOE & C. T. RAYNOLDS CO. New York

DEVOE & RAYNOLDS CO. Chicago



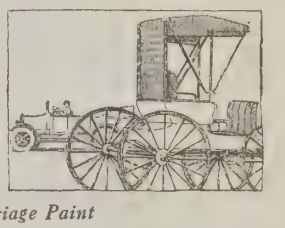
Holland Enamel

For all interior and exterior surfaces where a white porcelain-like finish is desired; not affected by sun or rain. Will not chip or crack. *Stays* white. Can be scrubbed with soap and hot water.



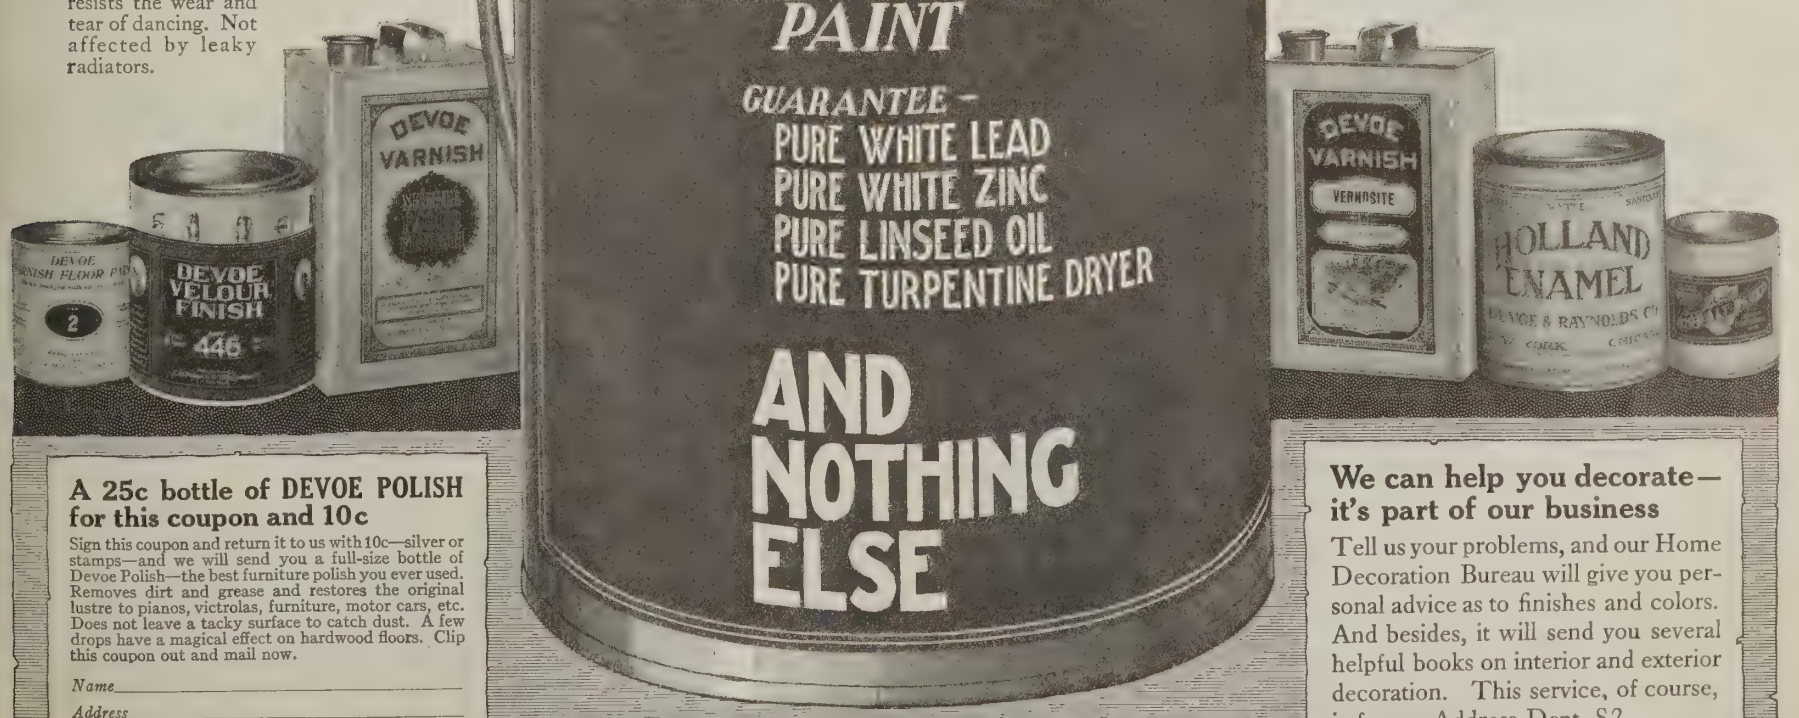
Vernosite—The Long-Life Spar Varnish

Will not blister or turn white. Will protect all exposed work—yachts, front doors and stables.



Gloss Carriage Paint

For carriages, automobiles, porch furniture, go-carts, etc. Gives a durable, high-gloss surface that withstands hard usage. In 10 colors.



A 25c bottle of DEVOE POLISH for this coupon and 10c

Sign this coupon and return it to us with 10c—silver or stamps—and we will send you a full-size bottle of Devoe Polish—the best furniture polish you ever used. Removes dirt and grease and restores the original lustre to pianos, victrolas, furniture, motor cars, etc. Does not leave a tacky surface to catch dust. A few drops have a magical effect on hardwood floors. Clip this coupon out and mail now.

Champion Toledo

Dependable Spark Plugs

The gigantic Ford production is factory equipped with Champion X—they have been standard equipment *since 1911* on over one million three hundred thousand Ford cars.

Champion X plays an important part in the efficient performance of the famous Ford motor.

Champions are scientifically built—and elaborately tested.

They show it by their sterling performance.

Dealers *everywhere* sell Champions—not only for Fords but for *any type of motor*.

There is a Champion specially designed and built for *your* car. Ask for it, and beware of substitutes. Be *sure* the name "Champion" is *on the porcelain*, not merely on the box.

Champion Spark Plug Company, Toledo, Ohio

(Continued from Page 66)

only just summoned courage to write to you, I have long, long admired you. And yet, bright star as I see you, don't think me dazzled or afraid. I know your faults as well as your virtues. You have no greater friend or severer critic—and remember that I am watching you all the time, in the dark!"

He continued in as spirited and daring a vein as he thought he might without frightening her away. Experience had taught him that when a woman is to be won she must be won quickly, while the game is new and exciting.

That night they had pork chops for dinner. Pauline asked whether the coal had been ordered and the milk bill paid. She spent most of the evening in deciding which photograph, from a set of proofs, would be most effective in advertising a holiday edition of her novel.

Her next letter, because of two sly little words, amused him:

"Aren't you forcing this a little?" came her mild protest. "As a reader of character I admit you are rather good, though, I fear, superficial. I have an idea, however, that I might perhaps do as well myself; but I haven't enough data, as yet, in your vocabulary to be able to deduce your character and decide whether or not I care to continue the correspondence."

"As yet!" Business forgotten, the telephone unanswered, in his office he thoughtfully rubbed his chin and smiled at those two words; then frowned. "I haven't enough data—as yet!" Why, couched though it was, woman-fashion, in the guise of a rebuke, wasn't it virtually an invitation to continue? Yes; she was distinctly encouraging. The battle was on.

And daily, as it raged—for they now wrote daily—there was at home apparently never anything more between them than a dinner table or the upstairs hall! Friends, partners, mates, roast beef and the Evening Tribune—plus invisible clandestine romance!

With every surreptitious glance he stole at her as she read or wrote or sang, he wondered what name to give to the domestic drama—Comedy or Tragedy?

Never before, possibly, had his office typewriting machine transcribed such jaunty messages as during these weeks when, evening after evening, he lighted the electric lamp and sat down alone to write to Pauline. Those stiff old wires and springs, habituated to "Yours of the eighteenth at hand" and "The party of the first part," must have felt an unaccustomed thrill as they jumped and rattled to the elastic words: "If I could be near you, and see you and hear you, I'd probably fear you too much to confess what now I'm implying—at least I am trying, and also relying on you, too, to guess!"

So, shrewdly he eschewed the sentimental note. At lovers' fond perjuries, they say, Jove laughs; but Minerva—yes, and all Olympus—will abet a courtship where grace and humor woo.

Hard work enough it was, too, with his wife drifting, drifting away, to force himself to the blithe pristine note of his early sweethearting; but he succeeded. He was sure of that when she responded a little more promptly than before, and quite in his own vein. How long, oh, how long it had been since his wife had written verses to him!

So nibble, nibble, nibble—and his fish was almost on the hook. His romantic bait had been just the thing for her fancy. At home Pauline had casually mentioned the John Irons letters occasionally, as they came, with a touch of amusement.

"Want to see it, Lester?" she would say carelessly as she skirmished through the magazines for a February number containing her picture.

He displayed only the lukewarm interest of a sleepy spouse:

"Oh, I guess not now—thanks; I'd like to finish this article I'm reading."

Show him her letters, would she? It was a harmless Platonic game, then—a family affair! He had no idea of carrying on a mere practical joke; his object was serious—to re-win her love, no less. So now if he were to land her, so to speak, it was time for a quick jerk on the line. He decided to try to write her so warm, so private a letter that, though she might accept it from an unknown admirer, she would not quite care, or even dare, to show it to her husband.

For this, a new touch of romance. And if there are still those who think a typewritten letter cannot breathe romance, they should have watched Pauline Hope—as, through her half-opened door, Lester himself one morning shamelessly watched her—studying his ardent lines.

"Always I shall think of you as once I saw you—in golden silk and pearls," he had written. "You were surrounded by admirers, and I could not, would not force myself on your notice; though I watched you all the evening! But to-day I saw you almost more radiant on the street—with your husband. Yes; and I was, for a moment, very near you—I might have touched your hand! And I knew, then, that I loved you! You wore no flowers, I am sure; and yet when you passed I swear I smelt violets!"

Ah! Love unadorned is common enough; but robed in mystery—mystery and mischief! Little wonder the situation caught her novelist's fancy. Yet, tapping away at the prosaic keys of his typewriter, it never occurred to Lester Hope to wonder which, after all, was the more romantic figure—his picturesque John Irons of fiction, following her dramatically in secret, or Mrs. Hope's Husband of fact, in blue worsted, in shirtsleeves and green eyeshade, alone in his office after his clerks had gone, only the one desk lamp lighted, trying mercilessly to divide himself in twain and pit one against the other in the fight for Pauline.

It was the pile of unopened letters that lay on her flowery-fragrant breakfast table next morning that gave him his real result; among them he spied no square yellow envelope. Yet a square yellow envelope certainly had been on the tray when the mail was brought up to her—he had assured himself of that when the maid passed him on the stairs.

Pauline rose, and Pauline dressed. Down the curly staircase, clad all in white, she came a-singing. A joyous kiss she threw—at Willyer's portrait of herself in the library. She scolded the dog, petted the cat, ordered veal cutlets for luncheon, talking gayly all the time.

The creaming and sugaring of her oatmeal, however, seemed to require more concentration.

In silence she took a few dainty spoonfuls. Then, thoughtfully:

"Lester, d'you recall when I wore that yellow silk evening gown of mine last? At the Woodlings', wasn't it? You were there that night, at that first reception she gave for me, weren't you?"

"Why, yes," he said. "What about it?"

"Oh, nothing!" She looked up, caught his eye, suddenly looked down again. "I was just wondering if—if I'd dare to wear it there again—that's all." A pause. "Say, Lester; d'you remember who was there that night? Now, don't be sarcastic—I mean, was there anyone there—well, that we knew, but hadn't seen for a long time, for instance? Nobody of any importance, of course. Almost a stranger, you might say."

He appeared not to notice any hidden motive in her query; and, with the stupidity of a doting, unsuspicious husband, he answered only:

"No. Why?"

"Oh, I was only trying to think of—of whom to invite to ——"

Pauline dwindled off, and for a time there were no sounds but the delicate click of her spoon against the plate and the rustling of his newspaper.

"Say, Les; you know when we were walking downtown yesterday morning? You don't recall seeing anyone particular, do you? Anyone you knew?"

"Nobody but the postman."

"That's funny!" Pauline murmured.

Yes; it was rather funny, thought Lester; but he didn't say so.

Over the top of his newspaper he watched guardedly as she tasted her porridge, waiting for her to mention John Irons. Never a word more did Pauline say.

But, when it came to it, why should she? Happy as their married life had been, it was not established upon the theory of a private ownership of one by the other. They were both tacitly free to give or withhold their confidence. But one significant thing he did notice—that Pauline's farewell kiss was just a bit more clinging than usual. Wasn't her conscience troubling her a little? he wondered.

And by just that extra amount of fervor in the demonstration, he suspected, Lester Hope had fallen and John Irons had risen in the scales of her affection.

"Radiolite" Strap Watch

YOU see at the top of this advertisement a photograph of the Ingersoll "Radiolite" watch as it looks in the dark. Its hands and figures glow brightly, the figures being made of a new self-luminous substance and the hands layered with the same substance.

What does "self-luminous" mean?

"Self-luminous" means that the light comes from *within.* Merely phosphorescent substances borrow their luminosity from outside light, i. e., they glow for a few hours (at most) after exposure to outside light. But "Radiolite" supplies its own illumination. There's *radium* in it.

Millions of little batteries

Every particle of radium is like a little battery, in that it sends out energy in every direction. This radium—in infinitesimal quantities—is imprisoned within the crystals of another substance, made of twelve different minerals. And the radium makes this other substance glow, just as electricity makes the filament of an electric light glow.

This crystalline substance is the most responsive of all substances to the action of radium. So this microscopic amount of radium keeps it glowing with a brilliancy that remains undimmed for at least ten years—probably much longer.

Ingersoll

RADIOLITE WATCHES

There are five models of Ingersoll "Radiolite" watches. There is one for every person and for every purpose. In the country or city, motoring or walking at night; boating or camping; in the darkened theatre; or in the bedroom at home, people find them useful. Nearly one-third of the Ingersolls now sold are "Radiolites."

All these Ingersolls also come with plain dial; and there are other plain dial models, from $1.50 to $6.00. At all dealers; or if the dealer has not the model you want, it will be sent on receipt of price by any one of our three branches named below.

ROBT. H. INGERSOLL & BRO.

New York Chicago San Francisco

"White House Model"
Price, $495

—easy to play

Gulbransen-Dickinson Co.
Player Pianos

Nationally Priced

Throughout the United States, Gulbransen-Dickinson Co. Player Pianos are priced uniformly, as follows:

"White House" Model	$495
"Country Seat" Model	445
"Town House" Model	395
"Suburban" Model	375
"Duolectra" (Electro-manual Reproducing Piano)	700

These are *the known values* in Player Pianos. They form a reliable *price standard.*

Most Players are *locally* priced. In six towns they often sell at six different prices.

You may judge locally priced Players by the Gulbransen-Dickinson Co. price standard. Ask yourself, "Is the So-and-So Player worth more than the Gulbransen-Dickinson Co. Player?" Or, "Is it worth as much?"

Therefore, get acquainted with Gulbransen-Dickinson Co.'s nationally priced Players *first.* They probably are on sale in your town.

See them—hear them—play them yourself—before examining locally priced Players. Then you will be able to judge.

Send us your name and address (a letter isn't necessary) and we will mail you without charge our Art Catalog, name of nearest Distributor, and—if your card is received before our limited supply is gone—a copy of Charles Klauber's work on "How to Judge a Player Piano."

Gulbransen-Dickinson Co.
3234–60 W. Chicago Ave., CHICAGO

NOTE—We are perhaps the largest makers of complete Player Pianos in the world. G.-D. Co. Players are built under the famous Gulbransen patents; *also* under the active direction of A. G. Gulbransen himself (pronounced Gul-bran-sen).

REMINDER

Please tear this out now as a reminder to write your name and address (on the margin below if you wish) and mail it to GULBRANSEN-DICKINSON CO., 3234–60 W. Chicago Avenue, Chicago, for Art Catalog, etc.

THE FORTUNE MAKER

(Continued from Page 23)

without respect for Smiley, either, as one may show respect for suffering that he cannot alleviate by passing it, rather than idly staring at it.

But that afternoon, being in the president's room, he spoke of it at the first opportunity.

"Smiley Carter's out there in the shop, grinding crankshafts," he said.

"Smiley Carter! The devil!" John exclaimed, surprised in his turn. He pondered a moment, with a faint amusement. "Wonder where he's been! Guess I'll look him up sometime."

Of course to him, too, Smiley was remote; in fact, he forgot him for three days. Then, going through the shops, he, too, came on his old companion. Instantly he stepped up and held out his hand, saying:

"Why, hello, Smiley! How are you?"

Smiley took the extended hand, looking into his employer's handsome, smiling face with a dumb kind of questioning.

"My name's Waggoner here," he said.

IV

ONE day, late in November of 1907, three men sat in the office of the president of the Sarum Motor Company. This was the old office that the wagon company had used, on the top floor of the frame building which afterward burned. It was by no means so spacious or handsome as John Turner's later quarters; still, it was of good size, with windows on two sides. John sat behind the big desk, which commanded the room.

He was only thirty-two then, not quite so heavy as he became later, but a powerful figure, broad-shouldered and deep-chested, with a round, full column of a neck. Latterly his clothes had been made by the most expensive tailor he could find in Chicago; and to one with an eye for such things they looked it—quiet and rich, with never a sag or pull or wrinkle in them where a wrinkle should not have been; fitting perfectly, with just enough unusualness to tell an expert what sort of shop they came from. He was always a dandy—just to the point of being perfectly right without throwing it in the beholder's face.

Success had ripened his ever-sturdy self-confidence. Nowadays he spoke usually in a low, even voice, and hardly ever made a motion that was not necessary. A gesture of any sort was rare with him. Once in a while, especially if he was getting a bit bored, he would thrust his thumbs into his vest pockets or twist his watch chain round his forefinger or pick up a blotter and softly tap the desk with the edge of it. When he rubbed the side of his nose with his finger it was a sign of nervous disturbance.

By that time those who came much in contact with him had learned all the signs. John rather liked to have the signs known. It pleased him when a man cut his talk short because the president rubbed his nose. Just now he sat squarely upright in his chair, with his two hands resting on the edge of the desk, perfectly still, his rather heavy-lidded eyes never moving.

Walter Hayes sat over in a big chair by the window, humped forward, his elbows on the arms of the chair, his hands in front of his chin—one of them balled into a fist, the other clasping it. He had grown a little mustache, reddish like his hair and trimmed close, showing the red, bent line of his lips under it. The lips were slightly apart now and his blue eyes were fixed on the third man.

The third man wore a mechanic's blouse and overalls, stained and patched. His thin face had no color; the skin was ashen and dead-looking. He sat on the edge of the chair as though embarrassed, his hands on his knees. His brows were puckered and one side of his mouth twitched slightly as he peered at John Turner—pathetically like a wistful dog that half expects a kick. He spoke with a slight hoarseness, now and then coughing slightly behind his hand or moistening his lips with his tongue.

"When they arrested me back there in Planters' Grove I didn't think it was anything serious," he was saying. "When I found out you and the girl had left I supposed, of course, you'd ditched me. I was stuck on that girl, you know. I didn't care much what happened to me. I wouldn't tell 'em where I'd come from or anything else. I told 'em to go to hell!"

He moistened his lips and moved his feet a trifle.

"They appointed an old stiff named Eckert to defend me. He didn't do anything for me at all—just threw the hook into me. You remember, maybe, a man had been shot by a burglar—a grocer there. The town was raw over that. They all wanted to soak somebody and I was the goat. This stiff, Eckert, was a friend of the grocer. He wanted to soak me too."

He glanced round the office, so obviously the seat of power, and at Walter Hayes, so obviously prosperous. When his eyes came back to the figure behind the desk he grinned faintly.

"Hardly looks now as though we three had been gay little partners taking potluck together only a dozen years ago! Probably you fellows have had more variety and excitement in your lives since then; so it's sort of faded out of your recollection. They fixed it up for me so recollecting was the best thing I had to do.

"I didn't realize what I was up against back there until it was too late to do anything. I was nutty about the girl. I thought you and she had ditched me. Naturally it jolted me. I just crawled back in my shell; wouldn't open my head except to stick to my story about finding the pocketbook, which was true. It's beautiful to have the truth on your side, and the police and the court and everybody else against you. That's simply lovely! Try it sometime if you want a sensation. I thought the most they could do to me was to prove that I'd found a pocketbook with some money in it, and kept it. That didn't look very serious. I was too sore to care much—until it was too late to do anything.

"You remember that farmer was stewed to the gills. He could just keep on his pins when he dropped the pocketbook and went out the back door into the yard behind the hotel. His horses were hitched in a shed out there and he was going to get 'em. Of course I followed him out the back door—to pick up the pocketbook. Well, he staggered out to the shed there and must have bumped his head against a plank or something. It cut a gash over his eye and sort of stunned him.

"By and by a hostler found him reeling round there with his face all bloody, and the drunken fool said somebody had hit him. Well, then they found his pocketbook was gone. Of course the bartender had seen me follow him out after he'd flourished his wallet round. So they said I'd hit him and taken the pocketbook away from him. This old stiff, Eckert, who pretended to defend me, didn't really do anything at all. Of course he thought I was guilty and was sore over the grocer being croaked."

Smiley glanced over at Walter and back at John, wetting his lips, a bitter gleam in his gray-green eyes; but he continued quietly enough:

"So the charge against me was highway robbery. Ten years in the stir—that's the little prize package they handed Smiley Carter at twenty-one years of age! The kind judge observed that only my youth prevented him from soaking me harder. I've always thought that was nice of him, considering I was innocent."

Walter Hayes looked round at John.

"But why didn't you let us know?" John asked, forgetting the circumstances.

"You neglected to leave an address," Smiley replied dryly. "I thought you'd ditched me—with the girl, anyway. I just turned into a dumb brute. I had so much hate and despair on my hands that I couldn't attend to anything else. For quite a spell the only nice, soothing thing I could think of was to get out somehow and lay hands on Eckert and that judge, and take 'em apart without undue haste. If I could have taken all the things apart that I wanted to those days I suppose there wouldn't have been much left of the world but a sort of muddy puddle. I admit there's nothing to be gained by feeling that way."

He paused a moment, sighed and coughed slightly.

"Well, I might have got out in about six years with good time off. A penitentiary is a great little place to jolly a man along with something good coming in about six years and all hands giving him the boot meanwhile. Probably you've read enough about it without my going into details. There was a plot to escape. Anything looked good enough to me by that time. I went into it. A guard had his head smashed.

(Continued on Page 73)

Women Need This Great Cooking Convenience

You women have long needed the remarkable Cooking conveniences afforded by this great 3-fuel Universal Combination Range. Just think of it! This range burns *gas* for speed and convenience—and *coal* for incomparable baking results—and is so arranged that *both* gas and coal (or wood) can be used together or separately! Yet it is so simple and so safe that a child can operate it!

Automatic Fuel Control. A Twist of the Wrist Changes from Gas to Coal and Vice Versa.

Universal Combination Range

"A Twist of the Wrist" Changes From Coal to Gas

No cumbersome parts to shift—no oven racks to move—no makeshift folding contraptions to manipulate.

To use gas for the oven just turn the key (see illustration) and the oven is ready *for gas*. A reverse turn and it is again ready for coal. And absolutely

No Parts to Change

Really gives you two stoves in one at one price. Saves kitchen space, worry, time and inconvenience.

Keeps Your Kitchen Cool in Summer and Warm in Winter

Eliminates extra work—saves fuel—helps make good cooks better—has every needed facility and convenience.

Compact—complete—trouble-proof—fully patented. The crowning achievement of 50 years of leadership, yet moderately priced.

Has four coal lids and four gas burners all on top; a full size 18-inch oven fitted with gas burner; a spring-balanced oven door and oven thermometer, sanitary features, etc.

Handsomely trimmed in rust-proof silver nickel. Finished in baked-in, sanitary blue or black porcelain enamel, if desired. No blackening—easy to clean with soap and water.

Sold for cash or on easy payments by leading merchants everywhere. Guaranteed by them and by us. See it demonstrated!

Write Us for Free Book!

—fully illustrating and fully describing this range. A book of remarkable interest—one that every woman eager to lessen her kitchen labors and cooking expense should READ. It's *FREE*. With book goes name of your Cribben & Sexton dealer who'll give demonstration. Write TODAY.

CRIBBEN & SEXTON COMPANY, 502–702 No. Sacramento Blvd., Chicago, Ill.

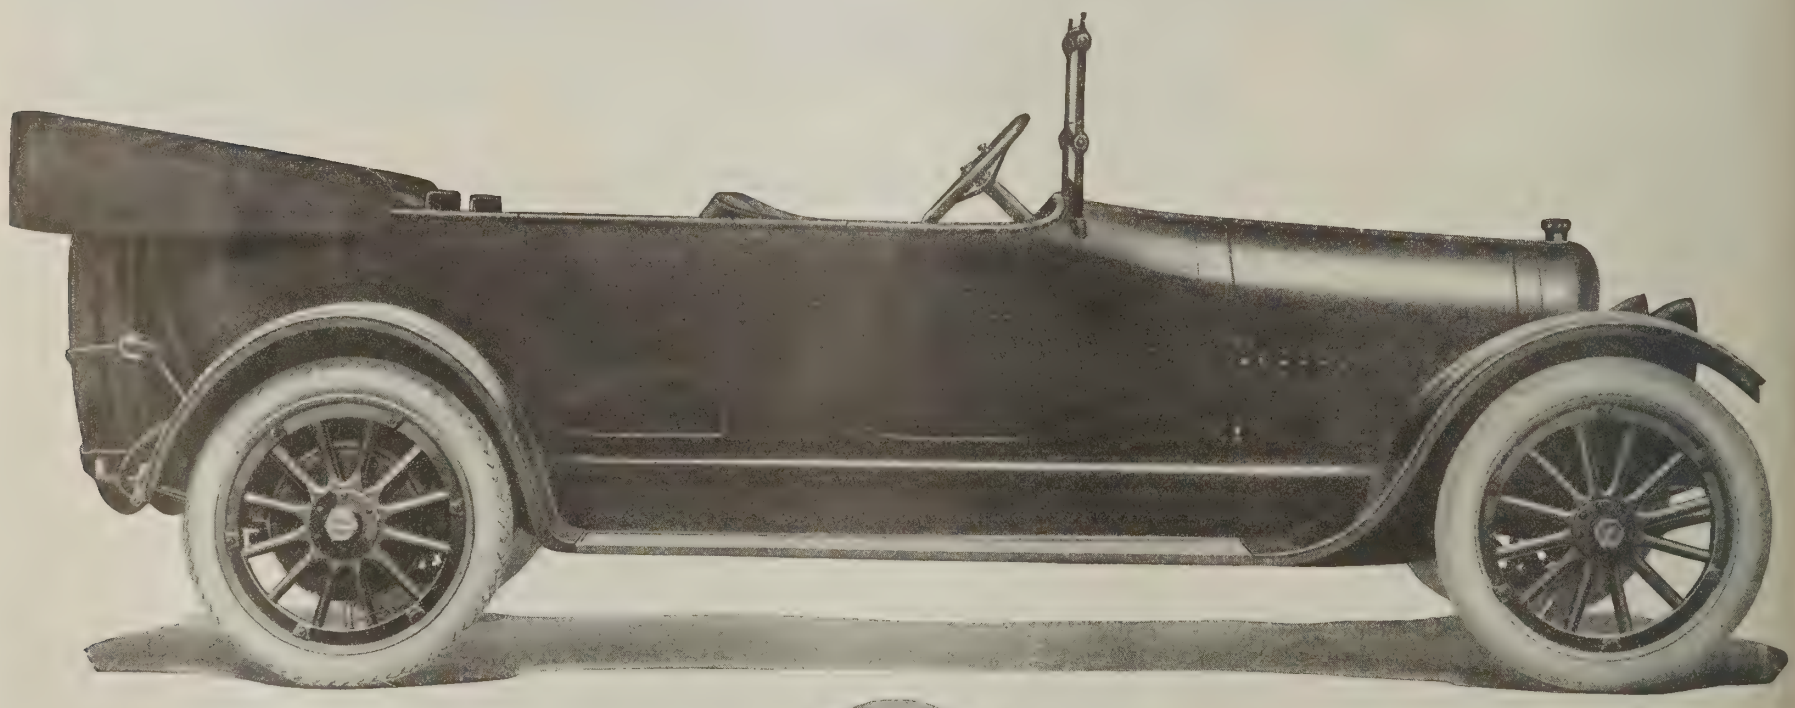
STOVES · RANGES · FURNACES

The Quality Line

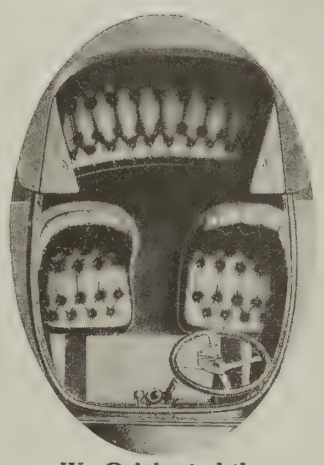
The thing that folks call power

PERFORMANCE

is a dominant characteristic of this Apperson Eight. Giant hills are its daily bread. Agile as a cat on the getaway, it rises to sixty an hour or better with the ease and grace of an aëroplane. Strolling along in traffic, at 1½ to 2 miles an hour on high, gear-shifting becomes almost a forgotten art. Friend alike to smooth thoroughfare and rough-hewn highway, *find* the car that will outperform this Apperson Roadaplane.



To *do* things a car must *have* things. The V-type motor, the perfectly poised crank-shaft, the accurate balancing of pistons and connecting rods, the light weight (3000 pounds), the long, hammock-swung rear springs—these all contribute to the amazing performance of the Apperson, and to its remarkable riding comfort, comparable only with the aëroplane. A big, beautiful car—130-inch wheelbase; seven, five and four passenger (Chummy Roadster) bodies, $2000. The Apperson Six, $1690 to $1750.



We Originated the "Chummy" Roadster Body

Dealers: Performance is the first thing your customer wants to know about. The Apperson *has* and *does* the things he wants to buy. There is an additional advantage in handling the Apperson in the fact that you can furnish him with either an Eight or a Six to meet his personal preference. Write for the details of our dealer agreement.

APPERSON BROTHERS AUTOMOBILE COMPANY, KOKOMO, IND., U. S. A.

APPERSON

Radium! Has a new job!

Now it's to serve as a *light*—a *pilot* light!

Not a light for illuminating, but a soft, mellow glow to enable you to locate objects in the dark—your keyhole, button on your door-bell, electric switch buttons in your hall, bedroom, bathroom, nursery or library; suspended lights you now "paw the air" to find; medicine bottles, night drinking glass or carafe; push button of your flashlight—even the time on your alarm clock!

MARVELITE
is made with real Radium

mixed with zinc sulphide and other ingredients. The glow is gentle, inconspicuous, entirely unannoying to the eyes of a sleeper, yet distinct enough to be plainly visible in blackest darkness, doing away with "fumbling around." The Schlesinger Radium Company, owning and operating the largest Radium-ore mines in America, with the most extensive research laboratories, have worked two years and made over three hundred experiments to perfect a *genuinely* "radio-luminous" material in a form and at a cost practical for *general* use. The final successful result is

MARVELITE
pressed into small buttons.

These buttons, containing real Radium, will glow with full strength hundreds of years—the light that never fails! Wholly distinct from the old-style phosphorescents; equally distinct from more recent products using distortions of the word Radium. MARVELITE buttons are *genuinely* "radio-luminous" in the full sense of the words, and will photograph objects through opaque paper—"radiographs" that absolutely prove the presence of real Radium.

MARVELITE
buttons mailed anywhere

in the United States at the prices below. Be sure to order by set number.

No. 1. COMPLETE UTILITY SET including three large-size buttons, with special screw attachment for switch plates; five medium-size general purpose buttons suitable for any surface; one extra brilliant button for outside keyholes; one set of eleven very small dots and pair of hand-bars for alarm clocks. Adhesive. Complete, $5.

No. 2. SPECIAL SWITCH-PLATE SET of two large-size buttons with special equipment for screwing them into switch-plates permanently in one minute's time. $1.

No. 3. SPECIAL UTILITY SET of three medium-size buttons suitable for any purpose and any surface, with tube of adhesive. $1.

No. 4. SPECIAL ALARM CLOCK SET of eleven very small buttons and two hand-bars; applicable to any ordinary alarm clock and rendering its time readable in the blackest darkness. $1.

No. 5. KEYHOLE BUTTON, extra brilliant, with tube of adhesive. $1.

Every button absolutely guaranteed to contain real Radium as the sole source of its luminosity; radiograph tests invited.

Order today. Be the first in your neighborhood to have this wonderful new convenience.

(MANUFACTURERS' inquiries invited. We supply discs, stars, pointers, figures, letters, any size, with suggestions for attaching. Taylor barometers, Ainsworth surveying instruments, U. S. Navy and Signal Corps already among regular users of MARVELITE. Send your catalog for suggestions.)

(Continued from Page 70)

One of the men got shot. I got an iron bar over my kneecap that's made me lame ever since. And I served my full ten years. I got out two years ago." He hesitated a moment and added with a faint grin: "Well, you can see where I am now."

"Anything against you in the two years, Smiley?" John Turner asked plumply.

"Sure!" Smiley replied promptly. "Why wouldn't there? They'll always have something against you if you're down. An old duffer was robbed in New Orleans. It's no more true I did it than it's true I slugged the farmer. But I'm not banking very much on the truth myself. I tramped it up here. They'd taught me something of a trade in the penitentiary. I heard this shop was grabbing men from anywhere it could get 'em; so I landed a job here. Of course I heard the name John Turner as president of the concern, but I had no idea it was you."

He peered hard at John a moment, the side of his face twitching; then he said quite simply:

"I'd be obliged for an easier job. The one I've got is all right enough," he added, coughing—"only the work's too heavy for me. They've got my goat right enough."

John Turner put his thumbs in his vest pockets.

"Hard luck, old man!" he said. "Got any money?"

"No," said Smiley. "I've only been paid once and had to go to a doctor."

From one vest pocket John extracted a roll of bills. He glanced at them to see about how much there was; then held them out.

"Get yourself a good suit of clothes and come here at half past ten to-morrow morning. I will give you an easier job," he said.

That is how the man known as Waggoner came to be in John's anteroom—at first only as a sort of more or less superfluous doortender, messenger and valet.

It wasn't very long—in that more genial atmosphere—before he began, so to speak, to thaw and get the paralyzing chill out of his blood. He soon got used to good clothes, good fare, a comfortable lodging—more than all, to a sense of security and of some importance in the world. His looks improved and he took on some flesh. Gradually he recovered his knack of mimicry and a good deal of his droll humor. He could tell a story that was sure to bring a laugh.

Gradually, too, he moved closer to John personally. John had a kind of sentimental proprietorship in him; found him a relief from business; at length had him to dinner now and then, or took him on the trips that grew more frequent as the business expanded and John's weight in the world increased. He came to be looked upon as a kind of unofficial representative of the president in various personal ways, which naturally brought him considerable deference. Though he never had any official or formally recognized position in the organization, he had, in fact, decidedly more influence with the president than John was aware of, for it was always exerted indirectly. Smiley became an adept in the art of flattery.

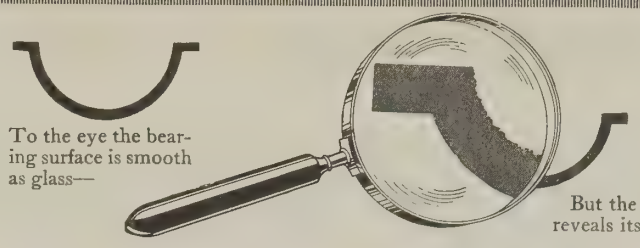
Soon after Smiley's discovery another person began to play a more important part in John's life than John was really aware of. That was Callahan. When the Sarum Motor Company was formed Callahan had just been made foreman of one of the shops—a burly man in the middle thirties, with a great, broad, red, snub-nosed face. His ears were so tight to his head that they seemed embedded in the flesh round them, and there was a bold twinkle in his blue eyes. His hands and feet were huge. He had pushed his way up from the most unpromising beginnings; never learned to speak grammatically or quite lost a touch of brogue.

A workman sued the company for damages, alleging he had been assaulted and nearly killed by Foreman Callahan. The case looked rather bad. The man had broken the rules against smoking on the premises, it being his second offense; whereupon the foreman had taken him in hand with such vigor that he was in the hospital several days.

John frowned when Superintendent McGregor reported the facts to him.

"We can't have a bruiser like that round here," he said. "I guess we'd better fire him."

"He's a first-rate foreman—Callahan is," Sandy replied, being loath to lose a first-rate foreman. "None better in the plant. I hate to let him go."



WORN BEARINGS
What do they mean?

THE repair man says: "That knock? Worn bearings." Tightening will temporarily remedy the trouble. Refitting or renewing is the only permanent remedy. But it is more important to know what will help prevent this expensive operation.

To the eye, the surface of a bearing is smooth. But under the microscope it has a very different appearance. You see a succession of little hills and valleys.

Now, imagine the engine in motion.

What happens?

Surfaces are in motion. Unless protected by a correct film of lubricating oil, the microscopic hills of metal meet and rub. The engine-power overcomes this resistance, but tiny particles of metal grind off.

By degrees the snug fit becomes a loose fit. Noise follows. To correct this condition now, the bearings must be refitted or renewed.

The only protection against undue wear of bearings is the thin film of oil.

This thin film of oil must be highly elastic. It must fill-in the valleys. It must cushion the peaks and withstand pressure. It must stand up under the heat of service. These requirements call for oil of the very highest quality and of the correct body and character.

Gargoyle Mobiloils meet these requirements with scientific exactness. Used as specified in the Chart of Recommendations they effectively cushion the bearing surfaces, and meet the most severe demands of service and heat.

GARGOYLE

Mobiloils
A grade for each type of motor

In buying Gargoyle Mobiloils from your dealer, it is safest to purchase in original packages. Look for the red Gargoyle on the container. If the dealer has not the grade specified for your car, kindly write our nearest branch, giving dealer's name and address.

VACUUM OIL COMPANY
Rochester, N. Y., U. S. A.

Specialists in the manufacture of high-grade lubricants for every class of machinery. Obtainable everywhere in the world.

Domestic Branches:

Detroit	Chicago	Minneapolis
Boston	Philadelphia	Pittsburgh
New York	Indianapolis	Des Moines
Kansas City, Kan.		

Correct Automobile Lubrication

Explanation: —The four grades of Gargoyle Mobiloils, for engine lubrication, purified to remove free carbon, are:

Gargoyle Mobiloil "A"
Gargoyle Mobiloil "B"
Gargoyle Mobiloil "E"
Gargoyle Mobiloil "Arctic"

In the Chart below, the letter opposite the car indicates the grade of Gargoyle Mobiloils that should be used. For example, "A" means Gargoyle Mobiloil "A," "Arc." means Gargoyle Mobiloil "Arctic," etc. The recommendations cover all models of both pleasure and commercial vehicles unless otherwise noted.

Electric Vehicles: For motor bearings and enclosed chains use Gargoyle Mobiloil "A" the year 'round. For open chains and differential use Gargoyle Mobiloil "C" the year 'round.

Exception: For *winter lubrication* of pleasure cars use Gargoyle Mobiloil "Arctic" for worm drive and Gargoyle Mobiloil "A" for bevel gear drive.

HOW do you know the breeze is off the sea?

"Your Nose Knows"

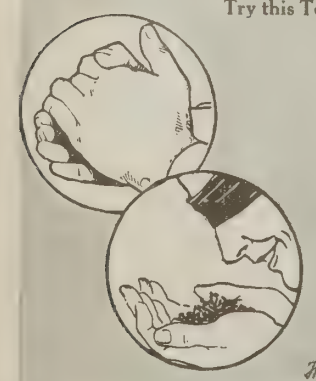
By the bracing fragrance in the air. How it quickens you! Puts zip into your step! Makes you want to do things! Fragrance is Nature's most intimate appeal. You follow it without question. Follow your unerring sense of *pure fragrance* in the choice of your tobacco and smoking will delight and satisfy you wholly. "Your Nose Knows."

Pure fragrance will always lead you to

Tuxedo

The Perfect Tobacco

Made as it is from the sunshine tips of the best tobacco leaf grown in the Blue Grass Region of Old Kentucky, ripened, mellowed and carefully blended, Tuxedo has a *pure fragrance* all its own. "Your Nose Knows."

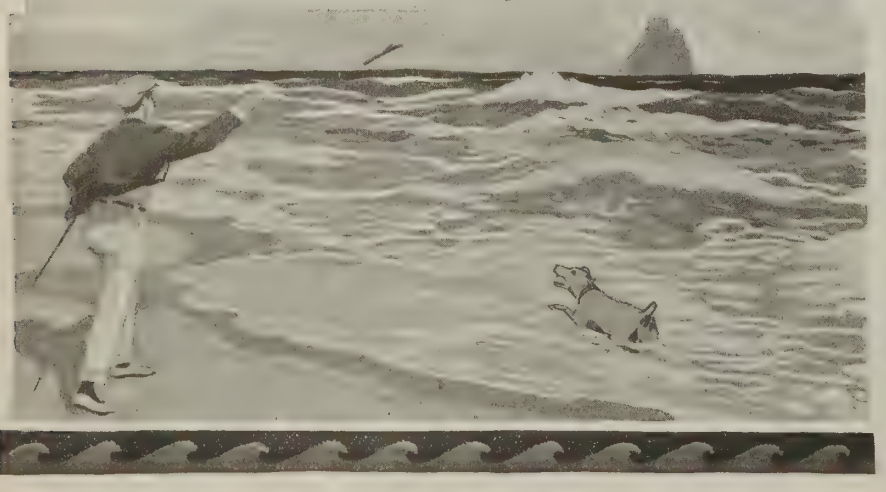


Try this Test:—Rub a little Tuxedo briskly in the palm of your hand to bring out its full aroma. Then smell it deep—its delicious, *pure fragrance* will convince you. Try this test with any other tobacco and we will let Tuxedo stand or fall on your judgment—

"Your Nose Knows"

Guaranteed by The American Tobacco Co.

5 cent BAGS—10 cent TINS
HALF and FULL POUND GLASS HUMIDORS



So John had the culprit up before him.

"What did you beat that man up for?" he demanded, frowning at the big red face.

"Lord, Mr. Turner, I never beat him up at all!" Callahan replied with injured innocence. "I'd warned him about smoking before; so when I caught him at it again I just give him a bit of a shove with me hand and a mite of a push with me foot."

He said it so candidly and unabashed that John, looking at the huge hands and feet, laughed in spite of himself. That was the beginning of his particularly noticing Callahan.

The foreman was not reticent with his big hands and feet. He believed in the simplest, most direct methods. If a workman broke the rules he couldn't see the sense in resorting to official red tape in the form of complaints, reprimands, fines, and so on, when it was much easier and more effective to give the man a cuff. In fact, rules were almost never broken in his whereabouts. Later on he chased a couple of state factory inspectors out of his shop for interfering with the work.

"Lord, Mr. Turner," he said, when called to account, "I'm taking orders from you about what's to be done in the shop—not from them guys!" Which also tickled John.

Partially civilizing Callahan was something of a task, but worth while; for he was tremendously effective. On the whole, he got on with the men well, and wherever he touched the job it speeded up. He never understood scruples of any kind further than to have a hearty contempt for them. He thought John Turner a great man and knew how to show it. There was a kind of implication that if John wanted him to blow up the plant, or go out and knock somebody's head off, he would do it instantly; and that secretly pleased John. He liked having that great chunk of raw force devoted to him—maybe something the way Indian potentates like elephants in their train. It fed the Cæsar in John's disposition.

So Callahan had a brand of flattery that was acceptable and he profited by it. Presently the office of general manager was created for him, and there was a feeling about the place that in actual power he was beginning to outweigh Sandy McGregor.

His salary as general manager was twenty thousand a year at first—finally fifty thousand. John helped him to get some of the common stock and made him a director of the company. He bought good clothes and built a good house for his family, but worked as remorselessly as ever and was not a great deal changed, except by the tailor.

When he had become a millionaire the recreation he enjoyed most consisted of taking his seven-passenger limousine—the finest product of the plant—gathering up a load of his old, unprosperous cronies and driving them round to the best saloons, buying them all the liquor they could hold, drinking himself moderately, though liquor never noticeably affected him. He seemed impervious to it and was just as competent after an evening in the barrooms as at any other time. Usually, however, he drank little or not at all.

Such was great, raw, red-faced Callahan, one of those who had so much to do with the fatal day. Mrs. Martindale came in a year, or thereabouts, after Smiley and Callahan.

The Sarum Motor Company was making a net profit of fifty thousand dollars a month then and growing magically. Every quarter the records of three months before were outstripped. John was beginning to get a deep sense of the power of his money. No doubt it would have been different with him if his lines had been cast in New York or Chicago—or even in Detroit, where automobile millionaires soon lost their novelty; but in Sarum he cast an enormous shadow, visible to everybody, and it reacted upon him.

The town—of fifty thousand or so when he went there—had factories and fortunes before he arrived; but by the end of the third year he projected so far above them there was no comparison at all, and from that it went on increasingly. He grew in a geometric ratio, while the other fortunes advanced only by plain arithmetic. His ever-expanding automobile plant, with its incessant demand for new hands, was drawing in population by the hundreds and thousands. Real-estate booms, cottage-building booms and retail-trade booms naturally followed from that, as new dwellings, stores, moving-picture palaces, and what not, sprang up to supply the workmen and their families. In one way or another pretty nearly everybody in town got his dipperful of the flood; quite a little flock of lucky beneficiaries were added to the town's Who's Who. This went on increasingly as the motor company grew.

There were all sorts of less direct benefits. The motor company's prodigal advertising made Sarum a word as familiar as salt or potatoes from coast to coast. Other factories came in—notably the Arcum concern, which made electric lights and starters for automobiles, and in which John Turner, Walter Hayes and Sandy McGregor took interests, though it remained separate from the motor company. This became the biggest of the manufactories that followed in John's wake; but there were half a dozen others, any of which would have caused Sarum to swell up with pride in the old days.

Naturally the motor company, or more especially John Turner, was looked upon as the creator of this amazing prosperity. In a general way, whatever he or the company wanted was given as a matter of course. As the plant spread over the neighborhood it spilled across public streets and alleys. A mere note from John or from the company's attorney, addressed to the mayor and asking for a section of street or alley, was all that was necessary. In several cases even this polite formality was forgotten. The company—and John—honestly thought the city should give it whatever it wanted; for wasn't it visibly making the city's fortunes? John, with reason, considered himself a far better agency for the city's good than the collection of mediocre gentlemen down at the City Hall who constituted the formal government.

As to money, John Turner was at the opposite pole from the miser. He wished it to spend on the grand scale. Like some others in his class, there was a strain of the blood of the Cæsars in him. Dominion appealed to him powerfully.

For one instance, he delighted in building as the most visible sign of his power. He wanted his plant to be the very best. Of building in other ways, the Sarum Inn was the first exploit—set back from Superior Street, with a little plaza in front of it that was a mere waste of money from the commercial point of view, yet which gave the inn a distinction that was worth more than the money to John. It was a handsome building, decidedly larger and finer than the city could then support, and it was run in corresponding style. Presently it became a brilliant focal point in the city's social life, with dinners large and small, dances, and the five-o'clock tea, which soon became a kind of social obligation.

At that time John wasn't at all a man for what is called society—rather flouted it, on the contrary. He was genial; always wanted a friendly company about him and was always having it. But some of his associations were not of a kind that a society editor with instincts proper for the job would have approved. Whenever the feminine gender was employed in connection with his name it was for the purpose of stories—which gentlemen repeated with a laugh and ladies with elevated eyebrows—of the sort not deemed suitable for young ears.

Much of this story-telling was mere gossip, though John wouldn't in the least have minded furnishing authentic bases for it, and it is not to be denied that authentic bases were discoverable. However, there was never any open scandal about him, or any gossip that most men and a good many women would have deemed particularly dishonorable in a young and rich bachelor.

There was quite a flutter when he bought the Dinsmore house, one of the best residences on Maple Street, in which neighborhood most of the best ones stood. It was a broad-fronted, two-story dwelling, rough brick for the first story and shingled above in a more or less Queen Anne style. It seemed roomier than a bachelor could need and there was a stir of excited speculation. But, in fact, John bought it without the least matrimonial intention, and Sarum society presently accepted that fact—with some disappointment, maybe, but with a renewal of hopes too. Of course—gossip as anybody might—it couldn't close its eyes to the matrimonial possibilities involved in a handsome bachelor, well on the sunny side of forty, with an income of three or four hundred thousand dollars a year, which was growing every minute.

In plain fact John was king in Sarum, in so far as he cared to be. The town pretty much stood with its hat off to him. His luck, his amazing success, his open hand, his

KisselKar
EVERY INCH A CAR

KISSEL LEADERSHIP

THE story of *Kissel* and the *KisselKar* teems with facts of alert foresight, prompt initiative, brilliant progress and dominant leadership.

Either pacing competition or abreast of it in each vital advance of engineering and design, Kissel has occupied for eleven years a limelight prominence in the motor car industry.

The ALL-YEAR Car—an idea that admittedly towers above every other accomplishment in the history of automobile body building—is but the climax of a series of notable Kissel achievements.

Kissel ***introduced*** three-quarter elliptic springs—bringing to the motor car a new standard of riding comfort.

Kissel ***introduced*** the salon body with a corridor between the front seats.

Kissel ***introduced*** double external brakes—doing away with the danger, noise, wear and tear of internal brake mechanism.

Kissel ***introduced*** concealed lights to illuminate the instrument board at night.

Kissel ***introduced*** the arched frame over the front axle—permitting for the first time a low hanging body without sacrificing ample road clearance.

Kissel ***introduced*** the now generally adopted and efficient system of both foot and emergency brakes on the rear wheels.

Kissel ***introduced*** the merger of all electric wires on one central control board—making possible the instant location of trouble.

Kissel ***introduced*** two and three door touring bodies.

The one man top—a European patent—was brought to America by Kissel and appeared on KisselKars a year in advance of its appearance on any other domestic car.

Kissel was *first* to offer in a *medium-priced car* the full floating rear axle, electric self-starting and lighting, and the substitution of oil lubrication for grease cups.

It was at the Kissel factory—on a KisselKar—that the now universally employed vacuum gasoline feed system was developed and perfected by the inventor, Webb Jay.

Kissel was among the first builders of six cylinder engines and the first to market Sixes at a popular price.

The ALL-YEAR Car

The ALL-YEAR Car—a beautiful and complete closed coach that can be readily converted into a wide-open *roofless* touring car—has lifted Kissel from eminence to PRE-EMINENCE by actually changing the motoring habits of a nation.

Thus Kissel has been *first* in those things that figure most prominently in the safety, simplicity, appearance and comfort of the modern motor car.

Couple these facts with the further fact that the Kissel Motor Car Company has enjoyed a clean record of unbroken success since its inception—and you have every reason to let your next car be a KisselKar.

For the ALL-YEAR Car booklet and late literature write

THE KISSEL MOTOR CAR CO., HARTFORD, WISCONSIN, U. S. A.

Don't Live with Germs

Nearly all sickness is caused by them. They lurk in dark places. They breed in close rooms. When spring comes, the first step toward a clean home is complete fumigation. It is easy and quick and certain.

Fumigate Now

After the shut-in months of winter, fumigate every room. Leave the rugs in, the bedding, the furnishings—everything except the plants. Let this germicidal gas penetrate every crevice and reach every refuge for germs.

Don't be content with mere scrubbing. The danger is not the dirt. A room isn't clean, and it isn't safe, until freed of invisible germs.

After Sickness

After any contagious sickness, fumigate!

You would not think of omitting this after scarlet fever, measles, diphtheria or tuberculosis. But remember that colds, influenza and grippe are contagious, too. And you never know what they will lead to.

The wise way is to fumigate any room that has sheltered any disease which infects.

Before You Move

Don't occupy a home which others have lived in before it is fumigated. You don't know what disease germs are lurking there.

Ask the landlord if the rooms have been fumigated. If not, insist that it be done. Fumigation is easy and quick and cheap.

It is folly to risk any sort of contagion that's so easily prevented.

Wherever You Go

Wherever you go urge this fumigation. Urge it in theatres, in churches, in street cars. Pullman sleepers are fumigated regularly. Every enclosed gathering place calls for like precautions.

The time is coming when public opinion will force frequent fumigation. Help that time along. Urge and advocate it for your own protection. Patronize the fumigated places.

BAUER & BLACK, Makers of Surgical Dressings, Etc., **Chicago and New York**

Get B&B Fumigators

Ask your druggist for B&B Formaldehyde Fumigators. They accord with U. S. Government recommendations, which means twice the usual strength. Do not risk half-measures.

B&B Fumigators are convenient. Simply touch a match. They come in several sizes—fifty cents will thoroughly fumigate the average room. They harm nothing but plants. Do not be content with any inferior kind. Write for our interesting treatise on proper fumigation—free on request.

Other B&B Products

This concern has a world-wide fame for the B&B Double-Sure products. These include

B&B Absorbent Cotton
B&B Bandages and Gauze
B&B Adhesive Plaster
B&B First Aid Outfits

All made under ideal conditions. All put up in protective packages. For safety's sake, in all these lines, ask for B&B.

(Continued from Page 74)

attractive appearance, his genial manner, his air of command—dropped down in conservative old Sarum—made him a kind of embodied fairy story. He looked his part of Fortune's favorite. That local society should regret his regal negligence was most natural. It stood visibly ready to smile upon him. But it was Mrs. Martindale who brought him in.

He had known her, in a way, from the beginning. It was impossible to cut any sort of figure in Sarum without knowing Mrs. Martindale. She saw to that. Her father was Colonel Prouty, who had spent most of his life since the Civil War holding various state and Federal offices, and who still survived, in vigorous though rheumatic old age, on his reminiscences and his war pension. His daughter had married Percy Martindale, son of a Universalist minister who had really counted for much in the intellectual and spiritual life of the town for many years and had managed by economy and a judicious investment in real estate to accumulate a modest little competence, which Percy inherited.

Those in Sarum who knew would tell you there was nothing the matter with Percy Martindale, except that he was lazy, without ambition. He had served three terms in Congress. The knowing ones would tell you, too, that his wife got him the nomination, wrote his speeches, carried on his official correspondence, trotted round to the departments on errands for his constituents, and saw that governmental garden seeds were properly franked to the voters back home; in fact, did pretty much everything except sit at his desk in the House.

The inert load, however, proved too heavy even for her tireless hands and brains. He was defeated after the third term and settled down to his law office in Sarum, where the only dependable source of income consisted of his fees as a master in chancery, the appointment having been procured by his wife. But the minister's real estate was developing rather greater rental values and the pair just managed to live presentably.

Percy Martindale was now thirty-eight—quite fat and getting fatter; a bit wheezy too; with soft, light-brown hair, wearing very thin on the crown of his head and neatly parted in the middle. He was smooth-shaven, florid, sleepy-looking, inclined to doze over his paper after dinner. Yet he was always a perfect gentleman—thoroughly dependable for filling in at a dinner table, dancing puffily with homely girls and neglected matrons, handing a teacup, fetching an ice, and doing numberless other small chores of that character. He would have been a very good husband, in short, for one who could have afforded such a luxury, which Elmira hardly could.

Mrs. Martindale was forty, tall, angular, sallow-skinned, with a long thin nose that jutted out from her face as though minded to part company with it. She was not in the least handsome, though her dark eyes were fine if one could overlook their environment. She dressed badly and was so awkward that sensitive people held their breaths when she attempted to dance, the general impression being that she might fall apart at any moment. But her energy was inexhaustible and she possessed a wonderfully efficient mind. She worked three years for Percy's first nomination to Congress—from the day their engagement was announced, having, in fact, had Washington in view at that time.

Probably hardly one of all those who were its objects knew how clever and comprehensive and tireless the campaign had been. If Percy could, so to speak, have just kept awake and stepped in tune to the music, she would very likely have marched him to the Senate. But she was too intelligent not to perceive in time what Percy's fatal limitations were. It wasn't that he was a dead weight. One might push that. But he had no real consistency. Rushing him was a good deal like pushing atmosphere.

When Percy relapsed to law she was more or less an engine running wild. She went into many things; was on scores of committees, first and last, for scores of objects; belonged to no end of clubs, societies, associations for improving purposes. One could not be long in her neighborhood and have one's head at all above the average height without touching at some point or other the complicated web of her activities.

What Mrs. Martindale first particularly wanted of John Turner was a one-hundred-and-sixty-acre farm in the neighborhood of Sarum, to which boys from city tenements could be sent to learn farming. It seemed to involve only a matter of twenty-five thousand dollars. She got it. Then, without his knowing anything about that part of it, she got news of the benefaction on the front pages of the newspapers, which were well pleased over an impeccable opportunity to say something nice about so lavish an advertiser. Her own name nowhere appeared, or any suggestion that it wasn't entirely John's own scheme. He pretended to be annoyed; but wasn't really. Of course this heralded and applauded Turner Farm could be no starveling affair; so he put in another twenty-five thousand to assure its proper support.

"A mighty clever woman that! She stung me right!" John Turner commented, laughing.

He repeated this judgment in about the same terms to Mrs. Martindale, and she candidly joined in the laugh.

She knew how to take him. Like Smiley, she was a relief and a diversion for him. With her restless passion for managing things, John Turner was a fascinating subject. Presently Mr. Turner's name began to appear occasionally among society happenings. There would be a distinguished little dinner at his house, or something more pretentious at the Inn—but only now and then, with sufficient rarity to be quite an event when it did occur. Presently he took the Country Club in hand, contributing nearly all the money for the spacious new building and the better golf course. It was really her doing—brought about by astute, flattering insinuation, until when the thing was done John rather thought he had originated it.

So with the Hillsdale project—a residence district for workmen, with model cottages, some flower beds, and a library that got extensive complimentary notices in the metropolitan press. It was rather understood among the wise and observant that Mrs. Martindale possessed the password to these social and philanthropic favors, and anyone who wanted to get in had better be nice to her; but she was much too clever to let this idea obtrude on John.

He was still too busy for very extensive indulgences in society or philanthropy, being mostly absorbed in the motor company; and the business was growing by tens of millions. Time came when a thirty-minute conference between John Turner, Walter Hayes and Sandy McGregor—or, more and more, Callahan instead of Sandy—determined an expenditure of a million dollars. Or when a wire or a long-distance telephone message from John was all the warrant necessary for laying out a couple of hundred thousand.

Two persons who were so much in John's orbit as Smiley Carter and Mrs. Martindale would naturally meet. Affinity drew them together. Both, so to speak, had a capital stake in John Turner. Both were clever enough, though the woman's mind was much the abler. Both were constrained by ill luck to mere behind-the-scenes rôles. The hearts of both were lemon yellow with disappointment. They drew together. Presently Smiley was dropping in at Mrs. Martindale's with a frequency that might perhaps have inspired gossip if gossip concerning two homely, middle-aged persons—the one angular, the other with a stiff leg—hadn't seemed obviously absurd.

"You and I ought to send him to the Senate," said Mrs. Martindale one day, her dark eyes gravely studying Smiley's lean face.

"He wouldn't care for it," Smiley replied.

"But he can be made to care," she answered. "I know him! Just making automobiles will cease to amuse him after a while. He ought to have something else to do."

They had fallen into a way of discussing John between themselves with that candor—as a kind of joint property.

This was the beginning of the famous Turner Fund. The main idea was that a certain proportion of the profits of the motor company should go into a trust fund, in the management of which representatives of the workmen should have a share—carefully restricted to a minority, however. From this fund pensions were to be paid to hands who reached a certain age after having been in the company's employ a given number of years, and to those who might be disabled and the dependents of those killed through accident.

The more novel feature was that, after a given term of service, a workman could draw out his share of the fund, based on the wages he had received. There were

In the Laboratories of Father Time

the real facts about pipe are brought out

MOST pipe looks alike when new. To most people it is either "black pipe" or "galvanized pipe." But in the laboratories of Father Time, there are two kinds of pipe, the kind that lasts and the kind that doesn't.

BYERS PIPE

GENUINE WROUGHT IRON
FULL WEIGHT GUARANTEED

has found favor with Father Time, for he has seen thousands of tons of modern metals crumble into dust while the old-fashioned, hand-made wrought iron, from which Byers pipe is manufactured, has survived for centuries.

Byers, by years of unremitting effort, has made this rust and stress-defying pipe available, at a moderate cost, to the home builder, the business man, investor, manufacturer, engineer, railroad man, and all who buy pipe for durability.

Byers is the only pipe which has the Name and Year of Manufacture rolled into the metal for easy identification and as a check on its life. It is the most lasting pipe for plumbing, heating, gas, steam and fluids of any kind.

Write for booklet "The Selection of Pipe" and other information about Byers Pipe.

"You gave me courage to go into business for myself"

"For years I had wanted to," writes a man from the Middle West, "but I did not dare. The first three lessons gave me the courage." That is what he got from the

Course in Personal Efficiency

Taught by Mail, Prepared by Harrington Emerson

So deep in our lives are the foundations of this new Efficiency idea applied to the individual, that each man gets what he needs most from it. One man gets courage, one gets health, one gets time, one gets wealth. For Efficiency means the shortest, quickest, easiest way to reach *your* goal. And Harrington Emerson, who has taught Efficiency to so many corporations, has adapted it to you in 24 powerful, complete, condensed lessons.

The corporation has capital, plant, men; you have brains, time, energy. Through these lessons you will learn to make the most of your brains, time, and energy with the least effort.

These principles are not casual ideas of Mr. Emerson's. They are the scientific principles he has developed in forty years of study. He has applied them in over 200 factories, railroads and other organizations. They are studied by other Efficiency Engineers in America, England, France, Germany and other countries who have learned them from Emerson. His big organization in New York—(he has 40 assistants) has taught Efficiency to steel mills and railroads, factories and publishers. Hundreds and hundreds of the biggest people have endorsed this course—have studied it and applied it to their daily affairs We have a book of over 300 reproductions of letters which we will gladly send to you, if you wish it.

20,000 Students Enrolled

Efficiency for the individual has swept through the world. 20,000 students have already rushed to enroll for this course. From California comes one who is saving thousands on a government job—from Iowa one whom the course has put on the right path to success—from New York an editor who got back his health—a writer who does twice as much work in less time—the Secretary and Treasurer of the biggest bond house in the Northwest saved an hour and a half a day from the first lesson.

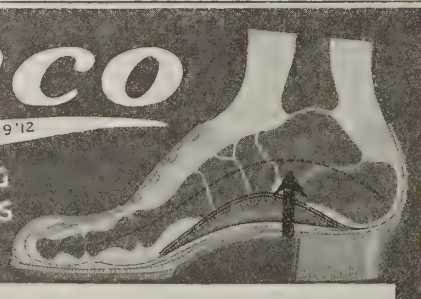
PAT. JAN. 9 '12

MUSCLE MAKING ARCH SUPPORTS



Before the Arches Fall, Heed the Demands of Tired, Tortured Feet

Every step you take, the entire weight of the body bears on one foot. If your arch is weak, the strain will, in time, break the arch down and you will be "flat-footed." Any one who has suffered from fallen arches knows the agony, similar to toothache, and less easily relieved.

Lynco Arch supports relieve the strain and pain, preventing flat-foot and also correct the trouble after the arch has fallen, gradually building it up to its normal position.

Lynco Supports are scientifically moulded, sponge-rubber cushions, leather-covered (no metal), light in weight and self-conforming. Eminent surgeons endorse them because they perform the functions which the fallen arch cannot.

Sold by shoe dealers in most cities, or mailed prepaid on receipt of $3.00 a pair. Give size of shoe and state whether for man, woman or child, or enclose diagram made by standing on paper and pencil-marking around stockinged foot.

LYNN RUBBER MFG. CO., 584 Washington Street, Lynn, Mass.

calculations showing that pretty much everybody would finally have a little fortune. One argument was that it avoided the temptations to extravagance which attended higher wages. It was shown by statistics that the cost of living rose as wages rose, but by this arrangement workmen would be able to circumvent that tendency.

It took many months to bring it about—months of clever, laughing suggestions by Mrs. Martindale, all adroitly flattering; of humorous words dropped in here and there by Smiley. The plate was set before John; and then, without the least obtrusiveness, without any show of persistence, with never a chance of boring, the two directed his attention to it—just a smile and a nod in that direction, and then talking about something else.

Mrs. Martindale would mention an instance of poverty among workmen. Smiley would happen to recall a magazine article he had read on the subject of workmen's pensions. What should a man who was deriving great wealth from the labor of many hands really do? It was an interesting subject, wasn't it? Perhaps it might be one of the greatest subjects in our democracy, with demagogues ranting and socialists stirring up discontent. If a man could devise a plan which would prevent strikes now—what did Mr. Turner think about that subject?

When it was finally done John Turner hardly knew that it wasn't quite his own scheme, big and forceful and able as he was.

Mrs. Martindale had learned a great deal about the art of publicity during her active political experience. The Turner Fund was projected on a large scale, with enough millions of dollars in the calculations to make it good newspaper material in any case. Nothing of the opportunity was wasted. The whole nation had Turner Fund at its breakfast next morning—with a prolonged infantry fire of editorial comment and magazine treatment following the grand broadside.

This celebrated fund might be called a turning point in John's life—or, better said, a milestone; for though he went far and came to places much different from those he had originally intended, there was really no sharp deflection—just an ever-bending road.

Before this fund was announced he would have been called a young, eminently successful, plain American citizen. Very likely he would have described himself that way. But success had been pouring down on him. For several years every circumstance of his life had fed his naturally vigorous self-confidence, stimulated his pride, hardened his inclination to command. Mrs. Martindale had always managed to let him know—with a laugh and a jest, in such ways that a modest person need not feel bound to deny it—that she considered him a man apart, a genius.

John had paid millions of dollars for advertising by that time and thought he knew something about affecting the public mind by printed words. He rather supposed everybody who could read already knew there was such a concern as the Sarum Motor Company and that a man named John Turner was its president. Yet the results of Mrs. Martindale's ingenious publicity campaign for the Turner Fund really astonished him. It seemed that he had been discovered only now. He had an odd feeling that the whole United States suddenly stood up and looked at him.

Immediately his mail grew ponderous with all sorts of begging letters. Invitations to speak at all manner of banquets in all parts of the country rained down on him. His portrait began to sprout magically on newspaper and magazine pages. Soon the President invited him to Washington to consult about some labor legislation.

For a very little while John affected to treat all this with humorous derogation—mere newspaper buncombe, which he pretended to wave aside with a smile or with some slight annoyance. But this modest attitude didn't last long. Of course everybody praised his fund. An impression that the nation is standing up and applauding must have its reaction on almost any mind. Flattery on that scale is not easily resisted, and John was naturally susceptible to flattery.

It wasn't long before he accepted the fact of being a national figure with due seriousness. Little touches showed it.

For example, if bluff Sandy McGregor flatly contradicted him—as not infrequently happened—close observers who knew the lay of the land might easily surmise an impatient presumption in John's mind that Sandy was a blockhead. Small jests at his expense—current enough in the free and easy give-and-take of American talk—which would formerly have brought an appreciative or indulgent laugh, were now sometimes received with distinct coldness, or even with a slight frown. He liked to have his opinions treated with respect, whether he knew anything about the subject or not. If some young men about the place took off their hats in addressing him, that was not displeasing.

Meantime Mrs. Martindale had that satisfaction which comes from successfully employing the creative faculty. The national figure was pretty much her handiwork, assisted by Smiley Carter. It might seem that the homely woman, with her long, angular and rather leathery face, denied by Fate the principal rôle to which her brains entitled her and relegated to working mostly out of sight of the gallery, got little enough out of it. That would overlook her passion for managing—her restless will to direct. For a woman of her turn of mind, there was nothing else in that part of the country so well worth managing as John Turner. It meant holding the switch on the big dynamo.

Then another large factor emerged and threatened to overcome her. The Turner Fund was announced in September, 1912. In the next month John met Mary Ward.

IBERIA

(Continued from Page 25)

Benham's blood froze. Surely there was a mistake! Nickel couldn't go off three-quarters of a point between sales! He stiffened to ask the question and felt a hand on his arm.

"Brother," said Mr. Skeel softly. "This is a hi-sterical market. Let's say two points more!"

"But—you said ——"

"Too active—too active! Too much excitement. Let's say two points more!"

The tout intoned monotonously: "Paper seven-eighths . . . . Reading a half . . . three hundred at five-eighths . . . . Steel an eighth . . . . Cuba Cane a half . . . . Ray right. . . . Nickel an eighth."

"You picked a cripple, brother," said Mr. Skeel humorously. "Let's say ——"

"Wait—wait a minute!"

"Speak up then—and put up."

"Listen!"

"I'm deaf to-day, brother. Suppose you slip me fifty more!"

"Listen, I ——"

"Are you coming across or not?"

"Hold on just a minute! I ——"

"Are you?"

"No, but if you'll wait ——"

Mr. Skeel's voice swelled authoritatively: "Sell twenty-five Nickel at the market, Sam!"

"Nickel—twenty-five at the market!" echoed the clerk, far back in the cage.

And shortly, while Benham was sitting dazed, the proprietor dropped to the chair beside him and affected equal woe.

"We got out at forty-five and three-quarters," he mourned contentedly. "Six and a quarter commission, that leaves you six and a quarter. It's such chicken feed—mind taking it in cash?"

The recurrence of a familiar word beating against his eardrums sent Benham's attention to the board, and what he saw there drove him frantic.

"L-look!" he choked, plucking at Skeel's arm. "Look at that! I knew! I t-tell you, I knew! It was coming back—it had to come back! It's the big bull market! If you'd waited—if you'd just waited ——"

"Steel a hundred and nine," shrilled the tout excitedly. "A thousand at a quarter . . . a half . . . five-eighths . . . . Ida a half. . . . Nickel forty-six . . . a half . . . forty-seven . . . five hundred at an eighth."

"You robber!" howled Benham, wide-eyed, leaping to his feet. "You crook! You ——"

Mr. Skeel got to his feet and pointed to the door.

What Women Say About Shoes

WITH Easter at hand and Spring almost here, women everywhere are thinking about shoes.

They are asking each other questions:

Are prices going still higher?

Is the rising cost, the shortage of leather, actual and necessary—or is some one taking advantage of conditions?

What is the practical, sensible thing for a woman to do?

Right along, in these pages, The Regal Company has been giving the inside facts about leather and shoes.

So far as we can learn no other manufacturer has thought it worth while to take the public into his confidence.

We do so because we see Regal as an institution, responsible to the public and to more than two million loyal customers.

This business started 24 years ago, in a small way—but with a big idea. It now has three great factories, fifty of its own stores in the metropolitan centers and a thousand dealers (special Regal representatives) in other towns and cities.

Why shouldn't we tell the *truth* about shoes?

Now this is the way we see it.

Kid-skins can't come in from India, nor calf-skins from Russia. There are not enough ships. The United States practically has no ships.

Leather is getting scarce. It will be higher before it is lower. Shoe prices had to go up.

But—

There can be no question or doubt that advantage has been taken of the scarcity. There were instances the past season where prices were boosted sky-high!

Regal Shoes wherever you found them were uniformly good value.

Then why didn't women go to the Regal Stores? They *did*, by the *thousands*. Some women didn't—because they had never been in a Regal Store.

The tendency of women to stick to habit or routine in buying is what gives the price-booster his opportunity!

The sensible, practical woman wakes up and looks around.

She will find the best values in a National, Standard shoe like Regal—where the *Maker* is responsible to *her* and the price is a known quantity.

This is our advice for Spring:

Find a good, stylish, reliable, *known* Make of shoe at a moderate price, say $5 to $8.

Then buy *two* pairs.

And get Regal Shoes if you can.

You want style and good looks, you want honest leather and fine workmanship: you want a "glovey" shoe that will *wear* and keep its shape (not less than $5, or more than $10)—that's the Regal range.

If you can't get Regal Shoes in your town write for our Style Book and foot-measuring chart. We can serve you by mail.

The Newest Wonder of Motordom—the

Multi-Powered Car

Won National Approval in 30 Days

Since last month's announcement of "A Power Miracle" the demand for this new wonder car has grown in an astounding way. East, West, North and South all wanted it at once. Notwithstanding, our enlarged factories are making immediate deliveries. The Multi-Powered Car is hailed as a revolution in light car performance. By new motor construction its power is *multiplied*.

In 30 days the Crow-Elkhart Multi-Powered Car has become the king of light automobiles. Its success has been immediate.

This is exclusively Crow-Elkhart motor design—no other motor embodies the same engineering ideals.

A new kind of power is created by a new kind of construction.

Motoring is transformed into travel smooth as silk.

Without the slightest evidence of vibration, without speed-effect, if you wish, you sweep along at 50 miles an hour. Acceleration is spontaneous—from a standing start to 40 miles an hour in 20 seconds. The liquid power-flow seems the same at all speeds—just expands at your gentle foot press. In traffic you lull down to 3 miles an hour on high gear.

The wonderful wide range of power and flexibility is as great as your need will ever be—greater than ordinary driving requires. This is the miraculous effect of multiplied power in the Crow-Elkhart Multi-Powered Car. It gives the brute energy of a far heavier motor with a supreme refinement of power—silken smoothness that seems the same at 20 to 30, 30 to 40, 40 to 50 and 50 to 60 miles an hour.

Such dominant smoothness enables the utmost economy—20 to 26 miles on a gallon of gasoline. It reduces all car strain. It brings new multiplied power advantages in a moderate priced car—creates a new standard at $795.

Engineer Martin E. Crow has crowned the success of his 9-Year Chassis and its many up-to-the-instant advancements. No other established car under $1000 in price has a similar improvement.

Write for Complete Description

Get a full account of the wonderful performance of the Crow-Elkhart Multi-Powered Car. Read the secret of its miraculous power! Know its dominant features. Then see the beautiful coach work and custom service—Ten Color Options and Three Upholstery Options—which top this amazing value. You'll realize *how* this Multi-Powered Car won national approval in 30 days.

Only Two More Weeks at $795

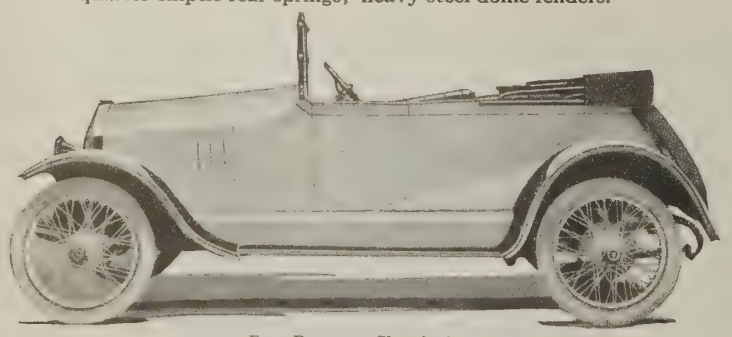
At midnight, April 14th, the Crow-Elkhart Multi-Powered Car (Touring and Roadster) advances in price to $845, wire wheels $50 extra. You save a goodly amount by placing your order at once. Here is the ultimate in motor car construction—still within your grasp at a price so low it cannot be continued.

CROW-ELKHART MOTOR CO., Dept. 19, ELKHART, INDIANA

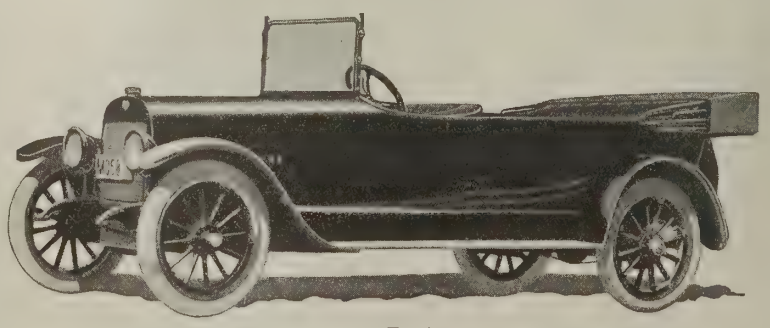
Canadian Crow Motor Company, Limited, Mt. Brydges, Ont.

Dealers: Still a few open opportunities. You should wire. No equal chance in next two years.

Features: The Crow-Elkhart Multi-Powered Car is the largest car in America at the price—with extra tonneau space and wide 49-inch rear seat; 114-inch wheelbase; light weight, 2040 pounds (touring); chrome nickel steel gears in rear axle; full floating rear axle; underslung three-quarter elliptic rear springs; heavy steel dome fenders.



Four-Passenger Cloverleaf Roadster, $825; with Wire Wheels, $845



Touring Model, $795

Crow-Elkhart Multi-Powered Car $795

(Continued from Page 78)

"Out!" he threatened. "Get out before I have you put out! Get! And stay out! Hear me? Don't you come in here again! See?"

Benham's blood boiled over; he raised his hand and then, all at once, he slumped. He laughed coldly and took an uncertain step forward. His collar strangled him and he eased it with a jerk.

"I w-will, my Christian friend," he said, in an ungovernable fit of palsy. "I will—and—th-thank you for your d-damned kind advice. I'm through!" And as he stumbled through the doorway he heard the joyous monotone of the gaudy turfman at the ticker: "Paper a half. . . . Steel a hundred and ten. . . . Nickel forty-nine . . . they're off!"

To Benham, descending from the mid-afternoon local at Iberia, the hideous stone station, the damaged hacks at the edge of the platform, the cobbled street, the frayed and dusty park with its fencing of painted gas pipe, the opposite row of false-fronted shops—all these familiar sights appeared as blots upon an ugly landscape, but how they thrilled him! For Iberia might be humble and it might be garish, it was certainly funny and provincial—but it was home!

He was unable now, as he had been unable before, to explain how the homing instinct had seized and mastered him. Suddenly, as he had paced the streets of the greater city, struggling to steady himself against the forces that threatened to destroy his mental adjustment, a vision of Iberia had risen clearly out of the blackness of his thoughts—Iberia, placid and unassuming, restful and mercifully ugly and unashamed. He had recalled that a scant half mile from the town hall there were open fields, and trees uncatalogued, and flowers growing wild, and spontaneously his eyes had ached to behold such scenes, and his lungs had ached for uncontaminated air. He had recollected schoolmates; impulsive, joyous companions whom he had loved—one of them was a girl—and he had craved to substitute them for the picaresque associates of his recent travail. He had halted incontinently and proved a sum in simple mathematics. New York had thrown him solidly, and Benham, as he at length continued his slow march uptown, had inwardly cried "Down!" and set his whim in resolute concrete. He would go home!

Hence, with the residue of his personal belongings in one suit case—diplomatically new—with two hundred precious dollars—O wily pawnbroker!—in his pocket and a natty suit on his back, with his bridges burned and a remarkable letter to Miss Merrihew in the mail, he descended at Iberia, not in the downcast mood of a defeated prodigal, but in the consciousness that here, where rumor had vastly overrated him, he could find temporary solace and refreshment. He could relax and ventilate the halls of his too highly carboned fancy. He could build up a new perspective, fix a new horizon, and undertake a new crusade against the fates. And he had really come—without arraigning Helen Merrihew as his accessory.

For a moment, as he withstood the clamorous solicitation of the hackmen, his reversion to the environment was so complete that a former address trembled on his lips; but his grin of self-enjoyment perished at the realization that Iberia was indeed his home—but only geographically. His relatives had, during the interval of years, vanished forever. Benham sighed and from compassion chose the least immaculate of the drivers.

"Mansion House," he said. "No trunk—only this."

Behind the desk at the hotel there was an alert young man, who exclaimed with pleasure and fairly bounded over the desk to greet him. It was an old high-school chum, and Benham could have fallen on his neck with ecstasy. Iberia remembered! The clerk, jealous of his prerogative as a friend of the native son who had tamed New York, appointed himself immediate and personal escort; the room was straightway freshened; the Courier-News was notified instanter. When Benham went in to dinner he encountered a pair of his quondam cronies dining together; and from their delicately respectful heartiness he perceived that Iberia had been classifying the absentee as a second Morgan. It was generally understood that he had resigned his recent post in order to engage in capitalistic ventures; it was commonly said that he had cleaned up a hundred thousand in munition stocks. Benham didn't know who had fathered these rumors, but he was grateful for them.

Later, as he strolled down Main Street, he found himself hailed by a score of local dignitaries as a general of finance, a boy of whom the city had just cause to boast. Was he remembered? Was he? Iberia was proud of him. Iberia understood that he was making money hand over fist—little birds had said so. Iberia had expected it of him. Iberia had told Iberia so! When he went to bed, Benham's tear ducts were troubling him, and in the darkness he said fiercely to himself that Iberia must never know the doleful truth. If necessary, he would squander his entire resources in a day and disappear permanently, but Iberia must never know the truth! Yesterday he had been morally depressed and spiritually exhausted; to-night he was exultant and on guard. They thought he had made good, did they? Well, he wouldn't disappoint them.

"Watch me!" whispered Benham, luxuriating in undeserved praise. "I'll show 'em! A millionaire for a day! Watch me!" And, for the first time since the break in Reichsmarks, fell contentedly asleep.

"In two years," bragged Horatio Dunning, youngest but most astute of realty experts, "we'll have a city government, Ernest. We'll have the finest ball team in any town of its size in the United States. We'll have a per-capita wealth that'll beat Detroit a mile and make Brookline, Mass., look feeble. We've signed contracts to donate free manufacturing sites to eleven new factories employing a total of two thousand hands. I tell you, they can't stop us! And all we need is to have the coming generation stay with us, and not hustle off East the way you did."

"But don't forget," said Benham, "that when I was in school the outlook wasn't so bright."

"It's so bright right this minute," proclaimed Dunning, "that I'll make a blind bet that out of our class in high there are five men in this town to-day who make more money than you do!"

"That's not much of a bet," granted Benham, "when a steel plant can pay for itself in a year. But what astonishes me most is that with all this prosperity you've still got such rotten little banks."

"What?"

Benham nodded.

"Look at 'em! Here's a town of twenty-odd-thousand population, dizzy with war orders, and there's the First National, and the Farmers' Loan and Trust, and the State Street Trust and Deposit, and the Iberia Savings, and the McClellan County Loan and Savings, and Smith and Harper's—six of 'em, and not one with decent capital or half enough deposits or a modern directorate. Of course I'm especially interested in banking, but ——"

"What's the matter with the directors?" asked Dunning, who helped to guide the destinies of the First National. He was smiling quizzically.

"Why, the only reason for letting a bank director live," said Benham, "is because he keeps on bringing in new depositors. Out this way you're still working along the old lines—you hand out directors' jobs as social favors. Take the State Street; from the gossip I've heard, they'd actually rather have depositors who keep hundred-dollar balances and come round in touring-cars than tradespeople who don't always wear clean collars but have a couple of thousand on tap all the time. That isn't business! The State Street's a social climber. And, besides, every bank I've seen so far is nothing but a hothouse of nepotism—they're all alike. They're jokes. Believe me, Horace, one good, husky up-to-date outfit could put five out of your six banks into the discard inside of eighteen months! Why, I got out of a New York bank simply because it was too slow!"

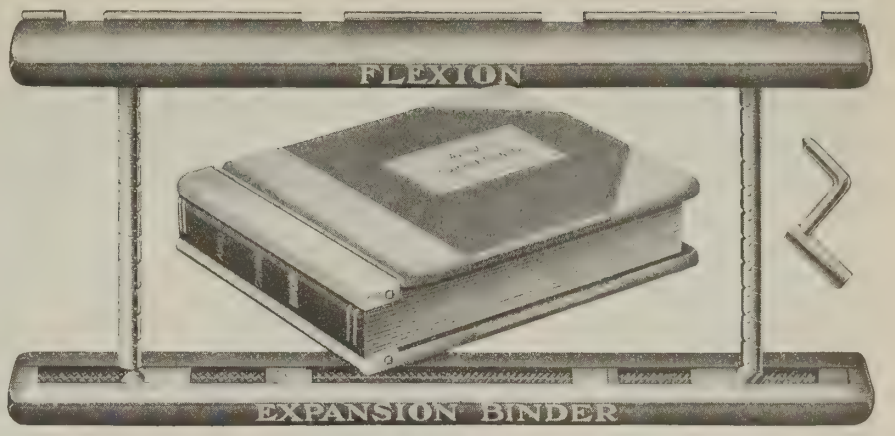
Dunning half closed his eyes and smiled more broadly.

"Well, I suppose you know what you're talking about. Besides ——"

"Do I? Answer me this: Do you know how many manufacturers in Iberia borrow in Canton?"

"Why, not many."

"Oh, but they do! At least a dozen of 'em do. Why? Because there isn't a bank in Iberia that has enough capital to make even one big commercial loan. Look at the Farmers'—capitalized at fifty thousand!



25 Points of Superiority and Efficiency

The ADCO Flexion Expansion Binder

The first new idea in loose leaf Binders in 20 years. All unsightly, awkward, external posts eliminated—no sharp edges—lies flat—and cannot mar the desk—simple in operation—no complicated mechanism—infinitely superior to the old style.

Over twenty years ago the heavy three-piece-back ledger and sectional post binders were placed upon the market and from that time to the present, they have given universal satisfaction because they were the most perfect and complete binders ever introduced. The Adco-Flexion Loose Leaf Binder, which we are now introducing, is such a definite and radical improvement over the heavy three-piece-back ledger, that it ***will rapidly replace all other styles*** in every live, wide awake establishment. It has so many new features, so many points of excellence, that it has only to be seen to be appreciated. No aggressive up-to-date office can afford to retain the old style. The "Adco-Flexion" eliminates every objectionable feature, is simpler, less cumbersome, more adjustable and better than the old style.

Mechanically Perfect

The mechanism of the "Adco-Flexion" embodies entirely new principles in steel construction with ***small minimum*** and ***large maximum expansion.*** The chain posts, a novelidea, are entirely hidden—are adapted to limitless contraction and expansion and have high tensile strength. The "Adco-Flexion" has very few parts—nothing to get out of order. Practically indestructible. Fully covered by patents.

No Marring of Desks or Furniture

One of the great objections to the old style Sectional Post Binder is the ***posts*** which protrude and which are continually scratching and marring the desks. This is entirely done away with in the "Adco-Flexion" as all posts are eliminated. Metal Back is rounded, heavily nickeled and highly polished, presenting a smooth and beautiful appearance.

Bookkeepers Made Happy

The "Adco-Flexion" is not as heavy and cumbersome as the old time binder. We have often sympathized with bookkeepers in having to struggle with those old style devices—compelling them to do manual work in addition to using their brains. The "Adco-Flexion" does away with all such work—it's light, attractive, nothing to catch and tear your clothes—opens flat and can be stacked one on top of the other.

More Economical—A Reduction in Expense

The "Adco-Flexion" will outlast any two binders ever built. Being capable of endless expansion, there is no expense for new backs; leaves are inserted more easily; the adjustment is automatically taken care of—it holds a few or 1000 leaves, saves office furniture, saves vault space—an economical adjunct. Ten minutes of investigation means a big saving for you.

We will gladly arrange for a practical demonstration of the mechanical workings of the Adco-Flexion Expansion Binder right in your own office. Its superiority will be proven—you will be convinced that it should be a part of your office equipment—Requests are being received by the hundreds, so act promptly—USE THE COUPON.

25

1—Binds a few leaves or 1,000 leaves.
2—Holds leaves securely and in best alignment.
3—Has non-projecting chain-posts, 5/16" or 3/8" dia.
4—Requires no sections to increase capacity.
5—Expanding mechanism all within small steel tubes, no parts in covers.
6—Chain posts are flexible, same diameter entire length, no smaller part as in telescoping posts.
7—Has no leather back to wear off or become loosened.
8—Enables greater finger space for easy insertion or removal of leaves.
9—Lighter and more easily carried about.
10—Smaller, less clumsy and saves vault space.
11—Can be made to fit any size of leaf.
12—Any center to center can be duplicated.
13—Binds a few or many leaves, saving heavy expense of changing backs to secure additional capacity.
14—Adco-Flexion Expansion Binder has less minimum and greater maximum capacity than others.
15—Stacks level on desk.
16—Saves your office furniture, all surfaces are rounded.
17—Leaves, with any hinge treatment lie flat.
18—Has stability of flat back Ledger Binder.
19—Has easy rotation of Round Back Ledger Binder.
20—Adco Hinges are most substantial and uniform in appearance.
21—Heavy pressure on binding edge of leaves does not cause the hinge to bulge outward and raise covers.
22—Leaves cannot enter Chain-posts and are easily moved along.
23—Capacity grows with the business.
24—A Peer among binders for quality.
25—Economical, practical, efficient, a money saver.

They can't legally loan more than five thousand to any one client. What's that in these times? And why should a man wander round town, picking up five thousand here, and three there, and two some place else, when he can hop over to Canton and borrow twenty-five or thirty at a clip? Why on earth hasn't there been a consolidation?"

"They're all too cocky," said Dunning. "No doubt about it—it ought to be done. But that gang would cut off their noses out of spite!"

"That's because they aren't organized on a sound basis. Why, I remember when Smith and Harper's opened, don't you? They'd both made some money out of rolling mills, and they wanted to get into a bank, because they thought it was a fine, genteel, aristocratic thing to do. And when nobody would let 'em into the game, they set up for themselves out of plain pique. It was childishness, that's all. I've seen their statements, and they aren't clearing four per cent on their investments—and I don't believe the others are, either. They ought to be telescoped."

"Right!" maintained his friend. "I've had that hunch myself! But it won't be done unless somebody comes in from the outside and sells everybody on the proposition, and then engineers it to a finish. I've sounded various people once or twice, and they balked like so many steers, but if a disinterested party who had a standing, and no quarrels with anyone—well, a man about like you, Ernest—took hold of it, he could make a killing!"

Benham's pulse pounded, but he smiled indulgently.

"I could hardly tackle a scheme like that, Horatius."

"Well, why not?" Dunning began to show signs of eagerness. "This is as good a time as any to talk things over—and I've been wanting to pick a bone with you for years. Ernest, you're one man who ought to have stayed in Iberia. We need you—we need you like thunder. New York doesn't—she's got thousands of you. But towns like this go to make up the spinal column of the whole country. There are opportunities right under your feet—Lord, how many there are! You've got a lot of friends here; friends that won't judge you by cash; friends that'll boost you because they like you and have faith in you. And from your experience, you could help Iberia! You've got new ideas. And you've made your mark once, so you'd get a flying start. Everybody in town thinks you're a howling wonder! Why don't you locate here, instead of losing your hair in New York? Suppose we put over a merger such as you've suggested; it would double the importance of the town! It would be a big inducement to new manufacturing interests! It's a thing I've had under my hat for a coon's age, but I couldn't swing it alone. Now you come along, foot-loose and technically equipped to break into the game. It would be good for you too."

"Well—not financially," said Benham, endeavoring to be indifferent.

"I'm not so sure about that! You see, I agree with you on the consolidation. I've done some gumshoe work myself in that line, only, as I said, there's been too much politics. The men in control were too proud to admit they weren't gaining, and too stupid to expand, and too snobbish to get together. But we do need a big bank here, and it looks to me as though you're right on the front steps. Now the combined capital of the four we've got, omitting the savings banks, is—let's see—two hundred and twenty-five thousand."

"The merger shouldn't have less than half a million at least," observed Benham.

"Well, that isn't extravagant—plenty of people would invest if they were sure of safe management. It could get deposits of close to two million, if we assume that borrowers won't go to Canton if they can get accommodation here. And that's simply the beginning! With more factories coming in——"

"When do they come, Horace?"

"From three to ten months. I'll tell you what I'll do—I'm on my toes on this proposition, because I've always been strong for it—I'll have a dinner for the four presidents to-night, and you can talk to 'em! Let's launch something!"

"But you're traveling too fast! Where do I fit in?"

Dunning thought diligently.

"Offhand, Ernest, I should say that Kelly of the First National will be the biggest obstacle. But if he'd consent to be chairman of the board, and Saunders of the Farmers' is president, I don't see any reason under the sun why you shouldn't be first vice president—that is, if you can convince the four of 'em that you can handle the situation. Then it would be only a question of time before you got 'em on the hip and took command. Personally I'm so sure that you can knock 'em clear off their feet, with your New York prestige, that if I were you I'd insist on getting at least a tenth of the present stock to be contributed pro rata by the other holders, and a salary of at least fifteen thousand, with an agreement for more if you show results. That's little enough for you, but look at the future of it! And they ought to fall for it, because I doubt if any of 'em is making a nickel over four per cent, as you guessed. And I'll subscribe fifteen thousand for the additional issue myself! You camp in Iberia, Ernest, and you and I'll own this town when we're forty!"

Benham leaned back in his chair and pondered.

"Naturally," added his friend, "that doesn't seem a whole lot to you just now, Ernest. As far as I know, it may be less than you stand to make in New York in another year, but you'd be happy, and you'd be helpful, and instead of being an atom in a metropolis you'd be a mighty substantial citizen here. Money goes a long way in these parts."

"'Better be first . . . in a little Iberian village ——'"

"Right!" cried Dunning. "You've hit it! Shall I call up Kelly and Saunders and the other two, and see if I can make a date for to-night? It can't do any harm!"

"Er—now, Horace ——"

"Vice president of the combined banks of Iberia, Ernest? I tell you, if you'll stand by me—I've got some selfish motives in this, too—I'll back you to the limit!"

Benham gulped and controlled himself relentlessly.

"All right," he said, with insouciance which nearly got away from him. "Maybe they can make it worth while. As a matter of fact, old man, I'm sort of tired of Broadway. Life in New York's pretty swift, and I'm worn out. This would be a sort of rest—if the price is right. Go ahead and speak to Kelly!"

In the excess of his joy that night he came very near to telegraphing Miss Merrihew, but an overwhelming caution restrained him. She hadn't replied to his letter and, furthermore, he didn't like to think that it was she who had sent him out to exile in Iberia. The little dinner at the Mansion House had been successful, far more successful than either Benham or Dunning had anticipated. The banking system of Iberia had for a decade stultified itself, and Kelly of the First National, Saunders of the Farmers' Loan, and Smith and Harper were continuing in business only because of their egoism and their heavy investments. Hopelessly inimical to each other, they welcomed Benham with open arms. They had known him as a boy, they had known his parents and his grandparents. His suggestions were constructive, and his energy and integrity were beyond suspicion. He had Dunning behind him, and Dunning was a man to watch.

The moment was auspicious and Benham was in the nick of time.

Each of the four presidents promised to call a special meeting of his directorate and swore to sponsor consolidation; and informally a committee was chosen on the spot to prepare the tentative plans for unity. It was understood that Benham was to play a leading part in the management; that five per cent of the total issued stock was to be presented to him as an inducement to forfeit the fleshpots of New York, and that his salary for the first year was to be exactly a third of Dunning's estimate. But the prospects were roseate, there were to be guaranties for successive years, and Benham didn't dare to breathe until the four directors' and stockholders' meetings had unanimously approved the comprehensive merger. Then he thanked his lucky stars, and set his teeth, and made ready to finance himself for the immediate present. Iberia had given him an opening and trusted him. He'd show them!

There would still be several months before the legalities could be completed; in the meantime how was he to live? Iberia was growing visibly; what did Iberia lack of profitable conveniences? Benham sat down for an evening with a pencil; he corralled a transient fantasy or two; he spent

(Continued on Page 85)

YES, *a* MONOPOLY *in* HUDSON SUPER-SIX

BUT NOTE HOW WE EMPLOY IT

It is true, as some say, that the Super-Six motor constitutes a Hudson monopoly. We control it by patents. One must buy a Hudson to get it. But note how far the Super-Six undersells many cars which it out-performs.

We must expect that every possible argument will be used against the Super-Six.

The arguments used a year ago have all been disproved and abandoned. Over 28,000 Super-Six owners have proved every suspicion baseless.

Now some say, "We also have an improved Six." Some argue Eights and Twelves. And some reflect on the Super-Six monopoly.

Mark the Hudson Value

But remember that Hudson has won by performance the pinnacle place in Motordom.

The Super-Six motor has added 80 per cent to the car's efficiency.

It has proved an endurance which is yet beyond measure—probably a doubled endurance.

Against all other types, however costly, it has won all the worth-while stock-car records.

And a year has been spent to make this car, in every detail, worthy of its front-rank place.

Yet note how many rivals—all without the Super-Six motor—sell above the Hudson price. Every buyer of the Hudson Super-Six gets a value of performance which can't be matched.

Why Another Type?

Then why consider another type of motor in buying a high-grade car?

Not because of performance. The records of the Super-Six prove it supreme in that.

Not because of endurance. The Super-Six excelled—as high as 52 per cent—in the feats which prove that.

Not because of smoothness. The whole Super-Six supremacy comes through minimized vibration.

Not because of anything. If any other motor type were better, don't you know that Hudson would adopt it? Rival types are not controlled by patents.

The Friction Question

The only question is, what motor best reduces friction? For that is the aim of all.

It is motor friction that wastes power, that limits performance and that causes wear.

Friction was the limitation of the old-type Six. Friction caused the trend toward Eights and Twelves. And the solution of this problem is what stopped that trend. The Super-Six invention, by reducing friction almost to nil, gave the crown to a new-type Six.

It isn't speed, or power, or hill-climbing ability which makes the Super-Six supreme. It is endurance, due to lack of friction. That is what won those records. If that is important the Super-Six is important.

A New Gasoline Saver

The latest Hudsons have a new gasoline saver which adds greatly to their economy. They have bodies which show our final attainment in beauty, finish and luxury.

To own a Hudson Super-Six means to rule the road. And this car, in any crowd, looks the monarch that it is.

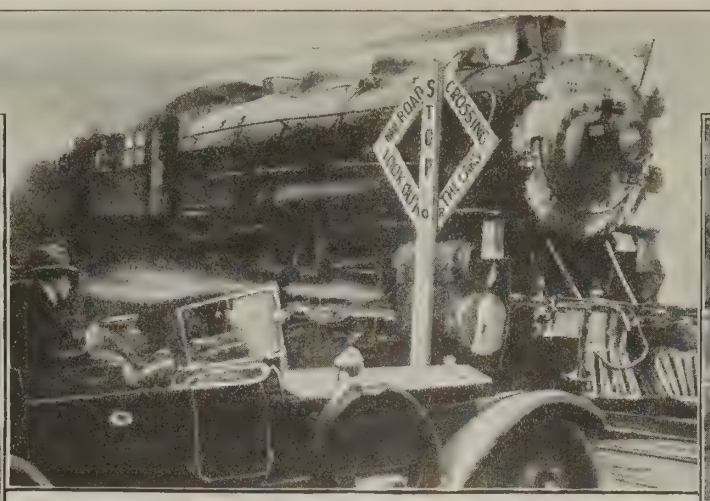
HUDSON MOTOR CAR CO. DETROIT, MICHIGAN



In an emergency

In traffic *On hills*

If your brakes grab or slip-

Learn how leading car makers guard against it

Your life depends on the efficiency of your brake lining. Grabbing or slipping brakes menace your safety.

In traffic, in an emergency, on hills, your brakes *must* work promptly and smoothly.

Realizing the importance of good brake lining, leading car and axle manufacturers select for their cars and axles the brake lining that won't grab or slip—Thermoid Brake Lining.

Some of the cars that use Thermoid Brake Lining are:

Pierce-Arrow	*Briscoe*	*Auburn*
Peerless	*Pathfinder*	*Service Truck*
Marmon	*Cadillac*	*Metz*
Haynes	*Cole*	*Hudson*
Studebaker	*Premier*	*Lexington-Howard*
Kissel	*Chalmers*	*Rauch & Lang*
Autocar	*White*	*Apperson*

Lippard-Stewart Motor Truck

Some of the axles that use Thermoid Brake Lining are:

Timken-Detroit	*Russell*
Columbia	*Empire*
Peru	*Hess*
Sheldon	*Celfor*
Torbensen	*American*

Why *experts* select Thermoid Brake Lining

These car makers and their engineers select Thermoid Brake Lining because they find by scientific tests that it gives consistently efficient SERVICE. They find its "co-efficient of friction" is ideal for a brake lining.

This means its entire construction is such that brakes equipped with Thermoid Brake Lining cannot grab or slip, no matter how thin Thermoid becomes throughout long usage.

A grabbing or slipping brake lining is a constant source of danger to the motorist.

Three tests that prove Thermoid Brake Lining's worth

Thermoid Brake Lining proves its superiority in passing all three drastic tests by which brake lining efficiency is determined.

Coefficient of Friction Test—Whether brakes act promptly and smoothly depends on the wearing surface of the brake lining—i. e., its coefficient of friction. Thermoid Brake Lining's coefficient of friction is found by test to be ideal—not too low to slip; not too high to over-grip.

Absorption Test—Tests show that Thermoid Brake Lining does not absorb water, gasoline or oil. Loosely woven linings do, which causes them to swell and grab. This moisture-proof feature means Thermoid is efficient in wet weather or dry.

Durability Test—Tests show that Thermoid Brake Lining wears longer than ordinary lining. Also, it wears down uniformly.

Scientific construction of Thermoid Brake Lining

The reason Thermoid Brake Lining has the ideal coefficient of friction, is impervious to moisture, and is durable, lies in its scientific construction. In its process of manufacture it has three exclusive features:

1. It has 40% more material by actual weight.

This means longer service—best service. Thermoid is 40% heavier than any woven brake lining not hydraulically compressed. That is why it is better fitted to stand the responsibilities placed on it.

2. It is Grapnalized

Thermoid brake lining is impregnated throughout with Grapnal. This exclusive process makes it impervious to gasoline, oil, water, dust, etc. No other brake lining is Grapnalized, or can be. That is why ordinary brake lining goes to pieces rapidly.

3. It is hydraulically compressed

Powerful hydraulic presses compress Thermoid into a solid mass. This makes it far tougher and stronger than loosely woven linings not hydraulically compressed. It makes the wearing surface ideal for braking; it can't grab and it can't slip. The "coefficient of friction" is just right.

Specify Thermoid

When you reline your brakes, specify the brake lining the experts specify—Thermoid. Jobbers, garages, and dealers will be glad to supply you.

Remember your life depends on the efficiency of your brakes, and the efficiency of your brakes depends on your brake lining. Be sure *your* brakes are lined with Thermoid Brake Lining. The cost is a little more—and well worth it.

Our guarantee—

Thermoid will make good or WE WILL

two days journeying to and from the railroad station; on the third day he went to Dunning.

"Horatio," he said, "I can't sit round like a bump on a log for three months waiting for the skies to fall. I want to keep busy. So here's a mortal thought: We're going to form a young corporation, you and I. You put up three thousand dollars and I'll put up the scheme, and we'll split. There's about two hundred per cent a year in it."

"The overture listens great," said Dunning. "What's the rest of it?"

"Cheap taxi service," said Benham. "Twenty trains in two days—ten a day—that's all I met—took on over two hundred passengers and left three hundred. About one-tenth of the aggregate—mostly drummers—either came in one of those mossy hacks, or went away in one. There's only two or three cars at the station, and they're all frowsy and make funny noises. Nobody wants to ride in a hearse. We can buy six flivvers and get more if the volume of business warrants it. And I'll amuse myself superintending the thing as long as I have the time. You see, I hate to loaf, Horace. I've got to keep moving. This is picayune, but I always believe in picking up a dollar when I see one loose."

"You're on!" said Dunning. "We've needed it for an age. Only you'll have to watch the lid. I'm too busy to give it much attention."

"I'll take care of it," promised Benham. "That's why I want you to provide the cash. I'd go in even with you on that, too, but if I'm to handle the details . . . And I thought we'd begin as a partnership and incorporate on the wing. We can get a couple of inclosed cars for instant delivery and have 'em running next week, if you say so."

"Go as far as you like," said Dunning. "I knew you'd wake us up. Want my check now?"

"Gratefully received," said Benham, stowing it away.

And a week later a brisk service was in operation, and Benham, who had dreamed of royalty in New York, beamed at the certainty of velvet in Iberia. With the cars in commission and a tiny office in charge of the most dependable of the superseded hackmen, Benham cast about him again for more sinecures.

"Why, Hod," he said in amazement to his friend, "Iberia's been shooting ahead so fast that it hasn't had time to do anything properly. I was hunting for a better garage for the taxis. Do you know that in a town with swarms of high-grade mechanics working in the factories, there isn't a satisfactory garage anywhere? There isn't storage room or service. There isn't a place where you can buy unadulterated gas. They rook you on repairs and steal your tools in the bargain! And, by gosh, there's only two or three motor agencies! You could make one Iberia transportation company a fifty-thousand-dollar affair, build a three-story brick garage, give good service and repair work, take on a line of accessories and cars—one small car, one selling at about a thousand dollars, and one big one—and coin money! There're twelve hundred motors owned within a radius of five miles from the town hall and ——"

"If you and I are in it," stated Dunning, "we can raise fifty thousand dollars by dusk. Well, if you can show me the figures, I'm with you!"

And before the banking merger required Benham's undivided zeal, he had involved himself in a sanitary market, a string of model tenements, a motion-picture theater, and a campaign to construct a new and modern hotel to replace the antiquated Mansion House. In each of these enterprises he posed as the tireless and foresighted promoter, who contributes mentality instead of currency and, in each of them, he received the promoter's reward.

He plotted out the general scheme and the details, he visited the local capitalists and, by the appearance of great willingness to subscribe himself, he obtained fat pledges of subscription and never had to confirm his own; and for his pains he owned stock which cost him nothing but the loss of a few hours' sleep. He had small but welcome cash bonuses, he held titles and held claim to pleasant perquisites. The fear of discovery had virtually abandoned him; it mattered little whether or not the story of his New York disaster ever reached Iberia. He was a man to be pointed out on Main Street; he and Dunning were gradually coming to be regarded as a duumvirate foreordained to dominate Iberia; and the Courier-News adulated him openly, because it was no secret that he and Dunning intended, when the planets were in happy company, to buy the Courier-News.

And when he could spare the time from his so catholic activities, and the girl who had been his boyhood sweetheart returned from a protracted visit to the East, he arrayed himself as faultlessly as could be and went to call on her. Her name was Rosamond, and she lived in a pretty colonial house which, when he had seen it last, had roses all about it. And as he went up the walk, he was reminded, with a queerly bitter pleasure, of the fact that eight years ago, when he had said good-by on the veranda, she had given him a photograph of herself, and he had kissed it, and then kissed the original of it and vowed to write to her regularly and at length. And as he rang the bell, he was thinking of Miss Merrihew and wondering what she would say if psychically she knew his errand. Wasn't she the one who had made it possible?

Rosamond's mother, who had encountered him and congratulated him, and flattered him a dozen times on Main Street, and heroically refrained from rehearsing to him any of the anecdotes appertaining to his juvenescence, greeted him with fervent hospitality and left him tactfully. There was silence, faint rustlings of dainty fabrics; and Rosamond herself advanced to meet him.

Benham gasped at the numbing revelation. His boyhood sweetheart, who had been a delicious tomboy, a madcap sprite of witching color and ineffable, unquenchable spirit, had grown up too! Undeniably lovely she was, but the fire had gone out of her. Her manners were superlatively finished; her poise was that of a cosmopolite. As Benham wrestled for an appropriate sentence, he was conscious of having heard that Rosamond's father had been devoted to steel; that he, Benham, had been advised—he should have borne the tale in mind—that Rosamond had had a year or so at one of those exclusive palaces of education on the lower Hudson, that she knew Narragansett and Sulphur Springs as well as Benham knew Fifth Avenue. Yet he was staggered and nonplused and showed it by his awkwardness.

"Why Ernest!" She was shaking his hand, and Benham, congealed by the manifest reserve behind her friendliness, was tongue-tied. "I'm ever so glad to see you again! It's years, isn't it?"

"Eight," said Benham too loudly.

"Do sit down and tell me all about it! I haven't heard a word about anyone else since I got home! You're living here, aren't you?"

"Yes," said Benham, staring. "I've come home."

The unfamiliar Rosamond sank to a divan and shone brilliantly at him.

"I'm so glad," she said, "you came now instead of waiting. Another month or two, and you wouldn't have found us here. It's quite romantic, isn't it?"

"It surely is—but what's this about a month or two?"

"Why," said Rosamond, "it's our last season in the old house, Ernest. We're planning a real house up on the Heights. And we'll probably live in New York until it's built."

"Really?"

"Oh, we had to do it," said Rosamond cheerfully. "Nobody who is anybody lives in this section any more. It's quite plebeian. Of course I wish we could go to New York to settle ——"

"You do!" said Benham.

"Why, of course! Iberia's a horrid little dump!"

"It has changed," conceded Benham thoughtfully.

He was wishing that he had let his sentimental keepsakes rest in peace.

"Well, I wouldn't say that exactly. It always was horrid."

"It doesn't seem to me that we used to think so ten years ago."

"Why, I'm sure we did. Didn't you get away as soon as you could?"

"I!" said Benham aghast. "Yes, but that was different."

"How?"

He couldn't tell her that, when he had parted from her, his intention was to gather together the enormous sum of a thousand dollars and then to marry her as speedily as the license bureau would permit. That is, his intuitions shouted to him that she didn't care to be thrown back very far into the past.

Nu-Ex Fire-Killer

Instant Inspection

Opening on Side (gauge) shows exact quantity of our powerful fire-killing liquid Nuexolene. Nuexolene will not harm finest clothing, rarest woodwork, tenderest skin.

Pressure Indicator (gauge) shows exact measure of air pressure.

Automatic Action

Simple as **A B C.** Point the nozzle—turn the valve—shoots a straight, steady stream more than 30 feet. No pumping to destroy your aim.

You Know It Will Always Work

Now comes a fire extinguisher that you *know* will *always* work—the one extinguisher whose readiness you can inspect at a glance. For the Nu-Ex Fire-Killer is the *only* extinguisher with indicators (gauges). And these can never lie.

But these patented features are not the only superior advantages of the Nu-Ex. For the Nu-Ex is simplest in operation, easiest of control, surest of aim.

Note These Important Features

Visible gauge tells quantity of contents.
Visible gauge tells quantity of air pressure.
Simplest action. Turn the valve, point the nozzle—out goes the fire.
Requires no pumping (pumping destroys the aim).
Shoots a straight, steady stream more than 30 feet.
Nuexolene liquid is fatal to fire but harmless to all else.
Not affected by age; years can't diminish its strength.
Absolutely leak-proof.
Easily refilled after being used.

The Nu-Ex Fire-Killer embodies a combination of simple scientific principles and modern ideas which put it in a class by itself. Compare it with others. Judge for yourself. The Nu-Ex is completely guaranteed.

Ask your dealer to demonstrate the Nu-Ex to you. Or if he doesn't handle it write to us.

Send for our free book, "*Banishing the Fire Peril.*" It tells you in detail all about fire prevention and the Nu-Ex Fire-Killer. Surely the safety of your home, your garage, your store is worth it. Tomorrow may be too late. Fill in the coupon, mail it to us now.

"I've reformed," he said lamely. "I've seen the light."

"We heard that you were doing marvelously well in New York, Ernest. I can't comprehend how you'd ever like Iberia after that."

"The people have been mighty good to me here."

"I know, but even the best people aren't—what you might call eligible."

"Aren't they?" He was suddenly fascinated by the sparkle of a blue-white solitaire on the significant finger of her left hand.

"Why, yes," said Rosamond, detecting him. "A Yale man, Stuart Ellison, one of the Ellisons of Pittsburgh, you know. We've been engaged since March."

Benham murmured his felicitations and was inordinately restless. The pressure of memory weighed upon him and, although there was certainly no objection to prevent her from marrying anyone she liked, he would have been tremendously soothed if he could have found her a living verification of his sweetest of retrospections.

"Shall you live in Pittsburgh?" he queried.

"Oh, no," said Rosamond, not concealing her chagrin. "We'll probably live with father in the new house for a while. Stuart's going into business with father. What can't be cured! Ernest, come back to earth!"

Benham jumped and smiled in apology.

"I was just thinking," he said, "about that new house of yours. It's too bad it isn't finished now. I'd like to see you in it."

"Why?" she puzzled.

"Because," said Benham, "you're quite right, Rosamond. You belong in a house like that."

"This old hulk is growing seedy, isn't it?" she acquiesced, ignorant that in a few careless words she had destroyed for Benham the most fragile of his illusions and changed the orthography of the town for him. His pilgrimage to her had been frankly ardent, but wholly without guile. He hadn't expected to fall in love with her again. He had hoped that by reflecting the sunshine of the days gone by she could measurably brighten for him the æsthetic ugliness of Iberia. And she had merely added an initial letter to it. The letter S.

On countless occasions he had determined to write to Miss Merrihew, but invariably he was deterred by two considerations: One was that he had failed to reach her arbitrary standard of success; the other was that she had never responded to his wretched letter. And by degrees his former mood recurred; he said to himself that if, within a reasonable period, he achieved his norm of progress, he would go to her—and if not, he would have no justification and no chance to extenuate himself. He had never been taken off probation.

Then, in the growing rush of business, he ceased to think of her as an ambition crystallized, and focused his vitality upon the means to wealth. He worked slavishly, he made social sorties chiefly because of their commercial value, he glowed to his increasing power and repute. The bank consolidation became an actuality; and when the cards were laid upon the table, Kelly withdrew of his own accord and Saunders likewise, and Benham was promptly elected president—the youngest president in the state, perhaps the least deserving, unquestionably the most determined.

He was twenty-eight, but he looked to be over thirty and was pleased to be accused of thirty-five. And after the first intoxication had passed, he acted his part very well.

Now the original theory of Benham and Dunning had been founded upon a very evident demand for such a bank. Erected on a basis of necessity, it couldn't lack prosperity and growth. And this contingency, joined to Benham's additional triumphs as a merchandiser and a public carrier and a salesman, lifted him so swiftly to preëminence that Iberia rather stampeded in his favor. The chamber of commerce dined him, the merchants' association engrossed for him a vote of thanks, every minor association hastened to put itself on record and bestow its membership. And through it all, Benham still kept his modesty inviolate, because he couldn't expunge from the minutes of his metropolitan career that double default and the concomitant disgrace. To celebrate the exodus from the old colonial house, and to expose her fiancé for the delectation of Iberian society, Rosamond gave a week-end party in June. And to Benham, who was by this time her sole indigenous lion, she held out the tempting bait of wonderful and beauteous girls from out of town.

"There's one friend of mine," she said, "you'll be mad about. And you ought to be married pretty soon anyway, or you'll get gray on your temples and nobody'll love you. So you come early in the afternoon and get acquainted. Will you?"

Benham consented laughingly, but when the day arrived he was invited to such an important and remarkable civic meeting that, when he was finally able to reach his wardrobe, it was the dinner clothes that he selected. He arrived at seven and found himself marooned in a houseful of strangers, until Rosamond, perceiving him, took him in tow and led him to a group of young people in the living room. She gave the premonitory cough which paralyzes conversation.

"Helen," she said. "Miss Merrihew, Mr. Ernest Benham. Miss Keyes. . . . Miss Lockwood ——"

Benham was rooted to the pivotal point of a room which was revolving drunkenly about him. He heard none of the surnames which Rosamond had recited; he didn't know that he had dismissed the lordly fiancé with the curtest of bows. There in Rosamond's living room, in Iberia, a thousand miles from New York—there was the girl from whom, for love of whom, he had deserted Broadway between two nights. Her tremulous smile was a greater scourge to his vanity, a greater spur to his imagination, than he had yet endured; in all the universe he was perceptive only that she was there and that she was smiling at him. Miraculously the group had moved apart, and Benham and Miss Merrihew were side by side. And then she spoke:

"It's rather a long time—between letters, Ernest."

"You didn't answer mine," he said hoarsely. "How did you get out here?"

"Why, Rosamond and I went to school together. I didn't know you lived here! And I did answer your letter."

"You did!"

"Surely. Couldn't you trust me for that?"

"But I never got it!"

"I'm sorry, Ernest. I wrote it. But after I ——"

"What did you say?"

"Ernest," said Rosamond in his ear, "I don't blame you, but you've simply got to come over here and be nice to Stuart. You'll let him go for half a second, won't you, Helen? I don't get engaged every day in the week, you know!"

The worst of it was that dinner was announced almost instantly, and Benham, to his unutterable torture, was four places removed from Miss Merrihew. He discovered that the girl he was expected to be mad about was a frosty damsel from Buffalo, and he was so thoroughly shaken and confused that he was frostier than she was. The dinner dragged interminably to a close; dancing was mentioned with violent enthusiasm; Benham made one efficient dash for Miss Merrihew, captured her and dragged her with him.

They wandered out to the rose garden, redolent with this year's perfumes and not less fragrant in Benham's retrospection. They paused at a silvery latticework, shadowed with luscious blooms, and stood there motionless.

"Well, I'll be ——!" said Benham brusquely. "Helen, do you know what day it is?"

"I've never forgotten," she confessed softly. "Just a year, isn't it? Ernest, why did you run away?"

"What else was there to do? I'd fallen down so hard—there wasn't any doubt about it. When did you write to me?"

She turned slightly from him, and he was fearful.

"After I wrote, I didn't send my letter—there didn't seem to be any use. What are you doing in Iberia, Ernest?"

"I? Why, I'm head of a toy bank and a few other little things. I've given up New York. And you may care to know that I've given up the idea of being a millionaire too!"

"That wasn't it, Ernest! Aren't you doing something to be proud of?"

Benham considered and suddenly laughed outright.

"That's funny!" he said. "I hadn't thought of it! Why, they're going to get city government next fall, and there's some talk of running me for alderman!"

"And—you'd—you prefer this sort of life to making your fortune in New York? You'd rather have these—these comparatively trivial things than—than have a chance of really big accomplishments?"

Benham's heart expanded to Iberia, which had received him, and welcomed him, and taken him to herself.

"You bet I would!" he said fervently.

Miss Merrihew faced him, and in the darkness he could see that her eyes were shining.

"Oh, Ernest!" she said. She put a hand on each of his shoulders and looked up into his face. "Oh, Ernest!" she said with a funny little catch in her voice. "I bet I would too!"

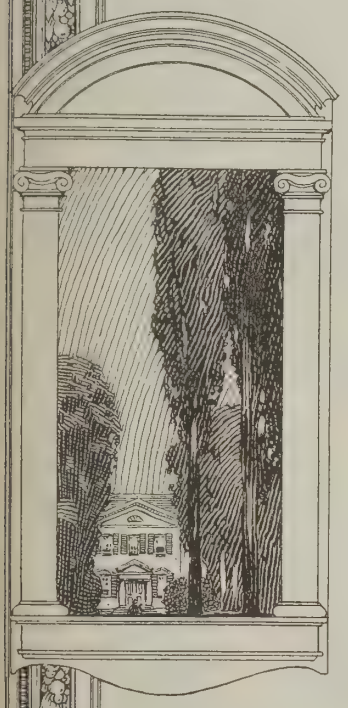
Vitralite

THE LONG-LIFE **WHITE ENAMEL**



WHERE people of worth gather, you will find Vitralite, *the Long-Life White Enamel*, on the woodwork. Comparison displays the mastery of Vitralite in chaste, white beauty. But time alone can show its greatest virtue — firm, dogged *endurance.*

That is why Vitralite is economical in the modest cottage as well as in the big "country home" or city mansion. Designed as the finest type of finish for the best *interior* work, Vitralite when put to test wears longer than ordinary paint on *exterior* work.

Whether you do "the little job around the place" yourself, or have a painter do your whole house, be sure it's Vitralite.

Vitralite may now be had in a number of authoritative modern tints.

"61" FLOOR VARNISH

IT has been said of "61" Floor Varnish that it "shows only the reflection," which not only emphasizes its beauty but also *implies* its durability. It is heel-proof and mar-proof.

Also, like any good floor varnish, "61" is waterproof, but its extreme resistance to wear distinguishes it from the ordinary kind.

A floor finished with "61" requires no care, other than an occasional cleaning with soap and water.

NEPONSET TWIN SHINGLES

(Patent applied for)

"The Roofing Development of the Twentieth Century"

Combine Extreme Beauty With Extraordinary Wear

Can you imagine a more handsome roof than this? Picture a roofing of Neponset Twin Shingles on *your* home.

The colors, form, size, and slate-surface of Neponset Twin Shingles make as handsome a roof as it is possible to find. They have the look of slate, laid in substantial looking large slabs. Their soft green and red colors harmonize with any surroundings or architectural plan. Read condensed paragraphs below.

Fire-resistance On a Neponset Twin Shingle roof sparks and flying embers burn out harmless. Most conflagrations spread from roof to roof. These shingles are a very great protection. They are approved by the National Board of Fire Underwriters.

Wear Tough felt, saturated with the best waterproofing material known (everlasting asphalt), then coated and recoated with crushed rock and asphalt, pressed and jammed into one thick, solid sheet. Similar materials in our famous Paroid Roofing are still giving good service on roofs laid 18 years ago when Paroid was new.

Cost Notwithstanding their great beauty and durability, Neponset Twin Shingles belong in the class of economical roofings. Their uniform shape and double width halve cost of laying, because two shingles are really laid at a time; and also lessen cracks and nail holes.

Five layers, six processes build up Neponset Twin Shingles into one thick, solid, inseparable mass, impervious to rain, sun, frost—undecaying and not affected by sparks or embers. Always remember "five layers, six processes."

There are three types of Neponset Shingles, meeting every requirement and pocket-book.

For factories, warehouses, barns, etc., similar material is furnished in rolls. It is Neponset PAROID Roofing—a roofing that for service has been unchallenged for 18 years. There are three types of Neponset Roll Roofing, meeting every requirement and pocket-book.

See the Neponset Dealer in your town. He can supply you with just the product you need—made and guaranteed by us.

WHEN WAR BRIDES MATURE

(Continued from Page 9)

extended and, even if the government estimates have been too high, that the potash produced there will compare well with that which has been imported in other years. The situation depends, of course, very largely upon the rapidity with which the kelp will grow again after cutting. But in any event we have more than enough potash in hand in San Diego Bay, as well as a practicable method of gathering and refining it, to make us independent of any other nation in the manufacture of powder.

Whenever one of our gifted young prophets feels called upon to write of the war of the future he brings Thomas A. Edison into his narrative. Edison at the critical time in the telling of the story steps forward with some marvelous device that holds the superior forces of the enemy in check, and sends them scurrying home, baffled and defeated. The fictionist does not have to go far into the realms of fancy to produce such a situation. It is entirely conceivable that a man who spent eight years in making the phonograph correctly aspirate the letter *h*—who made that great invention practical, as well as the electric light, the storage battery and the motion-picture machine—could be relied upon to be of incalculable aid to the nation in a time of stress. And it is significant that, during the critical days of February last, when war with Germany seemed only a few hours off, Mr. Edison retired to a secluded laboratory, on a mountain top not a hundred miles distant from New York, to give his entire time and thought and skill to working out his own ingenious plans for the naval offense and defense of the United States.

The Edison enterprises are hardly to be classed as war brides. Yet the stern necessity that shut them off from the importation of raw materials from Germany—particularly carbolic acid—drove their head toward meeting the critical situation, and meeting it without a moment of delay. He had become one of the largest individual users of carbolic acid in the United States. And, because there was none of this product coming oversea, he found himself in danger of being compelled to close his great factory.

That would hardly have been the Edison method of meeting a situation. It was his method to set to work at once to devise a plan for making carbolic acid synthetically, and having once devised the plan to set gangs of men at work, twenty-four hours a day, building a plant to make the acid. This was the method he followed. Within eighteen days after he had begun the construction of his new factory it was turning out carbolic. Within four weeks its output exceeded a ton a day; now it turns out seven times that quantity, and supplies not himself alone but an outside and clamoring commercial market.

Difficulties Overcome

The new plant was hardly at work, however, before Edison found himself confronted with a new difficulty. To make carbolic acid he found that he must have a continuous supply of benzol. The enormous demands of the European war were making the supply of this chemical uncertain. The inventor faced this new problem as he has faced every other problem—with a grin. He locked himself in his laboratory, sleeping nights upon one of its benches. When he emerged it was with complete plans for two benzol-absorbing plants, to be located at steel works in Western Pennsylvania and down in Alabama. Within sixty days each was turning out benzol for him, and the carbolic-acid plant stood assured of its raw materials.

"You Americans are up against an impossible problem," a distinguished German chemist told me only a few weeks ago. "You are trying to produce in two or three years what it has taken the brains and capital of Germany sixty years to produce and to perfect. Take your dyes: I understand that there is a concern in the United States which finally has produced a Victoria blue—which is a sort of basic blue. It charges eighteen dollars a pound for the product. Germany shipped it over here, paid a high duty, and put it on the American market for forty-two cents a pound."

"And when the war is over will she offer it to us for forty-two cents a pound?" I ventured. He smiled.

"I hardly think so," said he. "Commercial Germany, as well as military Germany, has learned many things during the present war. She hardly will be willing to let Americans have a dyestuff at forty-two cents a pound when they have been content to pay eighteen dollars for it. She will take a good profit, because she will need the money. But, even at that, she will undersell the American manufacturer of dyestuffs."

"The tariff?" I ventured once again.

He laughed, openly this time.

"You know the tariff history of your country in regard to dyestuffs," he said.

Indeed I do know a little of the tariff history of our country as it affects dyestuffs. Half a century ago—even less than that—the dye industry of our Hudson Valley was a growing and seemingly prosperous thing. It was apace with the dye industry of Germany. The possibilities of the aniline dye—the coal-tar product—seemingly so much wider, so much more efficient, so much more economical than the vegetable dyes, were just becoming recognized by chemists.

The Rise of American Dyes

In the long run the dye industry in the Hudson Valley, and elsewhere in the United States as well, ceased to flourish. It withered up and all but disappeared. A variety of reasons were given for its failure. The most logical one was the tariff. The "textile crowd" had seen to it that, while the tariff was kept high on woolens and other cloths, it was brought down to practically nothing on dyestuffs. In the mind of the textile manufacturer these were raw products. He brought congressmen to the same turn of mind. He showed them that, in an average year, dyestuff importations would not exceed nine or ten million dollars—a mere nothing as our importations go in some other lines. If he himself realized that the dye was the very keystone of the whole textile situation he said nothing at all of that.

Germany took no exception to this analysis. She merely kept enlarging her great dye works, perfecting and enlarging the use of the synthetic colors she brought out from the coal tar of the gas works of every one of her cities and towns; kept flooding America with dyes that were both cheap and good.

It was more than two years ago when the man who sells you shirts drew you to one side.

"You'd better stock up," he told you confidently. "They're running out of imported dyes; and no one knows what is to come after that."

He voiced an alarm that had been handed down to him by the jobber, and which, in turn, had come to the jobber from the manufacturer. The situation did, indeed, look serious. American dyes were both few and poor. They were not always to be depended upon. At the best, it looked as if we were in for several seasons of black and white, with none too large an emphasis upon the black; for sulphur black, practically indispensable in the dying of cotton, was an imported product; they were laboring to establish the popularity of the white sock and stocking.

It even looked as if the suspiciously pink cherry at the bottom of a nationally famous drink was threatened. And drugs, derived from the great coal-tar base, were threatened in the same way as the dyes. Those folk who had taken to dieting, and who were substituting saccharine for sugar, found that the new sweetener had doubled in price—almost overnight it seemed. Saccharine, as well as most of the other synthetic drugs derived from coal tar, was sold in bottles bearing the labels of American manufacturers; but the basic material from which the Yankee drug shops made their manufactured products came from Germany, almost invariably.

From the strictly commercial viewpoint, however, the dyestuff situation was the most critical. The industry, as we already know, was practically dead. A few dyes—most of them vegetable and of unstable quality—were being manufactured in the United States. The largest of all the plants in this country could not have been included in a list of fifteen, possibly twenty, of the world's largest dye manufactories. It began to look as though the textile mills

An Advertisement written and illustrated by Jim Henry, Mennen Salesman

Maybe you are an exception

Last year I wrote advertisements to a certain lot of men.

I wanted to reach those who *weren't satisfied* with their shave conditions; who were looking for something *better* in the way of soap and who were willing to try a new one.

More than a million of these men became users of Mennen's Shaving Cream.

This year I want to talk to an entirely different lot. I want to hear from men who *are* satisfied; who think the soap they are now using can't possibly be improved on.

I believe I can show you that Mennen's means a better shave than you have ever known. I may not be able to. Certainly I'm prejudiced. But there is a very simple way to find out.

If you are willing to risk a dime, I will undertake to provide you with enough Mennen's Shaving Cream for thirty full shaves.

When it gets to you, if you will try it and compare it; if you will squeeze out a half an inch, and with hard, soft, cold or hot water (it doesn't make any difference) work that half inch of cream into a lather—following directions *exactly*

If you don't find it a *better* lather, a *creamier* lather; if it doesn't soften your beard *quicker* (without any rubbing-in); if it doesn't make your shave *easier;* if it doesn't make your face feel better (both during and afterwards); if it dries before you are finished; if it takes more than a half inch of cream to do the whole job—

Then I'll agree that you're an exception; and the cream that is now making a million men thank Mennen, is not for you.

But until you *do* make this simple little test, I contend that you have no right to think you've got the best there is for you.

If this sounds like a reasonable proposition—there's a small coupon at the bottom of this page, to make it easy.

P.S.—And in addition to Mennen's Shaving Cream, let me also send a sample of Mennen's "Talcum for Men," it's skin color and don't show.

Jim Henry.

(Mennen Salesman)

MENNEN'S

SHAVING CREAM

JIM HENRY, House of Mennen, 1433 Orange St., Newark, N. J.

Dear Jim:—

Frankly I don't believe you've got anything better in the way of shaving soap than the kind I'm now using. But I'm willing to risk a dime to find out.

Send me a sample big enough for thirty shaves.

*Name*_____

*Address*_____

P. S.—Also send me free that sample of Mennen's "Talcum for Men."

Character In Cravats

THAT subtle something that is so apparent to the eye, and yet so difficult to describe—cravat character—makes its presence felt in Cheney Cravats in a highly satisfactory degree. Satisfactory to the man who wears them and to the shop that sells them. The genuine are identified by the quality-mark "Cheney Silks" in the neckband.

GLIDDEN AUTO FINISHES

would have to shut down before the war was well advanced.

As a matter of fact, not one of them shut down. American ingenuity and American enterprise rose to the supreme test. To-day the largest of our dye factories is the fifth largest in the world, and there is in all Germany hardly one superior to it in equipment and technic. Equipped to turn out four million pounds of dyestuffs in 1914, it turned out three times that amount in 1916, and will even exceed this figure in the present year. This particular war bride is to-day an extremely prosperous lady. She deserves to be. For fifteen years she had a hard time of it—a steady monetary loss, if you please. Even before that time—as far back as 1883, when the specific duty of fifty cents a pound was arbitrarily removed by Congress—it had been a struggle.

My friend the German chemist shakes his head and blandly tells me that we Americans cannot see beyond the dollar in hand; that we are unwilling to shoulder a loss this year, and the next, and the one that comes after, for the inevitable profit of the future and the soundness of our institutions. It is a favorite criticism by Europeans. Yet for fifteen years preceding 1914, the concern of which I have just spoken lost at least one hundred thousand dollars a year in its endeavor to maintain the organization of one of the very few aniline-dye plants in the United States. It certainly had not lacked vision.

Three months after the war began it was turning out large amounts of direct black, direct blue, acid black, and a few of the most important colors, from a commercial point of view at least. To-day its color list runs the entire spectrum. But by its work and the work of its fellows the textile industry in America has been saved. Of course it has not been entirely a one-plant affair. One small dye-manufacturing concern, which has been in existence for a little less than six years, has suddenly become one of the great dye industries of the world. From a comparatively small workshop with fifty or sixty workmen, two chemists and two engineers, it has blossomed into a real manufacturing enterprise with sixty-nine buildings, covering some forty-two acres. To-day it employs a thousand workmen, thirty-eight chemists and twenty-six technical engineers.

Nor is this all. It is known to-day that a large part of Germany's object in equipping herself with gigantic dyestuff factories was because of her forehanded knowledge that in time of war they could be devoted to the manufacture of high explosives. All this was part of her scheme of industrial preparedness. It is a poor rule that will not work both ways. This one does. The gigantic new factories that America has built during the past three years for the manufacture of high explosives are quickly and easily adaptable to the making of dyestuffs, as well as other commercial chemicals. Buildings, machinery and workmen can easily be turned from the creation of great destructive agencies to ones that are helpful and constructive for man.

Tariff After the War

We hold the raw materials. If you have been accustomed to ride out through Western Pennsylvania in past years you could hardly have failed to notice the long rows of coke ovens, gleaming brightly through the night and throwing their radiance out against the countryside. To-day the greater part of those ovens are dark and cold. They were wasteful, inefficient. To-day the soft coal from the Pittsburgh district is hauled to Chicago, to Cleveland, even into metropolitan Pittsburgh itself. It is still burned for coke—one of the most valuable of all fuels for the manufacturer. But the gases that used to make a pretty picture for the nocturnal traveler upon the railroad now light hundreds of little homes and little shops, factories and street corners. And the coal-tar by-product, in past years cast on one side, has become one of the commercial treasures of America.

"How about this infant industry after the war?" you ask.

And I reply in but four words:

"How about the tariff?"

On that issue will hang the fate of the newest of our great industries; for dye making has already ceased to be an infant industry. Potentially, at least, through the possibilities of the conversion of explosive factories, it is to-day a giant. As such probably it will have to battle for its life at the end of the war. One manufacturer told me he would face an instant loss of a quarter of a million dollars if peace was declared to-morrow. But loss does not necessarily mean defeat. And the dye industry is prepared to battle in the halls of Congress before the hearings of the new Tariff Commission, in each of the great open arenas of public appeal.

It will have the backing and coöperation of the allied chemical industries that have sprung up with it during the past two years. Edison has done more than merely manufacture carbolic acid. Nearly two years ago he conceived the idea of helping out the textile and rubber industries of this country by making mirbane, aniline oil and aniline salt—all of them in great demand and previously imported from Germany. As usual, he quickly exhausted all the literature on the subject and then built his plant. By working his men night and day—as he himself works—he finished the factory in forty-five days. Among the products of this new plant was one for which he had a vital and immediate use. A small quantity, however, sufficed him. The rest of it he turned over to furriers, as the chief ingredient in their peculiar types of dyes. To-day the fur trade of the country admits quite freely that it was Edison who saved its scalp in the winter of 1915–16—to say nothing of the present winter.

Leatherless Shoes

All the manufacturers of explosives have sought markets for their by-products. One concern, using a million pounds of cotton a day at a single plant, has turned the residue after they have made their smokeless powder, into druggists' sundries—toilet cases, combs, hairbrushes, and the like—and into a substitute for leather. This last, in view of the tremendous demands of the Allies upon the nation's limited and steadily lessening supply of real leather, is of the greatest importance. At first it was most suitable for upholstery, particularly the upholstery of automobiles. Sixty per cent of the cars in use in the United States to-day are upholstered in imitation leather. If they were not, there would have been a panic in the shoe trade two years ago.

But the manufacturers of artificial leather have not been content to stop their product at what are apparently its primary possibilities. They are already experimenting in the manufacture of shoes. To-day they can make a very good shoe, with the exception of the small pieces over the toes and just above the heel at the back of the foot—the two points where a leather shoe is subjected to hardest wear and greatest test. Eventually they will gain these points. The tire makers have evolved from some of their by-products a leatherless sole. The leatherless shoe—good-looking, durable, economical—is almost at our door.

The war brides of America have done a great military service for the allied nations of Europe. They may yet prove the military salvation of our own beloved United States. Yet even if they are not called upon to meet this supreme test, it can be said in future years that they opened a new industrial era for this nation. It will not be remembered that the United States, in 1917, found herself possessed of the greatest powder mills the world has ever known; that she held, in Eastern Pennsylvania, a steel plant whose capacity for making armor and huge steel guns is at least fifty per cent greater than the world-famed Krupp Works, at Essen; that her facilities for the manufacture of rifles and the other munitions of war were almost unlimited; but it will be said that in 1917 she found she had turned, from being merely a shopkeeper, a farmer, a miner, a machinist and a blacksmith, into being a great practical chemist.

Practical chemistry is the new factor in our industrial life. The war bride has given it to us. With the practical chemist come to his own in our commercial life, we are at last industrially independent. We have achieved the very greatest of all the steps toward industrial preparedness.

Irresistible Footwear Fashions!

Model No. 465—The "Lucerne." The white costume demands white footwear. This dainty pump is everything that a white pump should be—simple, yet smart, and perfect-fitting. Fashioned of white kid.

Model No. 466—The "Misipi." Visions of moonlight evenings, vine-shaded verandas and dainty summer frocks must have inspired this patent beauty. An exceedingly graceful model.

Model No. 476—The "Ionia." Grey Shoes are still wonderfully popular—not surprising when the designer can still achieve such an unusually charming boot as this. The curve at the instep is a new touch.

Model No. 479—The "Thelma." Every spring, with daffodils and "dark blue suits," come Tan Shoes. And every year they grow more charming—as this boot of tan kid with ivory top will testify.

Model No. 480—The "Saranac." Heel, quarter and top of grey ooze and vamp of glaze kid—a combination, the charm of which you'll have to see to appreciate.

These and many other equally charming models are ready at the Red Cross dealer's in your town—each one with the wonderful "bends with your foot" comfort. Go see them. Try them on. Red Cross Shoes are sold everywhere at popular prices, depending on styles and materials, each model the standard of value at its price.

WHEN YOU TRAVEL RIDE IN A— Pullman

Four Passenger Roadster

A roomy car for four passengers—divided front seats with lots of space in the rear, wonderful riding ease, typical Pullman pulling power—the smartest model offered in its class for 1917.

$860. F.O.B. Factory

DON'T buy the picture. Efficient buying means comparative buying. Purchase your car that way. For your own protection compare the "dozen reasons why" on this page with the specifications of any car on the market selling under $2000.

Then 'phone the dealer in your town and have him show you just what we mean by Pullman performance—what the wonderful Pullman motor can do in the way of hill climbing, what perfect carburetion and ignition mean in the shape of consistent pulling ability. The proof of the Pullman is in its performance.

Get behind the steering wheel of any Pullman Four yourself. Feel the luxury of the big, roomy body, with its ample leg space, genuine leather plaited upholstery and extra deep cushions. Feel the comfort of riding over 50½ inch full cantilever springs—generally offered only in high priced cars.

Add to this certainty of performance the greatest collection of standardized, expensive accessories ever furnished a car in the eight hundred dollar class, and you have the utmost value possible.

The finish of every Pullman model is superb, made perfect by eleven operations of sand blasting, coating, painting and varnishing. The lines are the latest and smartest, the hit of the big national shows this year. Fourteen years' experience stands behind the Pullman warranty, vouched for by thousands of satisfied owners.

Write for our literature.

A DOZEN REASONS WHY

- 114 inch wheel base.
- 50½ inch full cantilever rear springs.
- Four cylinder, L-head motor, 32 h. p. by actual brake test.
- Two-unit starting and lighting equipment.
- Stromberg carburetor, new type float feed.
- Genuine full floating rear axle.
- Thermo-siphon cooling system.
- Equalized brakes with Raybestos brake lining.
- Seventeen gallon gas tank in rear, Carter vacuum feed.
- Genuine honeycomb radiator—extra large tank.
- 31 x 4 inch, red wall, Firestone non-skid tires on all four wheels.
- True stream line, custom-made body, Pullman green and black, with real leather plaited upholstery and extra deep cushions.

THE NIGHT OF THE DUB

(Continued from Page 14)

Homer could make nothing of the mystery. He was returning from his third fumingly fruitless interview with the ticket taker when he saw a heavy-set man in evening dress bear threateningly down upon the marooned fifteen. Even as he recognized Reggie Ganz he heard the boss' hectoring voice demanding of poor little Mrs. Threbble, whom Ganz had instinctively singled out as the smallest and meekest and shabbiest member of the party:

"Now then, what are you ladies doing here? This theater is engaged for the night by the Harle University Alumni Association; and ——"

"You'll have to ask Mr. Twitty about all that," spoke up Mr. Belding right sourly, as Mrs. Threbble visibly shrank into herself at the experience of hearing herself addressed by a strange man. "He's supposed to be managing this affair. He ——"

"Managing what affair?" railed Ganz, on whom the phrase "Managing this affair" had much the same effect as might a rival's battle crow on a pugnacious gamecock. "Managing what affair? Who?"

"Homer K. Twitty," ventured Mr. Threbble conciliatingly. "And we are the Thursday ——"

"Twitty?" growlingly repeated Ganz. "Twitty?"

The name sounded familiar. And as he glared about in search of its bearer he discovered that unhappy creature at his elbow. At once Reggie understood why the name had had an accustomed ring. And now that something tangible had appeared out of the muddle, the great man's brow cleared.

"Oh, it's you, is it, Twitty!" he bullied. "What's the meaning of all this? Speak up!"

"Why, Mr. Ganz," faltered Homer, involuntarily cringing from long habit at the crack of the driver's lash, "I—we—that is ——"

"Mr. Ganz?" cheerily exclaimed Mr. Threbble, catching eagerly at the name. "Not Mr. Reginald Ganz, of Ganz, Ganz & Sons? Good! That's mighty good news! We've heard so much about you from your friend, Mr. Twitty, here, that we almost feel as if we ——"

"Twitty!" boomed Reggie, unhearing and heedless of the audible flutter of relief and admiration from the group at mention of the puissant Wall Street name. "You people will have to get out of here. Your seats were sold to you by error. We have taken over the whole house. I'll personally make good to you on the price if the management won't. Hand them over! There are forty men waiting a chance to buy them in."

He stretched out his ample white-gloved hand with the gesture of a victor who receives the conquered city's keys. The glower was gone from his rubicund face. This last obstacle was to prove no obstacle at all. Providence mercifully had put the missing tickets into the shaky fingers of one of his own slaves. Being nearsighted—except in the eyes—he did not remark that Homer K. Twitty's face had flared beet-red and was now yellow-gray. Neither did he trouble to observe that Homer K. Twitty's slightly recedent chin had crept forward below a suddenly compressed mouth.

For the first time Homer K. Twitty, invertebrate Wall Street clerk, and Homer K. Twitty, Pompton Plains finance captain, had met. The meeting was a clash, compared with which the fabled battle of Jekyll with Hyde was a listless slapping bout.

Reggie Ganz was the boss. The Big Boss, at that. The Big Boss of Ganz, Ganz & Sons. In which capacity he stood second only to God in the control of his employee's destiny. The Big Boss had just given Homer an order—an imperative order. The whole ignoble army of wage mendicants know, to a man, that disobedience to an order of the Big Boss is the automatic death sentence of the job.

Behind Homer, in this foyer corner, were assembled his social universe, his home, his personal future. He had heard the multiple wordless gasp that had greeted Reggie Ganz' sharp command — the command whose voice and wording were those of master to servant. Assuredly not those of a magnate to his equal and business chum. Homer's beloved edifice of neighborhood prestige was tottering above its shaken foundation stones. At any minute now it was due to collapse into unrebuildable ruin.

Worse, far, far worse, his adoring wife was looking on with widely incredulous eyes—he could feel their scared gaze—while her hero was kicked from his pedestal and was rolled ki-yi-ing into the gutter. Homer might henceforth dodge the new contempt of his old admirers; but he must live for the rest of his days with his pitifully disillusioned wife.

In that single brief instant he mentally drew up the debit and credit sheets, balanced them, and noted the result. And, acting on what he read there, he coldly proceeded to commit job suicide. Not that the act did not scarify him to the inmost soul; but he did it on the principle that makes a fire-trapped hotel guest shoot himself rather than burn to death.

"Hand them over!" repeated Reggie. "I have no more time to waste."

"Mr. Ganz," answered Homer K. Twitty, marveling at the steadfastness of his own dead voice. "I make allowances for your bad temper. It has let you forget that I'm a friend of yours. But you can't ride over me like this. I bought these sixteen tickets for the Pompton Plains Thursday Night Duck Pin Bowling Club—and wives. I paid good money for them. They entitle us to see this show. These ladies have come all the way to town to see it. And they're going to see it. If that fellow who takes tickets won't let us in I'll call a cop to make him do it. Get me?"

Balaam, of old, is credited with some momentary surprise when his saddle ass undertook to argue with his master in human voice. But it is doubtful that the ancient prophet's amazement excelled Reggie Ganz' at this unbelievable language from an outer-office clerkling. For nearly a second it struck Ganz speechless. Reggie improved this tiny interval of silence in trying to stare his revolting serf out of countenance. But Homer K. Twitty's desperation-glazed eyes met his boss' scowl without a flicker of dread. His job was lost. He knew that. And, being without hope, he was very naturally without fear, since neither of those two counterbalancing traits can exist for a moment without the other. Vaguely Homer wondered at his own stark bravery.

"Get me?" he repeated hoarsely. "I bought these tickets. They entitle me to sixteen seats in Row N. And I'm going to use 'em!" He yearned morbidly to add "You big stiff!" But he refrained, through notions of delicacy toward the palpitatingly listening women of the party.

From the corner of his bloodshot eyes he noted the tense eagerness of the fifteen delayed revelers as they listened to this verbal combat between the two Wall Street giants. Already his sacrifice was almost worth while.

Twice Reggie opened his mouth to speak, but only gobbled. He, too, was aware of the regard—the grinning regard—of friends. His hard-won prestige seemed at stake. And something told him that mental prowess, not mere bullying, must be his cue.

As Hercules held Antæus high in air, that the giant might be deprived of the Earth's reviving force, so Reggie now proceeded to detach Homer K. Twitty from the dowdy women before whom the little man was showing off. His hand almost lovingly on the rebel's shoulder, he drew Homer out of earshot of the rest.

"Look here, Twitty," he began in a bluffly friendly manner: "you'll do me a big favor by letting me have those seats. Hand them over, like a good chap. I'll pay you for them, of course. And I'm sorry to inconvenience your party. But ——"

"You needn't be sorry," said Homer doggedly, "because you're not going to inconvenience us at all. I'll see to that. We're going right in."

He made as though to turn back to his friends. But Reggie detained him—resisting with difficulty an impulse to grab his collar and shake him.

"Hold on!" pursued Reggie. "These ladies with you—I suppose they would hardly care to hear some of the jokes and one of the songs that are to be pulled off here to-night? The stuff is pretty raw, in spots. Not quite the sort of thing to bring respectable women to, you see."

Homer's heart slumped to his kneecaps. This was the ultimate blow—the climax of the evening's failure. After fighting his party's way into the contested seats, the ladies were to be insulted by jokes and songs for which they would everlastingly blame him! He was responsible for the choice of the show. Well, let them blame him! Let them! He wasn't going to back down now.

"That's up to you, Mr. Ganz," he heard himself say. "If you choose to subject decent ladies to an indecent show—you and the rest of Harle University—I can't stop you. We're going in."

Reggie had a vivid mind picture of the attitude the better element of the alumni would take toward those cherished gags and verses if the spiced quips were delivered in the presence of several patently good women. It would not redound to his own personal credit or skill at management.

"Wait!" he begged, again detaining the peripatetic Homer. "One moment, please. I ——"

"And while I'm waiting," flashed Homer, "please take your hand off my shoulder. I hate to be pawed."

"Twitty," said Ganz coldly, "I think you forget yourself."

"Maybe I do," growled Homer. "Let it go at that. What was it you wanted to say to me? Speak up. I'm in a hurry."

Whereat Reggie Ganz took the next to lowest step an employer can take.

"Twitty," he cooed persuasively, "just oblige me in this, like a good sportsman, and I'll see you don't suffer for it next pay day."

"Good-by!" was Homer's brusque retort to this lure.

And Ganz proceeded forthwith to the lowest step of all.

"If you can't see your way to obliging me in this, Twitty," he said somewhat deep in his throat, "next pay day may be your last with Ganz, Ganz & Sons."

"Is that so?" sneered Homer, white-mad. "Is that so? Well, Mr. Reggie Ganz, of Ganz, Ganz & Sons, your—your face don't fit you!"

Yes; it was bitter repartee. As bitter as it was scintillant. But the bully had brought it on himself by his dirty threat. Homer, at heart, was dazzled and dumfounded by his own suddenly discovered genius for brilliant retort. Not wishing to spoil the effect by anticlimax, he snapped "Good-by!" once more and turned toward his staring friends.

A little to his astonishment, Ganz did not smite him to earth; nor did the lightnings of heaven punish his boss-blasphemy. Instead, Reggie choked back a whole mouthful of words and barred Homer's return route.

"One minute now, Twitty," he urged. "I don't blame you for being hot under the collar. I was a bit caloric myself. And I'm sorry I spoke as I did. But surely, between two business men, there must be some easy way of settling this. Let's talk it over sanely and see whether we can't get together."

"Get together!" The catchword brought back to Homer a scene—reported by Reggie's discharged stenographer to a clerk who went to the same Christian Endeavor Branch with her, and repeated, in turn, by the clerk to Twitty and several others—a scene wherein Reggie Ganz had used that same phrase in the same wheedling tone to a man whose stock he wanted for the control of the C. G. & X. Line. And, with the recollection, a sublime idea popped full-grown into Homer K. Twitty's blazing mind.

"Get together!" he rasped as nearly as possible in the tone of an admired Wall Street demigod. "Get together, hey? Now you're talking! What's your proposition? Make it brief."

Reggie should have been past all faculty of wonder by this time. Yet he stood gazing open-eyed at the worm transformed to a dragon.

"Well," he began uneasily, "since you've cornered me, I don't mind giving you double money for that set of seats."

"Double money!" scoffed Homer. "Forget it! Look-a-here, Brother Ganz; when you wanted to get control of the C. G. & X. for your principals you paid through the nose for the blocks of stock you had to buy in. And you've got to do it now! See? I own sixteen shares of Theater, Preferred. Here are my sixteen stock certificates. See? Now you've got to have those shares if you're going to control this performance. See? You've got to have 'em! And you offer me a measly 'double money'!"

"But listen, man alive! I ——"

"I've been listening!" harangued the inspired Homer. "I heard your offer. And I turned it down. Now it's up to you to

listen while I put my terms. Get that, Mr. Ganz?"

"Well?" replied Ganz. "State your fool terms, then. What are they?"

"I—I don't know yet," confessed Homer, trying to think and talk at the same time. "Wait a minute."

"I've no time to wait!" snarlingly protested Ganz. "The curtain goes up in ten min——"

"I've got 'em!" proclaimed Homer. "I've got 'em! Now listen! You'll have the manager, here, phone and reserve four boxes—boxes, you understand—for to-night's Pinafore performance—boxes that hold four people each—right close to the stage. That's the first thing. Then you'll send for four taxicabs to take us there."

"And, of course, you'll want supper afterward?" suggested Reggie in elephantine sarcasm.

"I—I hadn't thought of that!" exclaimed Homer. "But you can bet we will! Thanks! Supper for sixteen, after the show. And taxicabs to take us there and afterward to the ferry. Four of 'em! And no measly hand-out supper, either! A swell feed! At—at ——"

Homer racked his fevered memory for the name of some impossibly fashionable supper resort. The Waldorf-Astoria occurred to him. But he was not certain a regular hotel's restaurant would be open so late as eleven o'clock, and he did not want to risk Ganz' contempt by asking.

"Delmonico's!" he said suddenly, falling back on a name he had heard from babyhood. "A supper at Delmonico's. Not less than two dollars a head, either."

"Is that all?" patiently queried Reggie.

"Not quite," answered Homer, emboldened by the other's unwonted meekness. "You spoke pretty raw to me just now before my wife. I want you to come back to our crowd with me now and be introduced to her, and say you're an old friend of mine. That's all!"

For perhaps half a minute Reggie Ganz stared inscrutably at the bargainer. His own eyes were dull, but not with stupidity. It was the look that always stole over them when he was sizing up an opponent. With all the criticisms of his many and various faults, Ganz' almost uncanny power of reading human nature had never been questioned. Presently he said:

"Taxis to theater; from theater to Del's; then to the ferry. Four four-seat boxes for Pinafore. Supper at Del's. Introduction to Mrs. Twitty. That's all? You're sure?"

"That's all!"

"You're on!"

Homer fought to keep his face impassive. His was a once-in-a-lifetime victory.

"Now that's settled," resumed Ganz. "Just hand over those sixteen seats, will you? I've paid a gilt-edged price and I want them."

"No," refused Homer, recalling another anecdote of the Street; "I guess I'll hold them as collateral. You see, something might slip up or you might forget part of your contract. And then we'd all come back here and use 'em. You can put other folks in our places till then if you're a mind to. But I'll just hold on to the seats."

"Huh!" barked Reggie. "How do I know you'll keep your share of the bargain, then? Why should I trust you when you won't trust me?"

"Because you've got to, I guess," said Homer simply. "Come on, now, and meet the wife. Then you can send for those taxicabs and phone to Delmonico's, and have the manager, here, phone to reserve the four boxes."

Homer K. Twitty next morning accorded a groan and a bleary succession of blinks to the whole-souled clangor of his alarm clock. It was cruelly hard to get up and go to work after such a night. Such a night! From the moment Reggie Ganz—game loser!—had bowed before Bertha and said how glad he was to meet the wife of his dear old friend—from that moment until the four taxis deposited the returning revelers at the ferry, barely in time to catch the one-ten A. M. train, the evening had been one of inconceivable radiance. Never in all the annals of Pompton Plains—to say nothing of the comradely annals of the Thursday Night Duck Pin Bowling Club—had there been such an Occasion.

Homer's very sweetest memory of it all was a little speech Mr. Threbble had made just before the party broke up. After a whispered consultation with the other men Threbble had cleared his voice and said—Homer remembered every golden word:

"Ladies and gentlemen: I know I am speaking for you all when I tender a vote of thanks to our fellow member, Mr. Homer K. Twitty, for the happy time he has given us to-night. Without Mr. Twitty's financial genius, ladies and gentlemen—and without his close friendship with Mr. Ganz—such a night as this night would have been impossible. And at no extra cost! I think I am betraying no confidence," Mr. Threbble had concluded roguishly, "when I tell you that, on my resignation next month, the name of the next president of the Pompton Plains Thursday Night Duck Pin Bowling Club will be that of our distinguished fellow townsman, Mr. Homer K. Twitty!"

And everybody had rapped applaudingly on the table. Great was Homer K. Twitty! But now next morning had come. Last night had been the Night of the Dub. To-day was the Day of the Boss.

Homer was of two minds about going to the office at all. More dignified it would be to drop out of his job without going in person to be fired. But highly needful it was to clear his desk of the belongings he could ill spare. As he drearily shaved at the bathroom window he heard a rug beater in the adjoining yard enlivening his castigating labors with song. And the burden of the thump-punctuated ditty was "Last Night Was the End of the World!"

Reggie Ganz fared officeward that morning with a reluctance as great as Homer's, but from a wholly different cause. Ganz merely disliked the thought of banishing a glorious dream by a day of work. His head ached, and his mouth was dry and furry and full-flavored. But in his heart was a great peace. In his ears still tinkled the sweet echoes of a thousand-voiced banquet chorus whose words set forth in no uncertain terms the statement that he, Reggie Ganz, of Ganz, Ganz & Sons, was "A-jolly-good-fellow-which-nobody-can-deny."

Also, his song had been sung and resung, not only at the theater but afterward at the banquet. A dozen fellow alumni had chucklingly jotted down its words at his dictation. More than one prominent man, during the meal, had been spirituously moved to declare that no one but Reggie Ganz was a fit candidate for next president of the alumni body. Reggie's happily aching head was fairly abuzz with adulation. His thick shoulders were sore from slaps of good-fellowship.

Up the steps of the Ganz Building he made his way. And at the outer entrance he all but collided with a pasty-faced man who was emerging with an enormous paper-girt bundle under his arm. Homer K. Twitty had sought to take time by the forelock by clearing out his desk and departing before the Big Boss' arrival.

Despite this, now, as last night, he had nothing to hope or to fear from his employer. And he met Reggie's dreamily happy eye with the profound calm of a Yogi. Starvation might lie waiting round the corner. At the very best, temporary joblessness was his certain fate. But at any rate, this particular Big Boss could no longer hurt or help him.

"Hello there!" hailed Reggie, stopping short.

"Hello!" was Homer's gruff reply; and he added: "I'm in a hurry."

"Have a good time?" went on Reggie.

"Yep. Fine! Did you?"

"Did I?" repeated Ganz. "It was One of Those Nights! Where are you going?"

"To leave this stuff at a Subway package stand and then look for a job."

"A job, eh?" queried Reggie. "What's the matter with the one you had? Couldn't you get on with the Boss?"

"Nope!" said Homer in like vein. "We quarreled over a stock deal. And I quit—to keep from getting fired. So long!"

"I don't blame you," sympathized Reggie. "Rotten place to work—the outer office. But, queerly enough, I've been thinking I could find something to do in the inner office for a chap who has brains and sand enough to hold up his own boss for his own terms. Want to come in and take a look at the new job?"

"Th-thank you, sir!" bleated Homer K. Twitty, panic-fear rushing back into his soul along with the surge of golden hope. "Oh, thank you! And—I'm sorry I spoke so rude to you last night."

But, by grace of one remaining shred of self-control, he said it all to himself, and not aloud—gallantly mustering up strength to vocalize the two stranglingly careless words: "You're on!"

SAXON $495

Lowest-Priced Car with These Costly Features

Electric starting and lighting system, two-unit type, built by Wagner
Demountable rims
30 inch by 3 inch tires
High-speed Saxon Continental Motor
Reichenbach carburetor
3-speed transmission
Dry plate clutch
Hyatt Quiet bearings
Streamline body
Honeycomb radiator
Atwater-Kent ignition
Extra long vanadium steel springs, cantilever type

This new series Saxon Roadster is completely equipped with every modern motor car feature. It has a 2-unit electric starting and lighting system built by Wagner—the finest that can be purchased. So there's no cranking to be done. Simply press a button convenient for your heel and your motor is running. And you are always certain of full-shining lights.

Next among the added attractions is its new-style body. The design is of the newest mode. The body is larger with greater roominess and added seat space and leg length.

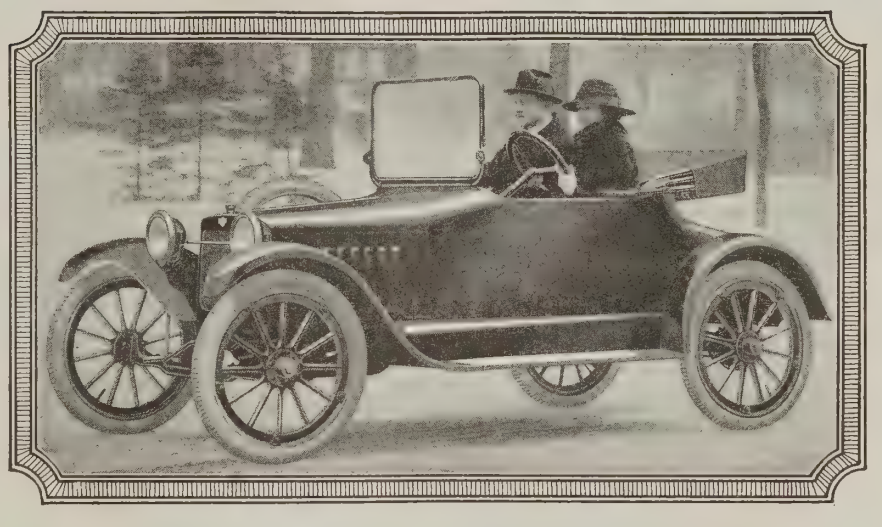
With thought of further comfort for you, demountable rims and 30 inch by 3 inch tires have been made part of the equipment. So in event of some tire mishap a change is readily made.

A new style top with Grecian rear bow enhances the outward attractiveness of Saxon Roadster. And among the further conveniences of equipment are an electric horn; extra tire carrier; speedometer; ventilating windshield; adjustable pedals; storm curtains; one-man rubber top and top cover.

And then see how this Saxon Roadster performs on the road. Note how smoothly the motor pulls "on high" or "in low," up hills or in toughest going. Note how quickly and lightly it responds to the wheel. Note the instant power-response when you touch the accelerator.

And beyond all this, Saxon Roadster has the added advantage of being **the world's low-cost car** to drive. It gives the most miles of satisfactory service at the least expense.

Here you will find letters from Saxon Roadster owners that tell in detail of the kind and quality of service this car gives them.



Says Saxon Roadster is unbeatable

"As for my Saxon Roadster—show me a car that can beat it. I can out-run and out-climb anything from a ***(higher priced car)*** down the line. Recently I persuaded ***(another low priced car)*** to race me by giving him a half mile handicap. The result was to put the ***(other car)*** in the ditch and my Saxon Roadster a half mile in the lead. I can throttle down to 2 miles per hour on high or speed up to over 50, and can prove it any day. I average 32½ miles to the gallon of gasoline and 125 miles to a quart of oil. This new series Saxon Roadster is certainly a 'bear.' For power, speed and endurance it cannot be beat."—F. P. PORT, Owasso, Okla.

200 miles for $1.32

"I have owned and driven my Saxon Roadster for two years. Repair bills have been practically negligible, it has never failed to give me thoroughly fine service. I have found it an absolutely dependable car. One trip I made this spring of 200 miles, over bad, winter-roughened roads, on 6 gallons of gasoline. Paid 22c per gallon—so the total cost of that trip was $1.32, or considerably less than a cent per mile. Another trip I made recently was for 165 miles—over slightly better roads. I used but 4¾ gallons of gasoline, by actual measurement. Your Saxon Roadster is not only a wonderful performer, but it is a wonderfully economical car."—RAY LESSIG (Address on request).

Resists hardest road abuse

"My Saxon car has always been faithful and dependable. I have driven it every day this winter, over roads that were deeply rutted and frozen as hard as iron, and the way it has stood up under all kinds of abuse is truly wonderful. One would naturally think any car would begin to squeak and rattle after such treatment, but my Saxon Roadster runs just as smoothly and silently as when I first got behind the wheel. In my judgment it has made a wonderful record, and you can be sure that my name will continue to be on the list of Saxon owners."—G. W. HUGHES, Armstrong, Ill.

Runs perfectly after 5200 miles

"Last Saturday I ran to Youngstown, Ohio, in my Saxon Roadster. It is a 64-mile trip, and half of the distance the roads were extremely rough. My exact running time was 4 hours, which is very good when road conditions are considered. The return trip was made in the same time. I used 5.5 gallons of gasoline and one quart of lubricating oil, and the car came home like a humming bird. I have driven my Saxon Roadster 5200 miles already, and it runs as sweetly and smoothly as any car could. It is certainly a wonderful car to drive and always rides comfortably. This car has given me less trouble than any car I have ever driven, and I have owned big ones of many kinds for ten years."—W. P. LUCAS, Oil City, Pa.

Saxon makes good with U. S. mail

"When it comes to rural mail service, Saxon Roadster is certainly the ideal car. It has ample room, utmost ease of control and light weight combined with sturdy construction. I missed but three trips all last winter, and then the deep snow made it absolutely impossible for any kind of conveyance. My Saxon Roadster has gone thru mud up to the axles, and over freshly graded roads and has never yet failed me. My wife drove over the route three weeks, and is just as enthusiastic over the Saxon Roadster as I am."—F. MANBECK, Marion, Md.

Calls Saxon ideal for women

"It might be of interest to you to know of a recent trip I made from Chicago to South Bend, and return. I had no idea that it was possible to tour with such ease and comfort and unmarred pleasure as it is with Saxon Roadster. The car worked simply beautifully, and I made the trip in 6 hours running time, averaging 28 miles per gallon of gasoline. I have had considerable experience with motor cars, and I believe that Saxon Roadster is an ideal car for women to drive, for it handles extremely easily and but rarely needs the slightest service attention."—CARRIE CUNNINGHAM, Chicago, Ill.

30 to 32 miles per gallon

"My gasoline bill is so low it is almost a joke. Recently I drove from Omaha—a distance of 108 miles—and I used only 5 gallons of gasoline. This is nothing extraordinary, for my average—as well as that of other Saxon owners I know—is from 30 to 32 miles per gallon of gasoline. Though owners of other cars may do considerable complaining because of the high cost of gasoline, Saxon Roadster owners cannot grumble. Saxon economy and service are certainly something to be proud of."—H. J. KELLY, Surprise, Nebr.

Costs less than $1 a week

"I wish to put myself on record as to the advantages of using a Saxon Roadster. I have made so many successful trips in this car, at such low cost, that I feel that I can not too highly recommend this car for the use of other ministers. I drive my car every day—looking after a large pastorate—besides attending weddings, etc., and my actual running expense is less than $1.00 a week. For a minister, or for any man who wants lots of service with rare trouble and little expense, I know of no car better than a Saxon Roadster."—REV. F. Z. BURKETTER, Greensburg, Ind.

"I wish to congratulate you on the great car you build in Saxon Roadster. After running mine over 5,000 miles, it does not show the least sign of wear, and is mechanically perfect. When it comes to all around service there is no car at anywhere near its price that can match it. My Saxon Roadster is good for 5,000 more miles and then some."—DOUGLAS SHAPE, New York City, N. Y.

Motor never heats or knocks

"I am the owner of a 1916 Saxon Roadster, and without doubt it is the best car I have ever owned. I have had several different makes, but my Saxon Roadster is by long odds the most satisfactory of them all. I made a trip of 100 miles the other day, and thought that I must need water, but on examination found the radiator practically full. My motor never heats or knocks, and I can climb any hill around here on high. In these parts a familiar slogan is—'You can't beat a Saxon.'"—GEO. McCRILLIS, Windsor, Vt.

Salesman enthusiastic over Saxon

"Early this spring I purchased a Saxon Roadster with full equipment, including electric starting and lighting system. I wanted to cover the southern and central parts of Minnesota and the eastern part of South Dakota with a line of merchandise, and I wanted to accomplish it as expeditiously and economically as possible. After considering all methods of transportation, and all kinds of cars, I finally came to the conclusion that Saxon Roadster was the best car from the standpoint of motor service, as well as the cheapest car to drive. What I believed then has been proved to me. As you probably know, the roads in this part of the country in the spring time are in a terribly bad condition, but my sturdy Roadster went right thru every obstacle, and I kept to schedule time without one delay. My starter has never failed to work, and I have never been towed in. I have absolutely nothing but the highest praise for Saxon Roadster."—GEO. F. COOKE, Minneapolis, Minn.

Saxon never gives trouble

"It is with real pleasure that I can inform you that my 1915 Saxon Roadster which I purchased just one year ago—has given me the best of service and satisfaction. I am averaging from 30 to 32 miles per gallon of gasoline, and I have driven the car more than 4,000 miles, over all kinds of roads and under all conditions of travel, and it has never given me any trouble. For the prospective buyer who is seeking a low price car that will give absolute satisfaction, I can truthfully recommend the Saxon Roadster."—L. E. KEPLER, Cincinnati, Ohio.

Averages 35 miles to gallon

"For complete service satisfaction my Saxon Roadster sets a standard. Recently I went from Bridgeport to Brockton, Mass., a distance of 175 miles, in 9 hours, averaging 35 miles to the gallon of gasoline. This is really a noteworthy performance when you consider that I carried a passenger and a heavy load in the car. Incidentally, there were a great many hills in this distance, but I experienced no trouble in making them 'on high'."—S. L. LOUNDS, Boston, Mass.

Shifts gears only 4 times in 200 miles

"I want to tell you about a recent run we made from Louisville to Frankfort to Winchester and return—the complete trip without a puncture or mishap of any kind, not once stopping for trouble, changing gears only four times in over 200 miles, then only at dangerous turns in the road. When one considers that the country here is very mountainous, one could not ask for any better performance."—J. GUY NEWIN, Louisville, Ky.

Saxon Roadster, $495; Saxon "Six," $865; "Six" Sedan, $1250; f. o. b. Detroit. Canadian prices: "Six" Touring car, $1175; "Six" Sedan, $1675; "Four" Roadster, $665. Price of special export models, "Six," $915; "Four," $495; f. o. b. Detroit.

Premier

The Aluminum Six with Magnetic Gear Shift

$1895 f. o. b. Factory

From Everywhere—the Same Consistent Story of Performance

George Morris of New York says: "C. F. Stoddard, mechanical expert of Knabe Piano Company, started his stock Premier touring car at bottom of Fort George Hill at two miles an hour and finished at twenty-eight in high. Demonstration wonderful."

Jim Levy of Chicago says: "In a fifteen-minute demonstration through traffic Premier completely overthrows any experienced driver's conception of what a good car ought to do."

Jack Leavitt of San Francisco says: "Jones Street hill, 28 per cent grade, one block long, climbed in second gear with five passengers. Premier's acceleration in excess of anything we have tried."

Frank Brown of Boston says: "Made sensational demonstration on Corey Hill covered with ice. With seven passengers Premier started from Beacon Street at ten miles, finished at thirty-five at top. Can climb Commonwealth Avenue hill in high at four miles an hour."

Harry Lance of Cleveland says: "Drove Premier No. 122 on January 24th from Cleveland to Detroit in six hours forty minutes, averaging twelve miles to the gallon, making own road through three to four feet of snow, pulling around scores of cars waiting for horses to pull them out."

G. T. Overholt of Pittsburgh says: "Started bottom of Turtle Creek Hill, eleven per cent grade, one mile long, at fifteen miles an hour, finished at fifty-eight. Can pick up from two miles to fifty in two city blocks. Premier's rear end stays on road better than any car I have ever driven."

Charles Schiear of Cincinnati says: "Premier topped Clifton Hill in high at thirty-five miles per hour from five-mile start. I don't think there has ever been a six that showed such ample power on Cincinnati's hills."

E. C. Eads of Kansas City says: "Premier climbed Hospital Hill in high at forty-three miles an hour. Took Reservoir Hill at a running start and finished at forty-five miles."

Gordon W. Kenney of Dallas says: "Premier's demonstrating performances never have been equalled under same conditions. Drove Premier from Fort Worth to Dallas, thirty-six miles, over soft roads, in fifty minutes flat."

M. Zilbermann of New Orleans says: "Have demonstrated Premier eight hours through traffic in high. Dr. Samuel, in Premier, is getting seventeen miles per gallon."

H. W. Pierce of Butte says: "Without changing factory carburetor adjustment Premier has out-demonstrated all cars on backbone of Rocky Mountains over a mile above sea level. Have sold 128 per cent of cars contracted for. C-H magnetic gear shift tremendous advantage on mountains."

F. T. Gannon of Buffalo says: "Premier climbs all hills in our section in high with ease. In six thousand miles average fourteen and nine-tenths miles per gallon and three tires have original air with only one puncture in fourth. We don't know what trouble is in Premier cars."

By the way, have you seen that little booklet of ours, "Premiering"? It is said to be the snappiest, most interesting thing of its kind that has appeared for many a day. A line from you will bring it post haste.

Meanwhile, ask for a test ride in Premier to-day.

A Thousand Million Sunkist Oranges

Consider that figure a moment!

The American public consumed last year more than one billion Sunkist Oranges.

Thus a healthful benefit, affecting millions of people, has been distributed broadcast under the name "Sunkist."

Eight thousand California growers, in a great co-operative, *non-profit* organization, for years have produced vast supplies of these *uniformly good oranges;* and, through truthful advertising, have told men and women about them.

These two facts together, probably more than any other influence, have widened the scope of this natural good.

* * * * * * * *

Are you serving these *tender, luscious, sweet, juicy* Oranges as often as would be best for *your* family?

Ask your physician. Then serve them daily,—at breakfast, luncheon or dinner. And keep a constant supply available between meals in a handy basket or bowl.

Miss Alice Bradley's Recipes

A valuable illustrated book containing 200 Orange and Lemon recipes by Miss Bradley, Principal of Miss Farmer's School of Cookery, Boston, Mass., will be sent *without charge* to housewives who answer this advertisement, giving their dealer's name and address. Send for your copy now.

Sunkist

Uniformly Good Oranges

Sunkist Oranges—practically seedless—are sold by all first-class dealers in varying sizes at varying prices, so all families can afford them. They cost no more than ordinary kinds. Buy them in clean, crisp, tissue wrappers and look for the name "Sunkist."

"Oranges for Health"

Kodak, as you go

Wherever the purr of your motor lures you, wherever the call of the road leads you, there you will find pictures, untaken pictures that invite your Kodak—intimate pictures of people and places that you and your friends can enjoy again and again as you thumb the leaves of your Kodak album.

And you can take them.

Ask any Kodak dealer.
